INTRODUCTION

The Capital Improvement Plan is a process by which the Village summarizes its multi-year plan for major capital expenditures. It provides an ongoing framework for identifying capital requirements and future financial impacts, the scheduling of projects over an extended period of time and strategizing for the most efficient completion of projects.

Generally, CIP includes improvements that are relatively expensive, non-routine in nature (excluding street and alley resurfacing) and have a useful life which often extends over several years. Such projects include but are not limited to new buildings, additions or renovations to existing facilities, construction of streets, water mains, sewer improvements, land acquisitions and major equipment purchases.

Due to the nature and total costs often identified for these types of projects, various funding sources are typically required such as operating revenues (in the form of an inter-fund transfer into CIP) or draw down of reserves, bank loans, general obligation bond issuances and grant proceeds.

Recommended capital projects are presented by both the type of improvement as well as the Fund responsible for managing and paying for the project. A CIP project is first categorized into one of the following types:

- Building Improvements #3012
- Fleet Replacement #3032
- Equipment Replacement #3029
- Main CIP (All Other) #3095

Each of the above CIP categories has a separate budget/Fund associated with it to track the costs. However, if the CIP project or purchase can be classified as a TIF eligible expense or related to one of the Village's Enterprise Funds (Water or Parking), such expenditure is budgeted within that specific Fund rather than one of the CIP Funds noted above.

While CIP budget documents provide both historical expenditures and an extended budget through fiscal year 2028, only the budget for fiscal year 2024 may be legally adopted for appropriation. Outer or extended years are shown for strategic and informational purposes only. In addition, in cases when a CIP project extends more than one year, amounts must be re-appropriated for future years rather than carried forward.

OVERVIEW

The Department of Public Works is responsible for the oversight and management of three Capital Funds including the Capital Improvement Fund, Building Improvement Fund and Fleet Replacement Fund. These funds support equipment and projects that have an extended life. Streets, sidewalks, HVAC systems and vehicles are typical expenditures from these funds. The Capital Improvement Fund also includes expenditures for personnel salaries and benefits that support the Funds' programs and projects. The Capital Improvement Fund includes expenditures to the other capital funds through inter-fund transfers.

The Finance and Information Technology Departments are primarily responsible for the oversight and management of the Equipment Replacement Fund, which tracks expenses related to major technical equipment purchases for Village departments.

Capital projects are typically any costs that are capitalized according to the Village's fixed asset policy. In certain circumstances, a project or purchase may be included within the CIP even if it does not meet the capitalization threshold if it is determined that special attention and focus should be provided to the project or purchase.

Capital projects include costs in six main categories which include:

- Certain Professional Services
- Land or Building Acquisitions
- Infrastructure Improvements
- Building Improvements
- Machinery and Equipment
- Other/Miscellaneous

MAIN CAPITAL IMPROVEMENT FUND

Fund Summary

The Capital Improvement Fund generates revenue through a dedicated 1% sales tax, a six cent per gallon gasoline tax, a 3% local cannabis tax, as well as through the state distribution of IMF Telecommunications Taxes. The fund's most notable expenses are the repair and replacement of local streets, alleys and sidewalks. It also funds the other capital funds through inter-fund transfers.

Although the current focus is on the actual infrastructure improvements, it is not possible to have a valid conversation about the fund's ability to pay for the costs of projects without also discussing the other expenses of the fund.

Below is a revenue and expense table that illustrates the overall fund finances. However, the operating budget portion, excluding capital expenditures, is currently under review and will come before the Finance Committee and Village Board as a part of the operating budget recommendation.

Priority Scale

A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project Complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. Medium= Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact.

None= Not included as a recommendation in Climate Ready Oak Park.

Description

Reconstruction of alleys in deteriorated condition. Existing alleys are completely removed and replaced with new concrete alleys which have an inverted crown to improve drainage in the alley and backyards. Some alleys require storm drains and sewers due to flat topography. Grants are typically applied for to fund the additional costs for permeable alleys. Permeable alleys typically cost around 25%-50% more than traditional concrete alleys depending on the soil types and need for drainage. Typical concrete alleys cost approximately \$165,000 to \$225,000 per alley for a north-south alley depending if storm sewer are needed.

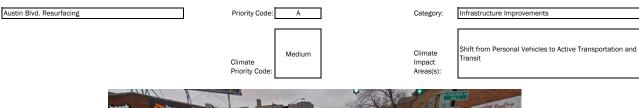

Justification:

Alleys provide the primary means of garage and parking access for the majority of residents as well as being used for refuse collection. Staff will pursue grant opportunities for installing green alleys with permeable pavements for alleys already identified for replacement based on condition in areas with sandy soils in alignment with the Climate Action Plan Goal GI02 to increase investment in green infrastructure and other resiliency projects.

Current Status:

The 2020 and 2021 Alley project was canceled due to budget impacts from COVID-19. The 2022 project included a \$475,000 grant from MWRD for four green alleys. Alley pavements were re-evaluated in 2022 and updated condition scores are being used to determine future alley replacement priorities. In 2023 CDBG funds were removed from the alley project and the 3 alley segments deferred until 2024 due to HUD requirements and CDBG funds were increased in 2024 to account for this. The Village received MWRD funding for constructing 4 green alleys in 2024. Costs related to the construction of the green alleys are shown in the CIP Fund account for sustainability. The 2024 alley project also includes the resurfacing of the parking lot and pavements adjacent to the North Fire Station (Station 2) since the adjacent alleys are being replaced. Costs for the Fire Station Parking Lot are shown in the CIP Building Improvement Fund sheet for this project.

Description:

This project includes the 2019/2020 resurfacing of Austin Boulevard from Lake Street to North Avenue including the Village's water main project from Lake to Chicago along with the 2024 resurfacing of Austin Blvd, from Roosevelt to Lake including sewer replacement primarily south of I-290. Austin Blvd is jointly owned by the City of Chicago and The Village of Oak Park with the Village owning the west half. The City resurfaced Austin from Lake to North Ave in 2019 and 2020 with the Village paying for its share. In 2024 the Village and City plan on resurfacing Austin from Roosevelt to Lake Street using Federal STP funds to pay for 80% of the eligible costs. There is needed sewer replacement and rehabilitation primarily from Roosevelt to I-290 to be completed in 2024 in coordination with the future resurfacing project.

Justification:

The Village's half of Austin Boulevard from Roosevelt to Lake Street was last resurfaced in 1999 and is in need of resurfacing. The combined sever mains have been televised and based on their condition several sections of severs will need to be replaced in conjunction with the resurfacing project primarily south of 1-290. The Village received Federal STP funds to pay for 80% of the costs for the resurfacing project from Roosevelt to Lake in 2024. The Village will be partnering with the festing project groups to so the entire roadway width can be resurfaced at one time.

Current Status:

ondituro

The Village received \$1,082,400 in Federal STP funds for the resurfacing of Austin from Roosevelt to Lake St for 2024. The Village and City of Chicago entered into an IGA for the resurfacing project in 2024 to resurface the full width of the roadway with the City being the lead agency and overseeing the design and construction. The Village transferred the STP funds to the City for this project. The Village will reimburse the City for local costs using MFT and local CIP funds. The Village designed and will construct the 2024 sewer project, including disconnecting an emergency water supply connection at Roosevelt) separately from the resurfacing project using local Water & Sewer Funds. The Village is still waiting for a final invoice from the City for the 2019 project.

Description:

Neighborhood Greenways/Bicycle Boulevards are streets designed to prioritize bicycle travel with infrastructure features that calm and reduce vehicular traffic on neighborhood streets and improve safety at busy intersections. Specific features will be discussed as part of the plan implementation.

Justification:

The Village Bicycle Plan adopted in 2008 established goals of increasing bicycle use and creating a safe and inviting environment for cycling. This Bicycle Boulevard is a means to work towards these goals. Staff will collaborate with neighboring communities to update the Village Bicycle Plan. The improvements align with Climate Action Goals CA01, VT01-2, VT09 and TS01 to improve pedestrian safety and reduce vehicle emissions by creating more opportunities for bicycle travel.

Current Status:

The Bicycle Boulevard System Study was approved by the Village Board in 2015. The Transportation Commission (TC) recommended the first phase of the boulevard system be implemented on Scoville Avenue and on Ontario Street due to its proximity to OPRF. The TC recommended to move forward with implementing the Boulevard plan with the remaining sections of Scoville Ave/Elmwood/Fair Oaks as being the next priority. The 2023 project includes the Ontario/Scoville installations. The 2024 project includes the remaining sections of Scoville, Elmwood, & Fair Oaks along with Kenilworth from Madison to Chicago. Design of the 2023 and 2024 project is being completed in 2023. The design of the entire greenway system is planned for 2024 with construction of the entire system planned for 2025 and 2026.

	Total:		-	235,000	270,000	244,697	650,000	2,500,000	2,500,000		

This is a project to install protected bike lanes on Ridgeland Avenue, generally from Roosevelt to North Avenue. Protected bike lanes are physically separated from the traffic lanes with curbs or delineator posts. Bicycle Boulevards are streets designed to prioritize bicycle travel with infrastructure features that calm and reduce vehicular traffic on neighborhood streets and improve safety at busy intersections. Specific features will be discussed as part of the plan implementation.

Justification:

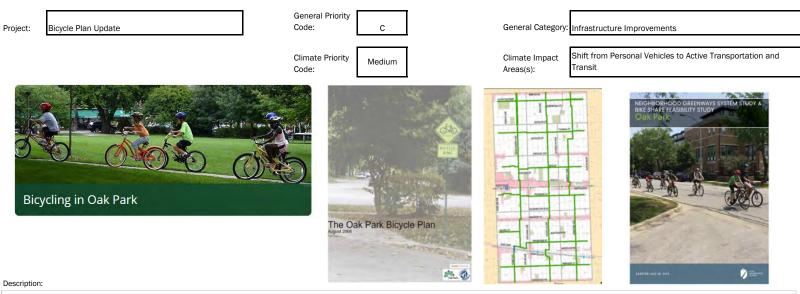

The Village Board expressed a desire to add protected bike lanes on a north-south route and Ridgeland Avenue is the most likely candidate. In order to add bike lanes on Ridgeland, on-street parking will need to be removed. Ridgeland is an unmarked State Highway under IDDT jurisdiction from Roosevelt to Augusta. IDDT coordination will be required and public meetings through the Transportation Commission will be needed to review the design and allow for public comment for the associated parking loss. The improvements align with Climate Action Goals CA01, VT01-2, VT09 and TS01 to improve pedestrian safety and reduce vehicle emissions by creating more opportunities for bicycle travel.

Current Status:

Design of the project would start in 2024 along with IDOT coordination and public meetings at the Transportation Commission for the design and parking loss. Final design is planned for 2025 with construction in 2026. Staff will look for grant opportunities for construction costs.

This project involves updating the Bike Plan to look for additional opportunities for adding bike lanes through the Village as well as other cycling needs.

Justification:

The 2008 Bike Plan and the 2014 Addendum did not consider many streets for dedicate bike lanes due to on-street parking loss which would be needed. This update to the bike plan would make sure recommendations in the plan are consistent with current industry standards and would look for opportunities to planning dedicated, or protected, bike lanes in the Village. The improvements align with Climate Action Goals CA01, VT01-2, VT09 and TS01 to improve pedestrian safety and reduce vehicle emissions by creating more opportunities for bicycle travel.

Current Status:

The Bike Plan update would be administered through the Transportation Commission in 2024. Construction of recommended projects is shown for 2025 and beyond.

 Bicycle Parking Facilities
 General Priority Code:
 N/A

 Climate Priority Code:
 None

 Image: State of the state

Description:

Project:

The project involves the installation of semi-vertical bike racks and pedestrian improvements on North Boulevard from Marion Street to Forest Avenue and the installation of covered bike parking shelters in parking lot 1 at Euclid and Harrison, parking lot 15 on Oak Park Ave south of Garfield and in a proposed bump-out at East Avenue and Harrison Street. FHWA is funding 80% of the eligible items of the project also includes resurraining and Lot 15.

Justification:

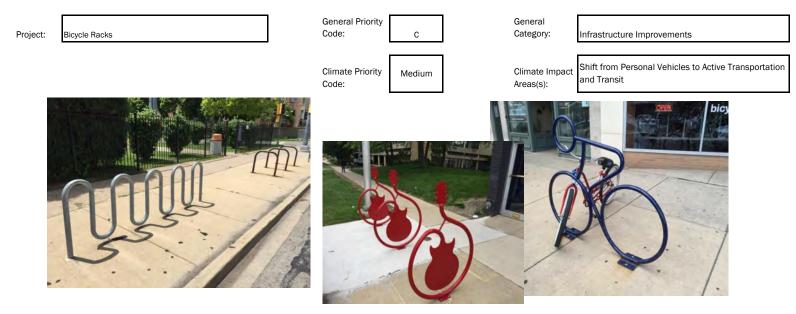

The Bike Plan recommends installing bike parking near transit stations.

Current Status:

In 2011 the Engineering Division applied for and received a CMAQ grant for the installation of bike parking facilities at locations near the CTA Blue & Green Line stations. The project was constructed in 2016 with final completion of punch list work in 2017. The Village paid for the project up-front and will be reimbursed by the State. The project was completed for \$386,444 which was \$8,642 under the awarded amount of \$395,086. In January of 2018 the Village invoiced the State \$285,678 for the State's 80% share of the eligible construction items and the construction management. The final Village's share for construction was \$122,156 and \$5,389 for construction management. The Village received final reimbursement from IDOT in January of 2023.

	Total:	-	-	-	-	-	-	-	-	-	-

Description:

The project involves the purchase of bicycle racks for new installations and to replace older, rusted out racks.

Justification:

Bike racks are installed throughout the community, primarily focused in the business areas or in high pedestrian transit areas.

Current Status:

Bike racks are purchased and installed by Public Works staff. The Public Works Department has been using existing inventory for new bike rack installations which has been all used up and will need to purchase additional racks for future installations and plans to continue purchases on a two year cycle.

Description:

This project is focused on maintaining existing paver and brick sidewalks, streets, alleys, and crosswalk areas to address areas of settlement, replace damaged pavers or add sand to brick joints. Replacement or modification to tree pits in commercial areas is also included in this work.

Justification:

The Village has several blocks of brick streets, brick alleys, pavers in sidewalk areas, bluestone pavers, etc., that require occasional repairs to address areas where bricks have settled or been damaged. Additional sand also needs to be added to the joints in the bricks on a periodic basis and commercial areas need cleaning and sealing. Brick crosswalks also exist in many of the commercial districts that require maintenance. This work is necessary to eliminate safety tripping hazards in heavy pedestrian areas and improve the aesthetics of the business districts.

Current Status:

This is an annual program and failed areas are identified throughout the year and scheduled for repair. In 2023 funds for this project were spent replacing heaving tree grates with Porous Pave.

Village of Oak Park **Capital Improvement Fund Project Sheet** 2024 - 2028 General Priority General Project: Bridge Deck Repairs Code: Category: Infrastructure Improvements Climate Priority Impact N/A None Code: Areas(s):

Description:

The Village has maintenance responsibility for the bridge deck's wearing surface and joints over I-290 for the bridges at Home Avenue, Oak Park Avenue, East Avenue, Lombard Avenue, and the west half of Austin Boulevard. Repair work consists of replacing deteriorated or failing bridge joints, partial depth patching of deterioration of the wearing surface of the roadway and sidewalks, repairs to fencing and railings, and making ADA upgrades where needed.

Justification:

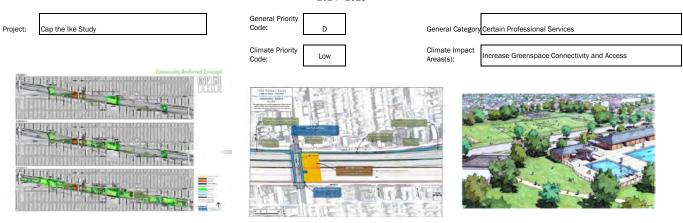

Per the agreement with the State of Illinois, the Village is responsible for the maintenance of the bridge decks over I-290. The surface and joints of many of the decks are in poor shape and in need of repairs. In order to make the repairs properly, there will need to be removal of portions of the concrete deck surface. In an effort to protect the vehicles traveling on the I-290 mainline, it is necessary to install wood shielding on the underside of the deck.

Current Status:

The 2017 work involved replacing the bridge joint at the north end of the Lombard Avenue bridge near Flournoy. The 2018 project included installing protective wood shielding under the Home Avenue bridge and patching sidewalks and parapet walls on Oak Park Avenue. The work in 2019 and 2020 included patching Home and East Avenue. The bridges were all inspected in 2022 and a 5-year plan for future repairs and maintenance work was prepared. Work in 2023 included design the repairs to the fencing on Home Avenue Bridge and the construction was completed in-house by Public Works Fleet Division crews to save costs. Design work for the 2024 project was started in the summer of 2023. The 2024 project includes patching and shielding on Oak Park Ave as well as all the remaining recommended repairs on all the bridges. Future years include \$10,000 annually for minor repair work and coatings to keep the bridges safe and minimize future deterioration.

Description:

The Village previously received Federal Funds for studies and design related to capping I-290 (Cap the Ike). The current feasibility study focuses on the expanded bridge decking opportunities identified in the LOI with the primary emphasis on the Oak Park Avenue and East Avenue decks. The study also includes evaluating the various aesthetic treatments considered in the LOI on the bridges and how these treatments connect aesthetically with the expanded decking options and even with noise walls. The Home Avenue bridge is not included in this project as it will have its own phase I engineering study because the Home Avenue bridge can potentially be constructed independently from the I-290 Reconstruction project. The cost for the current study is \$1,858,803.

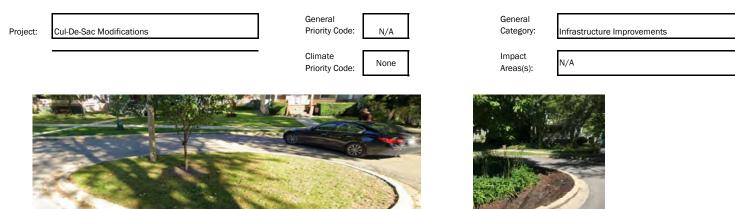

Justification:

The existing bridges will be completely replaced with the I-290 Reconstruction project. The Village will need to complete the phase I preliminary design of any caps and expanded decking being considered with the I-290 project. The Village will use the Cap the lke funds to complete the feasibility study and subsequent phase I preliminary design of any caps and expanded decks at Oak Park and East Avenues. Home Avenue will be a separate design project and is intended to be fully designed so that it could be built prior to the I-290 project in case Federal Funds become available for this work. The grants covers almost 100% of the costs which are paid up front by the Village and reimbursed by the State. The FHWA required revising the scope of the previous phase I study to a feasibility study to comply with the requirements to advance phase I studies to construction within 10 years. Installation of noise mitigation walls align with Climate Action Goal CA03

Current Status:

The Village restarted the Cap the lke study after work was suspended while IDOT was completing preliminary design of the I-290 Reconstruction project to ensure any proposed caps would be feasible and compatible with their proposed design. In 2017 the FHWA required the Village to revise the phase I study to a feasibility study to comply with their policies. In December 2017 the Village approved the scope for the feasibility study. IDOT has been reviewing the feasibility study is cope and contract since January 2018 and has not authorized work to start on the project vert. The proposed feasibility study focuses on the expanded bridge decking opportunities identified in the LOI with the primary emphasis on the Oak Park Avenue and East Avenue decks. The study also includes evaluating the various aesthetic treatments considered in the LOI on the bridges and how these treatments connect aesthetically with the expanded decking options and even with noise walls. Other items include identifying funding opportunities for the bridges by evaluating options for TIF districts or SSAs, best uses for the expanded decks including creating either a building or a platform for a building, a commercial development at Oak Park Avenue and athetic fields and facilities or park space at the East Avenue deck, options on how to incorporate and coordinate CTA station replacements with these caps, preliminary structural design of the bridges, environmental impacts from the caps, parking and traffic impacts to caps and cost analyses. The Home Avenue and any related work. The Village has tegrating grants which will be used to fund the feasibility study, the phase I & II designs for Home Avenue and any related work. The Village has 4 grants for this work with one grant covering 100% of costs (current available balance of \$719,376) and remaining 3 grants covering 80% of costs. Engineering work is paid up front by the Village and reimbursed by the State. IDOT is still reviewing the agreement for the services and has not authorized work

Description:

To modify the geometry of selected cul-de-sacs around the village in order to better accommodate delivery trucks.

Justification:

Due to the increase of delivery trucks over the last several years there are several cul-de-sacs around the village in which the current geometry does not properly accommodate the turning movements of delivery trucks. The cul-de-sacs are often rutted and having the landscaping destroyed. This project would revise the size of the cul-de-sac to reduce damage by trucks, and to restore any landscaping already damaged.

Current Status:

This project is currently anticipated to be implemented over 2 years starting in 2022. The 2022 Resurfacing of Various Streets project included modifying 4 cul-de-sacs to improve turning radii and reduce damage and maintenance costs of the landscaping. The 2022 project's work was completed in 2023. The 2023 project includes modifying the remaining cul-de-sac island on the 300 block of South Taylor which has consistent damage.

Description:

This project includes the resurfacing of Division Street from Harlem Avenue to Austin Blvd. Division Street was last resurfaced in 2007. The Village programmed the use of State REBUILD Illinois funds (totaling \$3,418,965) for this project. Rebuild funds have been banked for 3 years for this 2023 project. This work was broken into two construction projects. A separate locally funded water and sewer project which includes sewer lining from Hayes to Humphrey to address structural issues, sewer replacement from Grove Avenue to Oak Park Avenue which was identified as a recommended project in the combined sewer master plan to address basement backups, and a new sewer main west of Ridgeland to replace a deteriorated small diameter pipe. Water main replacement is from East Avenue to Elmwood Avenue to improve fire flows in the area which was identified as a recommended project in the Village's Water System Master Plan Report.

Justification:

Division Street was last resurfaced in 2007 and was in need of resurfacing. Sewers being replaced are in failing condition.

Current Status:

The water and sewer project was completed in late May. The resurfacing project was substantially completed in August with landscaping completed in the fall.

Description:

The Illinois Department of Transportation (IDOT) is in the process of finalizing Preliminary Engineering and Environmental (Phase I) Studies for the complete reconstruction of the Eisenhower Expressway (I-290), including all bridges from west of Mannheim Road to Racine Avenue through Oak Park. There will be certain Village costs associated with this project.

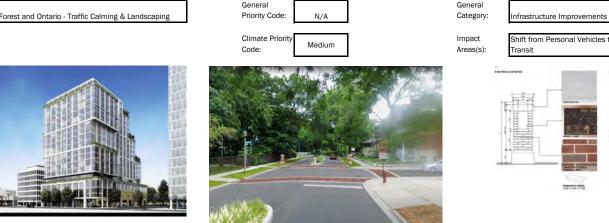

Justification:

As a result of the public meetings (Phase I) held in 2015 and 2016 with the Village Board, the community and IDOT, a number of Village responsibilities (project costs) have been included in the 2016 "Letter of Intent". These costs include items such as Traffic Signals, Bicycle and Pedestrian facilities, Roadway Lighting, Utility Relocation, Maintenance and Jurisdiction, Noise Walls, Bridge Aesthetics, Hardscape and Landscape. Installation of noise mitigation walls along the expressway and bicycle/pedestrian facility improvements align with Climate Action Goals NI02 and VT01-2 to reduce noise impacts and improve pedestrian saftey.

Current Status:

The I-290 Reconstruction project is on-hold until funding becomes available although IDOT has applied for Federal funds for construction of the main drain and CTA stations at Austin/Lombard and Cicero including a new bridge at Lombard Ave. IDOT is including the Ridgeland Ave bridge replacement as part of their normal 5-year CIP with design starting in 2023 and construction planned for sometime between 2026 and 2028. The total I-290 Reconstruction project has an estimated construction cost of almost \$4 Billion. Should funding become available, design work would most likely start no sooner than 2 years after funding is secured to allow for IDOT's processes for selecting consulting firms for these large projects with construction work for the project starting probably around 5 years after funding is secured. Construction work would start with bridge replacements for several of the bridges crossing I-290. It is anticipated it will be an eight year project when started. When the project starts funds are provided for one (1) new FTE staff for coordination of this project with the community and IDOT.

Shift from Personal Vehicles to Active Transportation and

Description:

Project:

The Albion Development contributed \$340,000 in funds to the Village of Oak Park, the Municipal Arboretum and traffic calming. These funds are planned to be used in the nearby public right- of- way for enhancing the area and calming traffic. The proposed project includes replacing high level street lights with low level pedestrian lights, replacing deteriorated crosswalks, installing brick and limestone columns, installing a new enhanced crosswalk by the alley north of Lake Street on Forest Ave along with a pedestrian activated flashing beacon, adding a landscaped median on Forest near the 19th Century Club, landscaping, and street resurfacing. The scope and design was coordinated with the neighbors.

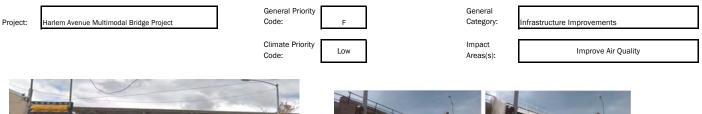

Justification:

The donated funds will be used in the nearby area to the Albion Development to offset impacts from the development for traffic calming which will incorporate landscaping and public art. Traffic calming improvements align with the Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians.

Current Status:

The Village awarded a construction contract to R.W. Dunteman in March of 2023. Work on the project was started in July due to long lead times for various items. In May of 2023 the Village Board approved a Budget Amendment to remove CDBG funds from this project and added CIP funds for local street construction to the project. Work is anticipated to be completed in the fall of 2023. The Village received the \$340,000 in revenues in the spring of 2020 from the Albion Development. The project includes the resurfacing of Ontario Street and portions of Forest in the project limits which is in very bad condition.

Description:

Design and replacement of the Harlem viaduct in partnership with Forest Park and River Forest. The bridge is located at the intersecting border of the three communities with 1/2 of the bridge in Oak Park, 1/4 located in River Forest, and 1/4 located in Forest Park. Funding for the local share of the project (assuming the Village's receive a grant) is based on this same breakdown.

Justification:

The proposed Harlem Avenue Multimodal Bridge Project consists of the replacement of the existing bridge, the lowering of the Harlem roadway to provide for required clearances, and pedestrian and aesthetic enhancements that will transform this deteriorated bridge into a gateway for the three Villages. The new bridge will feature a clear span from viaduct wall to viaduct wall with no columns. The removal of the columns will not only improve the aesthetics but also improve traffic flow on Harlem. Sidewalk, lighting, and decorative treatments will enhance the pedestrian experience under and around the bridge. Vehicle idling in congested areas contributes to greenhouse gas emissions. Improving traffic flow in this area will reduce idling in alignment with Climate Action Goal AQO2 to minimize air pollution.

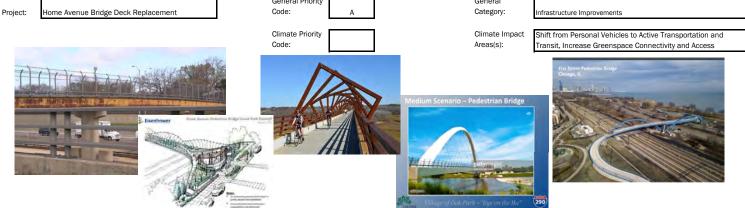

Current Status:

The phase I Engineering for this project is substantially complete and will likely result in a recommendation of a No Build due to conflicts with IDOT, CTA and CSX railroads unless these can be resolved. IDOT indicated that the project would not be approved until an ownership and maintenance Intergovernmental Agreement (IGA) was in-place between River Forest, Forest Park, Oak Park, IDOT, CTA, Metra and the Union Pacific Railroad. Based on the difficulties of obtaining even a simple letter of support from the railroads, an IGA based on the limited details available from a Phase I study will be extremely difficult to obtain. The IGA requirement coupled with a lack of funding for design and construction has caused the project to slow. Over the subsequent years, multiple grant opportunities were solicited in an affort to secure project funding in hopes that acquisition of a funding source would further the previous IGA discussions. As no funding source was acquired, the IGA discussion has not been revisited. The Villages requested an extension on this project and its federal funds as a result of this comment.

River Forest received \$250,000 in State funds to complete the phase 1 study for the additional design work, pay for UP design review fees, and negotiate with IDOT, UP, and CTA, in order to complete the phase 1 preliminary design for this project and obtain an IGA. Estimated total costs and timelines for future phases are: Phase II (Engineering Design)=\$3,600,000 lasting 2 years, and construction \$32,000,000 lasting 2 years. Costs shown below assume the Villages will only move forward with this project assuming a grant funds 80% of the total costs with the 30 local match being broken down by Village of Oak Park responsible for 50% of a local match with 25% River Forest and 25% Forest Park. The Village would pay up front for engineering and be reimbursed.

Village of Oak Park Capital Improvement Fund Project Sheet 2024 - 2028 General Priority General

Description:

The Home Avenue Bridge is planned to be replaced with the future I-290 and the Village is responsible for the design and construction of the bridge and will own the bridge per the Letter of Intent with IDOT. The Village has federal Cap the lke grant funds that will be used to fund a portion of the design of the bridge. The Engineering Division will select a consultant to complete the conceptual designs of the bridge followed by the engineering designs (Phase 1 and 2) of the selected bridge. The conceptual designs will include options on the low cost range, medium investment, and high investment levels. Construction would likely be coordinated with IDOT's future I-290 reconstruction project. Construction costs for low could potential be in the range of \$6M, medium around \$10M, and high around \$25M. Construction cost estimates would be provided during conceptual design so the Board can approve the concept and have potential cost information before the detailed design is started. Costs shown are for the medium level of construction which is consistent with the LOI. The Village may have approximately \$2M remaining in federal grants to fund a portion of construction which would be administered by IDOT and Village would reimburse (grant revenues not shown for construction as a result).

Justification:

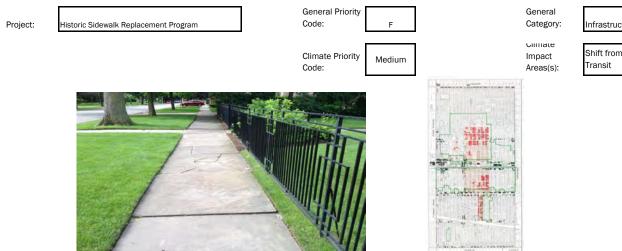

The existing pedestrian bridge at Home Avenue is deteriorating and will be patched temporarily with a separate project and will be completely replaced with the I-290 Reconstruction project. The Village will need to complete the design of any non-standard bridge being considered with the I-290 project. If the bridge were to be constructed prior to the I-290 project, the Village will use the Cap the lke funds to complete the Phase I and II engineering design for the Home Avenue Bridge so that it could be built prior to the I-290 project in case Federal Funds become available for this work. The grants cover 80% of the costs which are paid up front by the Village and reimbursed by the State. Installation of noise mitigation walls align with Climate Action Goal XI02 to reduce noise impacts. Staff will also research potential opportunities to establish green corridors along the expressway to support native plantings and willdiffe to incorporate Climate Action Goal CAO3.

Current Status:

The Engineering Division requested qualifications and proposals in the fall of 2023 with anticipated Board approval of the Engineering Agreement and Agreements with the State for the phase 1 and 2 engineering for the bridge in late fall of 2023. The Village is anticipating having IDOT approval to start design work in 2024. The design work for both phases will take approximately 3-4 years since it will be administered following IDOTs procedures due to the federal funding. The Village has three (3) Cap the lke Grants to fund the design of the bridge.

Infrastructure Improvements

Shift from Personal Vehicles to Active Transportation and Transit

Description:

Replacement or reinstallation of deteriorated, hazardous and/or non-ADA compliant sandstone sidewalks most of which are in historic districts. Historic sandstone sidewalks should be salvaged and reinstalled where possible to maintain the longest continuous runs of sandstone sidewalk to maintain the historic character of these unique sidewalks. Replacement stone needs to be sourced for replacing sidewalks too deteriorated to reinstall or salvage.

Justification:

Improve pedestrian safety and maintain the historic character of these unique sidewalks primarily located in historic districts. The Historic Preservation Commission has been working since 2000 to develop a program to address these sidewalks as many are trip hazards. The Engineering Division completed a survey of all 4,260 stone sidewalk squares identifying which squares are in good condition, which can be releveled and which require replacement. As of 2017 roughly 51% are level and in good condition, 33% require releveling and 16% are broken and require replacement. They will be prioritized to relevel squares and consolidate longer runs of stone sidewalks to preserve the character of the historic districts.

Current Status:

The Village last reset sandstone sidewalks in 2016 and 2017. The Village has applied for grant opportunities, such as ITEP, but has not been awarded a grant for this work to date. Work is being deferred due to staffing and other priorities.

Description:

The Lake Street Streetscape, Resurfacing and Utility Improvement projects were constructed in 2019 & 2020. The Village received \$3M in Federal STP funds for the streetscape project from Harlem to Euclid. The locally funded utility project consisted of water main replacement from Oak Park Avenue to Euclid Avenue, sewer replacement from Grove Avenue to Euclid Avenue and sewer lining in sections from Euclid Avenue to Ridgeland Avenue. The street resurfacing project was from Euclid Avenue to Austin Boulevard and uses local OIP funds and a \$310,000 grant from Cook County. There were advanced contracts for traffic signal an lighting improvements at Albion to coordinate with the develoement and a separate purchase contract for traffic signal poles due to long lead times. The projects were substantially completed in 2020 and will be closed out with DIOT for the streetscape project over the next couple of years. The Village funded a grant program with DIOT for the Better Lake Street Rewards Program to help with potential loss of business during construction which used \$46,345 of funds.

Justification:

The Greater Downtown Master Plan includes recommendations for streetscape enhancements within these business districts. In early 2015 the Village Board re-established the Lake Street Streetscape Committee to discuss streetscape options for the roadway, sidewalks and underground public utilities on Lake Street as this public infrastructure is nearing the end of its useful service life. The Village received \$3M in Federal Highway STP funds for streetscape construction. The streetscape project was blob (JIO) Tin January of 2020 and paid up/forting twith the Village being invoiced for its share. Costs shown for the streetscape releates estables reflect the Village's expenses.

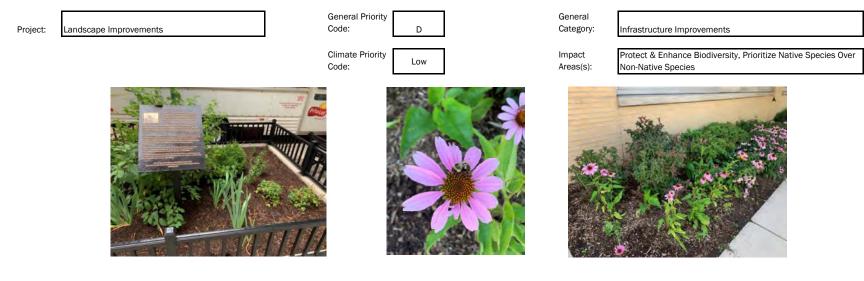

Current Status:

The streetscape project was substantially completion in late fall of 2020 on schedule and will be closed out with IDOT over the next couple of years. The water and sewer project was completed in the spring of 2020. The street resurfacing project was completed in the summer of 2020.

Description:

Work includes upgrading of the Village's landscaped areas. Sites will be selected each year based on their condition.

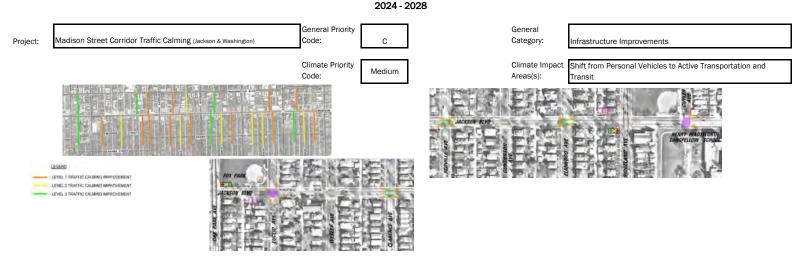

Justification:

The Public Works Department maintains over 180 landscaped sites throughout the Village. This includes landscaped medians, cul-de-sacs, parking lots, business districts and traffic diverters. Current maintenance funding does not include the necessary funding to provide appropriate replacement and improvements. Both native plants and plants that support pollinators are prioritized in design. This aligns with the Climate Ready Oak Park plan to create habitat which supports pollinator biodiversity (NN04), promote sustainable landscaping practices (PE02), and avoid planting invasive plant species (PE06).

Current Status:

Recent landscape enhancements were made to the follow business districts: Harrison Arts District, East Chicago, South Marion, East Lake, and Downtown Oak Park. Recent landscape enhancements were made to the following landscape areas, Jackson Boulevard, Chicago cul-de-sac, Public Works Center Rain Garden, and Le Moyne cul-de-sac. Future landscape enhancements projects include the diverters and cul-de-sacs, continued business district improvements, and the Harlem/290 landscape bed. Work in 2021 was suspended due to the COVID-19 pandemic.

Description:

The Village conducted a traffic study of the Madison Street corridor including Jackson and Washington Blvd as well as side streets that intersect Madison Street to predict potential traffic diversion and impacts from the Madison Street road diet project. The traffic study recommends a series of improvements on Jackson, Washington, and side streets based on predicted diversion rates from Madison. The potential traffic diversion from Madison is currently just a prediction and the actual impacts to the adjacent streets will not be known until traffic data is collected following the road diet project and COVID. The project includes collecting traffic data in the fall of 2022 then verifying what traffic calming improvements best fit the actual conditions. Improvements on Jackson are shown for 2024 since Jackson is owned by the Village. Improvements on Washington are shown for 2025 since Washington is a State highway and improvements must be approved by IDOT. Washington and OAk Park signal modification and widening is shown on its own sheet. Other Washington improvements include bump outs to improve pedestrian safety. Side street calming measures are shown for 2024 for staff recommendations and again in 2025 to also account for additional calming measures based on requests from regidents through the petition process.

Justification:

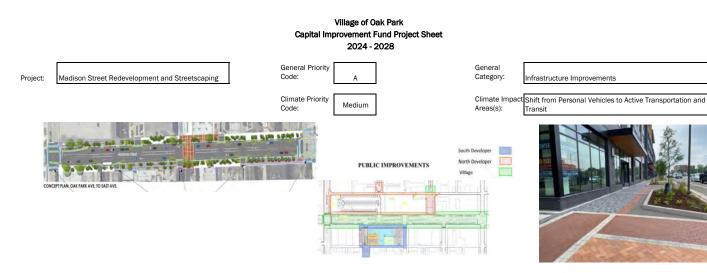

To calm traffic and improve safety from potential traffic diversion from Madison Street due to the road diet project. Traffic calming improvements align with the Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians.

Current Status:

Due to reduced traffic and lack of schools as a result of COVID and staffing shortages traffic data could not be collected in 2021 as intended. Traffic data was collected in the fall of 2022. V3 Companies is completing the review of the pre and post road diet data to determine if, and where, there are any concerns based on the data. Funds for construction are placeholders in case there are safety concerns staff recommends addressing. Staff will recommend implementing improvements only where actual safety of calming improvements are needed based on actual traffic data starting in 2024 on Jackson and local side streets with any work on Washington taking longer to design and get approved by IDOT. Staff will be reviewing taking over jurisdiction of Washington from IDOT as part of this work since proposed calming measures will likely not be approved by IDOT.

Description:

The Village approved a Redevelopment Agreement in December of 2018 which includes the transfer of Village owned parcels at 700-728 Madison Street and right-of-way, the creation of a Pete's Fresh Market on the north side of Madison Street action Street act of Oak Park Avenue, a senior living center on the south side of Madison, and for street resurfacing, streetscaping, and utility improvements on Madison from Oak Park Avenue to East Avenue. The Village previously completed conceptual streetscape designs and utility improvements that will be used as the basis of the design which will be refined and completed in coordination with the redevelopments' designs. Work includes street resurfacing, street lighting replacement, enhancements to the sidewalk and parkway areas, improved pedestrian crossings, and creating protected bike lanes. Redevelopment activities include utility relocation, environments.

This project is in alignment with the Village Board's plan for improvement of this corridor. To improve the safety and appearance of the Madison Street business district, encourage development, and replace deteriorating infrastructure. The project also aligns with Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians.

Current Status:

The Village approved the RDA in December of 2018. The Redico senior living center work was completed in the late summer of 2022. Pete's Fresh Market is currently having utility relocation work occurring with plans to start foundations in the fall of 2023 for an anticipated opening in the fall of 2024. The State approved the grant agreement for the DCED funds in the summer of 2023. The project is anticipated to be bid in September for construction of the water main work to start in late fall of 2023, pending IDOT review and Village board approval. Streetscape construction will primarily be in 2024. Cost for the Village's streetscape project are estimated at \$5,250,000. Costs for CIP Fund for Streetscape also include \$290,456 for Pete's reimbursement per RDA and \$203,882 for Redico reimbursement per approved agreement for public streetscape 202.

Village of Oak Park **Capital Improvement Fund Project Sheet** 2024 - 2028 General Priority General Code: Category: Project: Marion Street Crosswalk Repairs А Infrastructure Improvements Climate Priority None N/A Climate Impact Code: Areas(s):

Description:

This project consists of replacing the existing bluestone with matching colored concrete in the crosswalks on North Marion Street installed and making repairs to granite crosswalks on South Marion Street. Work also includes replacing the granite edging with a white concrete edging to minimize future repairs.

Justification:

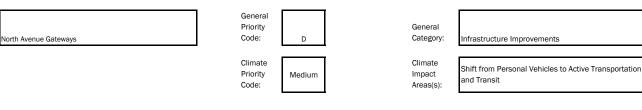

The bluestone in the existing crosswalks is deteriorating due to freeze thaw and vehicle loading. The granite edging of the crosswalks is also failing at several locations. The Village has several bocks of brick streets and paver alleys that require occasional maintenance to address areas damaged. Tree pits

Current Status:

In 2023 the crosswalks on South Boulevard were replaced with concrete. Crosswalks on North Boulevard will be replaced as part of the Lot 10 project and funds and not shown on this sheet. Future Year's funds are shown for various repairs as-needed for Marion Crosswalks.

Description:

Project:

In 2022 the Village received a \$200,000 federal appropriation sponsored by Senator Dick Durbin for the North Avenue Safety Improvement Project as part of the Federal Consolidated Appropriations Act. The Department of Housing and Urban Development (HUD) approved the proposed grant application for a proposed gateway feature on North Avenue near the Austin Boulevard intersection. Since the grant is only for \$200,000 the proposed scope for the grant funded project currently only includes one gateway near the Austin area. Should the Village desire to install a similar gateway feature near the Harlem intersection, the cost for that installation would likely be funded using the State funds for the proposed streetscape project. Construction of any gateways would be coordinated with the larger streetscape project.

Justification:

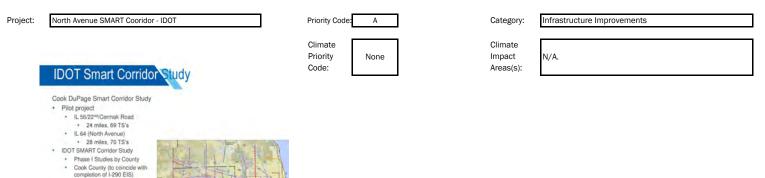

Various studies on North Avenue recommended streetscaping including gateways. The gateway feature will help identify the business district and identify to drivers that they are entering an area with increased activity to hopefully help slow and calm traffic.

Current Status:

The Village received a \$200,000 appropriation for the North Avenue Project from United States Senator Richard Durbin for the construction of gateways on North Avenue. The federal funds would be used for construction of a portion of 1 gateway near Austin. The other gateway, if desired, would likely be built as part of the State funded streetscape project by the City. Conceptual design is planned for 2024 with final design being completed in 2025. Construction is planned for 2026 and will be coordinated with the streetscape project. The Village approved grant agreements with HUD for this project and grant in May of 2023.

Description:

DuPage County

The Illinois Department of Transportation (IDOT) has completed their design for an Intelligent Transportation System (ITS) project on North Avenue from York Road to Cicero Avenue to improve traffic flow. The project includes traffic signal improvements including fiber optic interconnections and emergency signal preemption equipment, changeable message signage, traffic surveillance equipment, and corner sidewalk ramp improvements at some locations. The Village entered into an IGA with IDOT for the Village's cost sharing responsibilities for the emergency traffic signal preemption equipment.

Justification:

North Ave is an IDOT highway and those project is intended to reduce congestion and address accessibility issues at corner ramps and pedestrian push buttons at some locations. This is an IDOT project with Village cost sharing for emergency traffic signal preemption equipment.

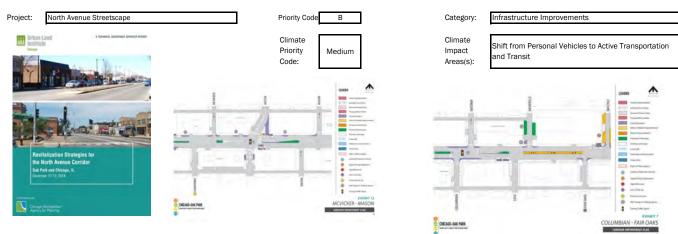

Current Status:

IDOT intends to bid the project in the fall of 2023 and construct in 2024. The Village will pay 80% of the Village's share of costs up front then the remaining balance upon completion of the work. The Village approved the IGA for this project in July of 2023.

Description:

This project consists of streetscaping on North Avenue from Harlem to Central. Previous streetscaping from Harlem to Oak Park was completed in 2006 so more minor improvements are planned in this section for some safety modifications and median modification. The State allocated \$27.4M for this project to the City of Chicago and they will oversee the design and construction on both sides of the street. The Village and CDOT previously worked together on a transportation study of North Avenue as well as an economic development stud which included recommendations for some of this work.

Justification:

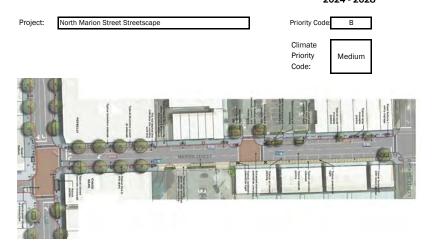

The streetscaping work from Harlem to Oak Park Avenue was previously completed in 2006. The transportation study recommends a variety of streetscaping improvements. The project is intended to be designed by CDOT with CDOT overseeing the construction contract also. The Village and CDOT would need to enter into agreements to move forward with this project.

Current Status:

The State of Illinois approved \$27.4M to the City of Chicago for a joint streetscape on North Avenue from Harlem to Central. Funds were released in the summer of 2023 and CDOT is working with the State to get the agreements in place with DCEO so that design work can get started. The Village and CDOT will need to enter into an IGA for this project. CDOT will be the lead agency overseeing and construction. Construction would be no sooner than 2026. The State funds should cover all costs for the streetscape project although the Village will likely need to pay for design and construction costs associated with any of the Village's water and sewer improvements which are still to be determined. Design of the water and sewer projects would start in 2024 with construction possibly starting in 2025, depending on the scope and schedule of the future streetscape project. Local CIP Fund costs are included as a placeholder for any potential items which would not be eligible for using the State DCEO funds with the City's design or construction project.

Category:	Infrastructure Improvements
Impact	Shift from Personal Vehicles to Active Transportation and Transit

Entry Feature Concept at Marion and Holley Court Garage

Description:

This project consists of installing streetscaping on the block of North Marion Street from Lake Street to Ontario Street to complete the last portion of DTOP along with sewer improvements to improve the capacity and reduce basement backups in portions of DTOP. The proposed scope includes new street and pedestrian lighting with outlets, traditional concrete sidewalks and curbs, asphalt resurfacing, crosswalk enhancements by Holley Court, pedestrian improvements at Ontario, street furniture, and sewer improvements. The scope was reduced to eliminate bluestone north of Holley Court and the bank.

Justification:

The streetscaping work was added to the design of the Lake Street Streetscape project by the Village Board in January of 2016. The construction of this one block was removed from the scope of the Lake Street project by the Village Board in 2017 to reduce the cost of the Lake Street project. Completing the streetscape on this block would complete the streetscape and unify the aesthetics for all of DTOP. Sewer improvements to interconnect two parallel sewers on Marion and extend a sewer south of the alley will improve capacity to buildings in DTOP.

Current Status:

Engineering design is substantially complete. The project is currently planned for construction in 2025 to avoid major impacts to parking in DTOP since Lot 10 is planned for replacement in 2024.

Description:

This project includes the 2021 resurfacing of Oak Park Avenue from Roosevelt Road to North Avenue including water and sewer work. The Village received federal STP funds for 80% of the costs of the resurfacing project.

Justification:

Oak Park Avenue was last paved in 2004 and 2005 and was in need of resurfacing. Water and sewer improvements were completed in areas to replace deteriorated pipes and improve capacity. Work was completed in 2021.

Current Status:

The 2021 resurfacing and water and sewer project is complete and the Village is waiting for final invoicing from IDOT for the resurfacing project which was completed under budget.

Village of Oak Park **Capital Improvement Fund Project Sheet** 2024 - 2028 General Priority General Oak Park Avenue Streetscaping and Resurfacing Code: Category: Infrastructure Improvements Increase Investment in Green Infrastructure & Other Resiliency Climate Impact Projects, Shift from Personal Vehicles to Active Transportation Climate Priority Medium Code: Areas(s): and Transit

Description:

This project is for the streetscaping and water and sewer improvements on Oak Park Avenue in the Hemingway District, generally from Randolph to Ontario. Construction is planned for 2025. The conceptual design of the streetscape is being determined in 2023 with final design occurring in 2024. The project includes full replacement of sidewalks and roadways, lighting, signal work, sewer main replacement for all of Oak Park Ave and water main north or the viaduct, and streetscaping elements. Construction costs for non sewer and water items will depend on the materials and amenities determined by the Village Board at the completion of the conceptual design process. Streetscape construction could vary between \$60.\$13M based on the final design process.

Justification:

The business district was last streetscaped in 1984 and the existing pavements, lighting, and amenities are in deteriorated condition and can benefit from replacement in order to improve the aesthetics, make the area accessible, and to replace deteriorating infrastructure which will improve the business district. The streetscape project was originally scheduled for work in 2022 but was deferred due to COVID and to provide a break in construction for the businesses in the Hemingway District. Staff will pursue grant opportunities for installing permeable parking lanes and rain gardens in alignment with the Climate Action Plan Goal GIO2 to increase investment in green infrastructure and other resiliency projects.

Current Status:

The conceptual design is scheduled to be completed in the fall of 2023. Pending Village Board approval of design concepts, a contract for the detailed design of the project will be presented to the Board for work occurring in late 2023 and through most of 2024. Construction is planned for 2025 and will likely be broken down into multiple contracts for advanced procurement of long lead time items, water and sewer replacement work, and streetscaping work.

Description:

Maintenance of existing asphalt roadways with surface treatments to extend their life and improve the riding quality of the roadways and preserve the deeper layers of the pavement structure. Traditionally work performed is pavement patching, microsurfacing rejuvenators, and crack filling on asphalt roadways that are currently in good or better condition, but other new technologies will be also be explored. Pavement patching is used to maintain existing asphalt and concrete roadways.

Justification:

Surface maintenance treatments are the most cost-effective way to extend the service life of asphalt roadways and achieve the longest lasting pavements for the least amount of money. Patching maintains overall riding quality, extends service life of roadways and minimizes the damage to vehicles.

Current Status:

Various pavement preservation treatments (microsurfacing, crack filling, seal coating, pavement patching, rejuvenators, etc.) are used with this project to maintain the roadways depending on the conditions of the various streets being rehabilitated. This is an annual maintenance program. The 2024 Budget includes funds for microsurfacing portions of Harrison Street in the Arts District.

Description:

Parking Lot 10 is located between Marion Street and Forest Avenue north of the railroad viaduct. This project includes reconstructing the pavement of the off-street parking lot and installing a new permeable parking lot, replacing sidewalks along the north edge of the parking lot to improve accessibility, lighting improvements along North Boulevard, electrical improvements, landscaping improvements, and the resurfacing of North Boulevard from Marion to Forest. The proposed project will improve the space for pedestrians, users of the district, and create a space that can better accommodate special events. The Village received a MWRD grant for the installation of the permeable parking lot in the summer of 2023. The grant will fund approximately 40% of the costs for the permeable parking lot.

Justification:

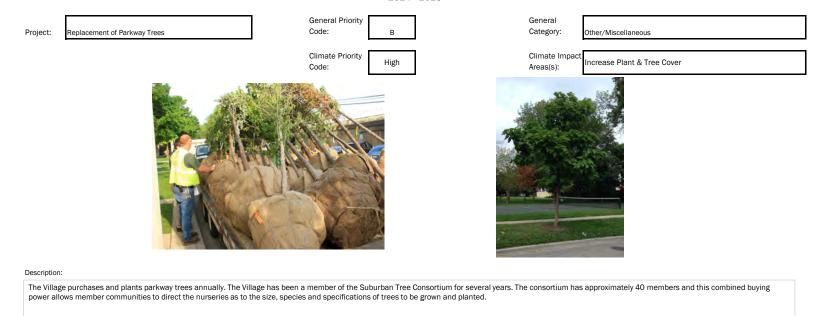

The asphalt for Lot 10 is in need of resurfacing due to its condition. The sidewalks along the north side of Lot 10 are in need of replacement due to impacts from the mature trees, and the median island separating angled spaces along North Boulevard from the parking lot is in need of work and improvements for pedestrian access. Lighting improvements will generally complete lighting in DTOP. The Village received a MWRD grant to install a permeable parking lot here due to its sandy soils and in conformance with the Climate Action Plan.

Current Status:

The Village was awarded a MWRD grant for the permeable pavement portion of the project in the late summer of 2023. Per MWRD requirements design needs to be completed in 2023 with construction required to be completed in 2024. Design work is underway currently with construction planned for 2024.

	Total:	-	-	50,000	50,000	114,058	1,025,000	-	-	-	-

Justification:

Primarily, trees replace those that have been removed due to disease, insect infestation, damage or safety. The recent experience of tree removal is approximately 300-500 trees per year primarily due to Dutch Elm Disease (DED) and natural senescence. Due to spacing criteria, not every tree removed creates a planting space. Currently 99% of the identified parkway planting spots are planted. In order to increase the Village's overall tree canopy cover, planting trees on private property is needed. We propose a pilot private tree planting incentive program beginning in 2025. It will partially reimburse property owners for the cost of planting a tree on their property. The initial reimbursement program will fund the planting of approximately 40 private trees. Planting new parkway trees aligns with the Climate Ready Oak Park plan goal of increasing tree canopy cover and carbon sequestration, mitigating urban heat island impacts, and equitably distributing trees throughout the Village (EPO3).

Current Status:

This is an annual program. Miscellaneous revenue is collected each year to supplement budgeted costs. Revenue is generated from damage to public trees through law claims or construction and restitution collected for trees removed in association with development. At the funding level of \$200,000 annually, approximately 300 trees can be planted. \$71,000 of this budget will be spent on contract tree watering. \$3,000 of this budget will be spent on contract tree planting diversity throughout the Village. In 2025 an additional \$10,000 is requested to fund the private tree planting reimbursement program.

Infrastructure Improvements	
Shift from Personal Vehicles to Active Transportation and Transit	

Description:

This annual project consists of resurfacing and reconstructing local streets and resurfacing Village owned on-street and on-street parking lots when they are located on streets already being resurfaced. Generally construction of traffic calming items approved by the Board is also included as part of these projects.

Justification:

Local streets should be resurfaced every 15-20 years to maintain the deeper layers of asphalt, concrete or stone bases. Streets already deteriorated need to be reconstructed with deeper layers of asphalt or new base courses to restore their structural integrity. Staff will pursue grant opportunities for installing permeable pavement on deteriorated roads marked for reconstruction in alignment with Climate Action Goal GIO3 to invest in green infrastructure and reduce the number of impervious surfaces in the Village.

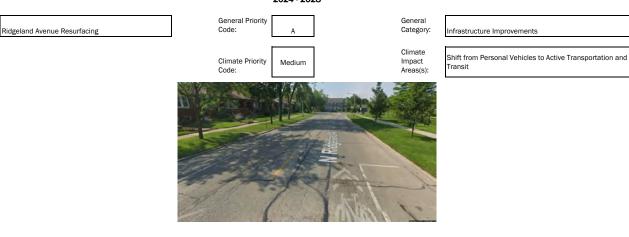

Current Status:

In 2020 and 2021 there was minimal street resurfacing due to reduced budgets associated with COVID. The 2022 project includes using \$1.75M in State DCEO grant funds and work was completed in the summer of 2023 due to material delays and labor strikes in 2022. In 2023 and going forward CDBG funds have been removed from this project due to HUD requirements for environmental reviews. Due to loss of approximately \$400,000 in CDBG funding and increased construction costs, 2025 and future years' budgets have been increased beyond the previous amount of \$2M for local street resurfacing in order to maintain the condition of the reads.

Description:

This project includes the resurfacing of Ridgeland Avenue from Augusta Street to North Avenue, sidewalk corner ramp improvements to meet current ADA requirements using CDBG funds, a bike & ped activated flashing beacon and crossing enhancements at Lemoyne, and traffic signal modernization of the existing older signal at the Division Street intersection. Ridgeland Avenue is an unmarked State highway from Roosevelt Road to Augusta Street. The Village received a grant of \$944,000 for construction and \$140,000 for construction engineering of Federal Surface Transportation Program (STP) funds for the resultacing of Ridgeland to North Ave. The STP funds will cover 80% of the costs for eligible items with MFT funds being used to fund 10% of the costs ruction costs. Design is locally funded to avoid delays with IDOT. Construction costs are estimated at \$1,450,000 (\$944,000 fed STP, \$253,000 MFT, \$178,000 CIP, and \$75,000 CDBG) and the State will pay for construction and invoice the Village for the MFT and local share.

Justification:

Ridgeland from Division to North Avenue was last resurfaced in 2010 and the pavement will be in need of resurfacing. Ridgeland south of Augusta was resurfaced in 2015 and is in good condition and does not need resurfacing and STP funds can only be used on the Village owned portion of Ridgeland north of Augusta. Some of the traffic signal equipment at Division is very old and is nearing the end of its useful life and will be replaced and modernized with this project. The crosswalk and signal improvements for this project align with Climate Action Plan Goals VT01-2 and VT08 to address safer pedestrian crossings and improve ADA compliance.

Current Status:

Construction is planned for 2026. Design work will start in 2024 since the project will be administered by IDOT because of the federal funding.

Sidewalk Replacement

Description:

Project:

This project consists of public sidewalk replacement. Primary funding is through Community Development Block Grant (CDBG) Funds since most work is an eligible expense for Americans with Disabilities Act (ADA) improvements. The project includes additional public right-of-way sidewalk that is not supported through CDBG funds such as carriage walks, 50-50 requests, project specific repairs and sidewalk cutting. Sidewalk cutting eliminates trip hazards by angle cutting sidewalks with elevation differences instead of full replacement, which will be utilized around schools and businesses to avoid the impacts from traditional concrete replacement.

Justification:

This project is critical for improving accessibility, pedestrian safety, and in complying with the ADA. The scope of the project aligns with Climate Action Plan Goals VT01-2 and VT08.

Current Status:

The 2022 sidewalk project was primarily constructed in the late spring of 2023 due to concrete shortages. The 2023 sidewalk project is planned for construction in the fall of 2023 and focuses on sidewalks along the east-west streets in the south half of the Village. The 2024 project will address the remaining east-west sidewalks needing replacement in the south half of the Village as there are more locations than could be completed with the 2023 CDBG budget along with north-south sidewalks generally in the SW quarter of the Village.

Village of Oak Park Capital Improvement Fund Project Sheet 2024 - 2028 General Priority General N/A Infrastructure Improvement Project: South Boulevard Streetscape and Utility Improvement Code: Category: N/A None Climate Priority Climate Impact Code: Areas(s): 16 SOUTH BOULEVARD STREETSCAPE IMPROVEMENTS TERRA

Description:

The Village received \$1,127,240 of federal TCSP grant funds to construct a streetscape project on South Boulevard and also received an additional \$300,000 in federal STP funds. The project was coordinated with the Lincoln Property development along South Boulevard. The project included sever main lining and water main replacement on South Boulevard and full pavement replacement and streetscaping with decorative materials and lighting from Harlem Avenue to Marion Street, water main replacement from Harlem Avenue to Marion Street and sever main lining on South Boulevard. The total construction cost paid by the State and the Village is invoiced for our share. The Village pays upfront for engineering and is reimbursed by the State.

Justification:

The Village received federal TCSP grant funds in 2012 to install the streetscape at this location and an additional \$300,000 in STP funds in December 2015.

Current Status:

The project was completed in 2019. The total cost of the construction is \$3,191,704 with the Village's share estimated at \$1,925,149 plus an additional \$12,573 paid to the contractor for work which IDOT could not include in the contract. Due to the delay in coordinating the work with the Lincoln Development, the Village approved a change order for construction and construction management to pay for the increased costs for labor, materials and coordination with the development and a second change order to fund the costs for provided a heated work environment to allow for the installation of the bricks and bluestone in the winter. Construction Engineering cost is \$258,712 with the Village share equal to \$107,027. The Village paid the final invoices from IDOT in 2022.

Project:	Street Furniture	General Priority Code:	D	General Category:	Infrastructure Improvement
		Climate Priority Code:	None	Climate Impact Areas(s):	N/A

Description:

Purchase of street furniture such as Village trash cans and planter containers in business districts.

Justification:

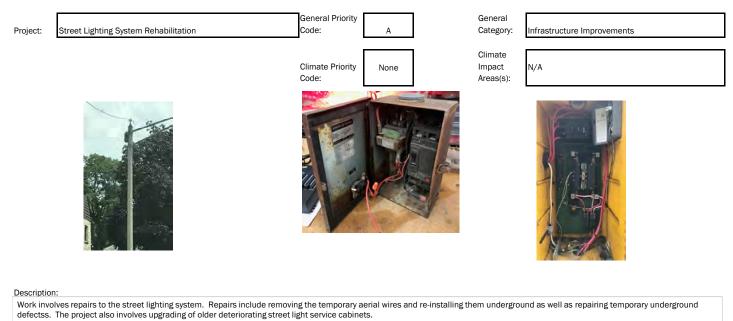

Street furniture is regularly replaced in an effort to maintain aesthetically pleasing public areas. Replacement is necessary due to furniture becoming damaged or deteriorated.

Current Status:

The Village annually budgets for the purchase of these items and purchases them as necessary. There are now more different styles of decorative trash cans, planter containers and benches in the various business districts including Southtown, Pleasant District, DTOP Marion/Westgate, western Chicago Avenue and along Roosevelt Road. Having extra furniture in stock will allow for more timely replacement in the event there is damage from vehicles.

2024 - 2028

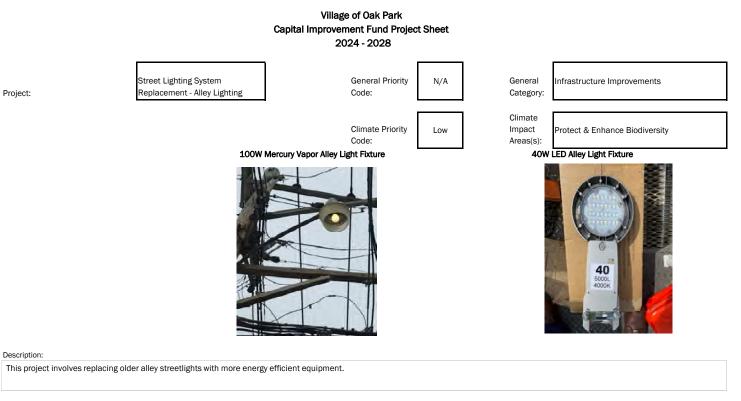

Justification:

In an effort to maintain the street lighting system, temporary repairs are made in some instances so that the street lights remain operational. These temporary repairs need to be made permanent at some point to maintain the integrity of the system.

Current Status:

Funds had been planned to be used in 2023 to refurbish two street light cabinets-one at Maple/Roosevelt and Marion and Randolph depending on cost. In the coming years there will need to continue to replace overhead wires to underground cables, refurbish more street light cabinets. As noted above, the Village will also need to make plans to replace the light pole mounted control boxes. This work is proposed to start in 2024. Staff is currently looking at different options and price estimates for this project. Capital program improvements align with the Climate Action Plan Goals VTO1-1 to upgrade critical safety infrastructure.

Justification:

As a result of community interest and Village Board discussion, a replacement program of the older 100 Watt residential street and alley lighting was proposed. Switching from mercury vapor to LED alley lighting will save on energy usage and maintenance costs. It is also becoming more difficult and expensive to procure mercury vapor lamps as more efficient and less polluting types of lighting fixtures have entered the market. Although it is still legal to purchase mercury vapor lamps, the United States banned the sale of mercury vapor ballasts in 2008. According to the ban, existing fixtures can remain in service but, as they burn out, they must be replaced with newer, more efficient lighting alternatives. Currently staff is replacing mercury vapor with metal halide ballasts until they can switch over to LED lamps and fixtures.

Current Status:

In In 2019 and 2020, 2,500 residential low level street lights were replaced with new LED lights. In 2023 the Village awarded a construction contract to replace the 1,050 alley lights with new LED dark sky compliant fixtures. Work is anticipated to be completed in the fall of 2023. Based on current ComEd grant programs, the Village anticipates receiving a rebate of approximately \$90,000 once all of the alley fixtures are installed in 2023. This project was originally budgeted using Sustainability Funds, but due to lack of available funds in the Sustainability Fund, the project is being financed with the Capital Improvement Fund since the alley lights are at at end of their existing service life and the Village will receive approximately \$90,000 in revenues to offset these expenses. This project aligns with Climate Action Plan Goals PE03 to reduce light pollution as it features dark sky fixtures.

Description:

This project involves replacing older high level (tall) roadway lights with more energy efficient equipment.

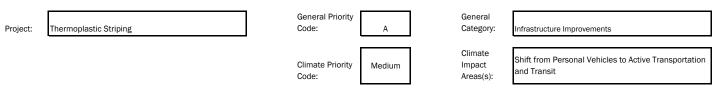

Justification:

A replacement program of the older residential roadway street lighting. Switching from mercury vapor to LED lighting will save on energy usage and maintenance costs. It is also becoming more difficult and expensive to procure mercury vapor lamps as more efficient and less polluting types of lighting fixtures have entered the market. Although it is still legal to purchase mercury vapor lamps, the United States banned the sale of mercury vapor sallasts in 2008. According to the ban, existing fixtures can remain in service but, as they burn out, they must be replaced with newer, more efficient lighting alternatives. Currently staff is replacing mercury vapor with metal halide ballasts until they can switch over to LED lamps and fixtures.

Current Status:

In In 2019 and 2020, 2,500 residential low level street lights were replaced with new LED lights. In 2023 the Village awarded a construction contract to replace the 1,050 alley lights with LED. In 2024 a study into which light the Village would like to use for the LED roadway replacement. The Village has around 2,200 high level street lights that will be evaluated and prioritized for replacement likely over a two year period starting in 2025. ComEd has an energy efficiency rebate program that would likely be utilized to reimburse the Village for a portion of the project. LED lighting improvements align with the Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians. This project aligns with Climate Action Plan Goals PE03 to reduce light pollution as it features dark sky fixtures.

	Total:	-		-			25,000	750,000	750,000	-	-

Description:

The Village re-stripes a portion of its streets each year in order to maintain their visibility using a material called Thermoplastic. Work will also include refreshing the striping and symbols used for bike lanes and "share the road" pavement markings.

Justification:

Thermoplastic pavement markings typically lasts up to seven years for the initial installation on a new road then about three to five years for subsequent restriping depending on traffic and weather. This material holds service life longer than using painted pavement markings. The project aligns with Climate Action Goals VT01-2 and VT06 to improve pedestrian safety at crossings and reduce traffic collisions with pedestrians

Current Status:

This program was previously done every other year. Public Works would like to start doing this every year to upgrade pavement marking for the safety of pedestrians and drivers. The scope of the work to be performed in 2023 includes crosswalks and stop bars near school areas and restriping Jackson and Ridgeland Ave.

	Total:	49,294	-	50,000	50,000	130,000	50,000	50,000	50,000	50,000	50,000

Description:

Purchase and installation of traffic control devices, signs, banners and larger improvements to slow or calm traffic and improve safety. Traffic calming improvements are installed at locations based on resident requests and petition processes to reduce speeds and increase safety. Improvements consist of a variety of treatments including alley speed bumps, pedestrian crossing signs, traffic islands, stanchions for creating temporary diverters and islands, etc. Traffic calming also includes the installation of rapid rectangular flashing beacons and pedestrian activated blinking crosswalk signage for improving the safety of pedestrians on busy streets. Staff is proposing installing these at higher volume pedestrian crossings, near schools and parks, where vulnerable populations (children or elderly) have to cross major streets.

Justification:

Traffic calming improvements that are not as expensive or have less of an impact to the overall character of a neighborhood are typically installed based on requests if they are justified. Larger more costly improvements are done via petition processes and traffic studies to warrant their installation. Special Service Areas may be used to fund permanent installations for larger improvements and would be budgeted for in the following year. The project aligns with Climate Action Goals VT01-2 and VT06 to improve pedestrian safety at crossings, reduce traffic collisions with pedestrians, and allow residents to request calming improvements to the Slow Streets Program. Staff will also pursue funding opportunities to conduct an accessibility review and include necessary improvements MA requirements at requested locations to incorporate Climate Action Goal VT08.

Current Status:

This is an annual program for calming traffic and implementing recommendations for traffic calming from the Village Board based on resident petitions and recommendations from staff. In 2023 numerous traffic calming improvements were installed as part of the resurfacing of various streets project and funds are shown on that CIP sheet. The FY2024 Budget include funds for traffic calming improvements as recommended by staff and as approved by the Board through the traffic calming petition process. There are currently 9 traffic calming items (based on 14 petitions) that are waiting to be processed by the Transportation Commission and Village Board. The 2024 Budget includes funds based on an estimated cost of approximately \$25,000 for implementing recommended improvements per traffic calming item being reviewed. In 2025 additional funds are shown for implementation of recommendations from the Vision Zero Plan. In 2023 the Village hired CivilTech to oversee the petition process and funds are included in the General Fund for these services.

Description:

The pedestrian roadway lights and beacon warning lights were upgraded to LED on the rest of the viaducts in 2019 except for the Village's side of the viaducts located at Austin Blvd and Harlem Ave which still need to have LED wall packs installed. These and the viaducts at, Home Avenue, Clinton Avenue, Kenilworth Avenue, Euclid Avenue, East Avenue, Scoville Avenue, Harvey Avenue, Lombard Avenue and Humphrey Avenue need to have the old conduit replaced. The existing control and junction boxes will also need to be replaced with new waterproof boxes.

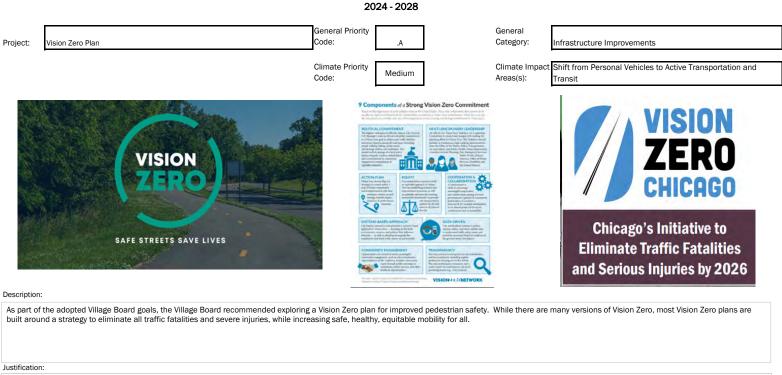

Justification:

Most of the lighting was replaced. Repairs are needed on Marion Viaduct lighting for various reasons, damaged and vandalism. Due to the costs, we were not able to replace the conduit and control & junction boxes at that time. We have been able to temporarily patch some viaducts as needed, but a permanent replacement is needed.

Current Status:

Work in 2023 is being deferred to 2024 due to other priorities.

A Vision Zero plan can be a tool and planning document to improve pedestrian and bike safety and to develop a comprehensive approach to traffic calming throughout the Village. This plan aligns with the Climate Action Plan Goals VT01-2 to address safer pedestrian crossings, reduce driving speeds and vehicle conflicts with cyclists and pedestrians.

Current Status:

Project:

The Village was awarded a State Research and Planning grant of \$120,000 to develop a Vision Zero Plan. The Village awarded an agreement with Sam Schwartz in May of 2023 for \$187,620 for creating the plan. Work started in late July of 2023 and will continue until the fall of 2024. The Village will pay for the work and be reimbursed by the State up to \$120,000.

Project:	Washington and Oak Park Ave Intersection Improvements	General Priority Code: A	General Category: Infrastructure Improvements	
		Climate Priority Low	Climate Impact Areas(s):	
Description:				
Widening	f the intersection on Washington to accommodate left turn ba	ays to improve traffic flow and reduce congestion. Wo	k will require replacing the existing traffic signal and sidewalk ramps.	
Justification				
developme	ent, the intersection of Washington Boulevard and Oak Park Av	venue will need to be widened to accommodate left tu I to accommodate the modified emergency route with	e of Euclid Avenue and partial closure of Wesley Avenue as part of the Pete's Fresh rn bays to reduce traffic congestion and will also require traffic signal replacement the Euclid closure. Vehicle idling in congested areas contributes to greenhouse ga	. GPS based

Current Status:

The Village will started working on coordinating this project with IDOT in 2022. Based on IDOT requirements the design of the project is approximately \$300,000. Due to high costs for design, staff deferred this project for full signal replacement until 2026 while the Village works with IDOT to potentially take over jurisdiction of the road which will lower design costs. The 2024 project only includes the installation of GPS emergency preemption equipment. GPS preemption equipment will be salvaged and reused with a future signal project here.

Description:

When the Village receives State or Federal funds to construct various improvements, typically the State pays for the construction up front and invoices the Village for the local share of the work which is typically at an 80/20 rate. The State can take several years to send final invoices for projects. This sheet is used for old projects, that because of their age, do not have a separate project sheet.

Justification:

The Board previously approved the various projects and entered into Local Agency Agreements with the State of Illinois for the projects and cost sharing responsibilities.

Current Status:

Work is complete on all of the projects. IDOT sent the final invoice for the Village's share of the 2014 Traffic Signal Project in 2023.

Village of Oak Park Madison TIF Fund Project Sheet 2024 - 2028

Priority Code: N/A

Category:

Description:

Work includes the resurfacing of Madison Street from Harlem Avenue to Oak Park Avenue and from East Avenue to Austin Boulevard as well as pavement markings to create a road diet for the entire length of Madison Street from Harlem Avenue to Austin Boulevard. Streetscaping and redevelopment work from Oak Park to East Ave according to the RDA will be completed under a separate project and is shown on a separate sheet. The street resurfacing and road diet project includes spot safety improvements at Kenilworth Avenue, Scoville, Cuyler, Humphrey, and other intersection crossings as well as sewer rehabilitation with lining and small sections of sewer main replacement. A separate project to implement traffic calming on the parallel streets of Jackson and Washington Boulevards as well as side streets in shown on a separate project sheet.

Justification:

Madison Street was last resurfaced in 2005 and is in need of resurfacing. This project is in alignment with the Village Board's plan for improvement of this corridor.

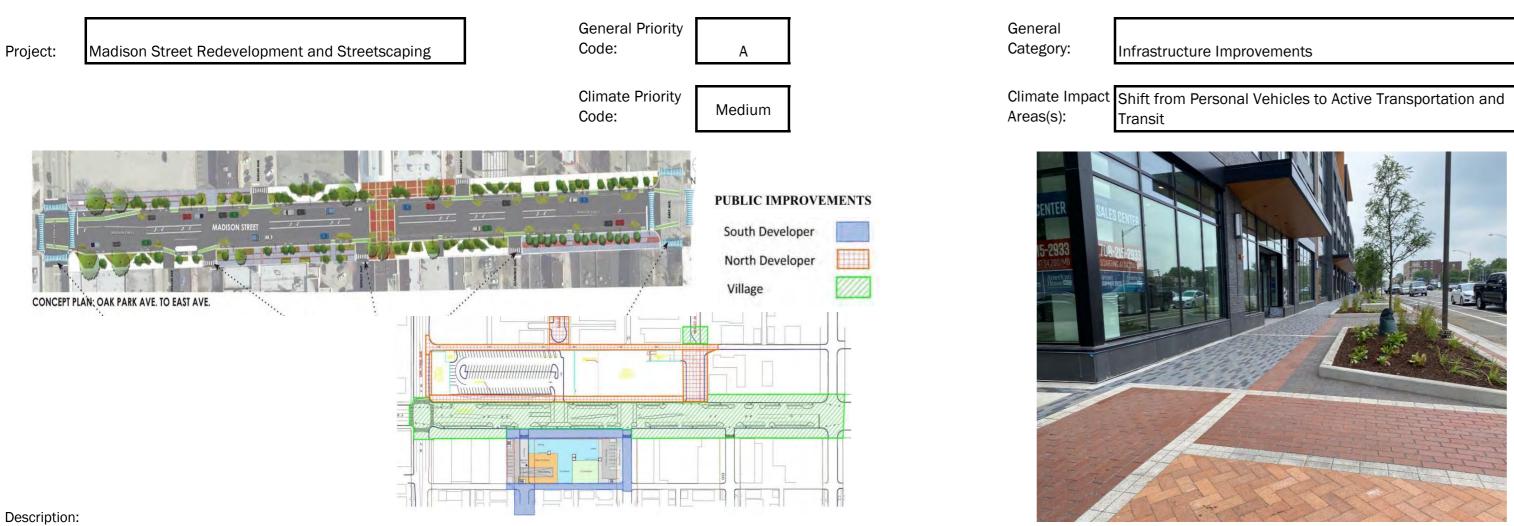

Current Status:

The Village Board awarded the construction contract for the resurfacing and road diet in November of 2018. In July of 2019 the Village Board approved adding scope to replace deteriorated brick parkways from Humphrey to Austin. Construction was substantially completed in 2019 with punch list work substantially completed in 2020.

Infrastructure Improvements

Village of Oak Park Madison TIF Fund Project Sheet 2024 - 2028

The Village approved a Redevelopment Agreement in December of 2018 which includes the transfer of Village owned parcels at 700-728 Madison Street and right-of-way, the creation of a Pete's Fresh Market on the north side of Madison Street east of Oak Park Avenue, a senior living center on the south side of Madison, and for street resurfacing, streetscaping, and utility improvements on Madison from Oak Park Avenue to East Avenue. The Village previously completed conceptual streetscape designs and utility improvements that will be used as the basis of the design which will be refined and completed in coordination with the redevelopments' designs. Work includes street resurfacing, street lighting replacement, enhancements to the sidewalk and parkway areas, improved pedestrian crossings, and creating protected bike lanes. Redevelopment activities include utility relocation, environmental remediation, alley replacements, installations of cul de sacs, and miscellaneous site improvements.

Justification:

This project is in alignment with the Village Board's plan for improvement of this corridor. To improve the safety and appearance of the Madison Street business district, encourage development, and replace deteriorating infrastructure. The project also aligns with Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians.

Current Status:

The Village approved the RDA in December of 2018. The Redico senior living center work was completed in the late summer of 2022. Pete's Fresh Market is currently having utility relocation work occurring with plans to start foundations in the fall of 2023 for an anticipated opening in the fall of 2024. The State approved the grant agreement for the \$1,250,000 in DCEO funds in the summer of 2023 and the State awarded an additional \$600,000 in DCEO funds for 2024 as part of the 2024 State Budget. The streetscape project was bid and scheduled for award in October 2023. The Village Streetscape project has a construction cost of \$7,124,631 and a construction management cost of \$512,926. Construction is planned for late 2023 and ending in October 2024. Costs for CIP Fund for Streetscape also include \$274,692 for Pete's reimbursement per RDA and \$203,682 for Redico reimbursement per approved agreement from June 2022.

Village of Oak Park Madison TIF Fund Project Sheet 2024 - 2028

Description:

The project involves the environmental remediation work at the Lexington Development site associated with a former dry cleaners as the Village is responsible for the environmental remediation costs per the Redevelopment Agreement and Environmental Remediation Agreement.

Justification:

To improve the safety and appearance of the Madison Street business district and to encourage development.

Current Status:

Environmental remediation work is complete with final closeout with the IEPA still pending.

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project Complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. **Medium=** Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact. **None=** Not included as a recommendation in Climate Ready Oak Park.

Description:

Reconstruction of alleys in deteriorated condition. Existing alleys are completely removed and replaced with new concrete alleys which have an inverted crown to improve drainage in the alley and backyards. Some alleys require storm drains and sewers due to flat topography. Grants are typically applied for to fund the additional costs for permeable alleys. Permeable alleys typically cost around 25%-50% more than traditional concrete alleys depending on the soil types and need for drainage. Typical concrete alleys cost approximately \$165,000 to \$225,000 per alley for a north-south alley depending if storm sewer are needed.

Justification:

Alleys provide the primary means of garage and parking access for the majority of residents as well as being used for refuse collection. Staff will pursue grant opportunities for installing green alleys with permeable pavements for alleys already identified for replacement based on condition in areas with sandy soils in alignment with the Climate Action Plan Goal GI02 to increase investment in green infrastructure and other resiliency projects.

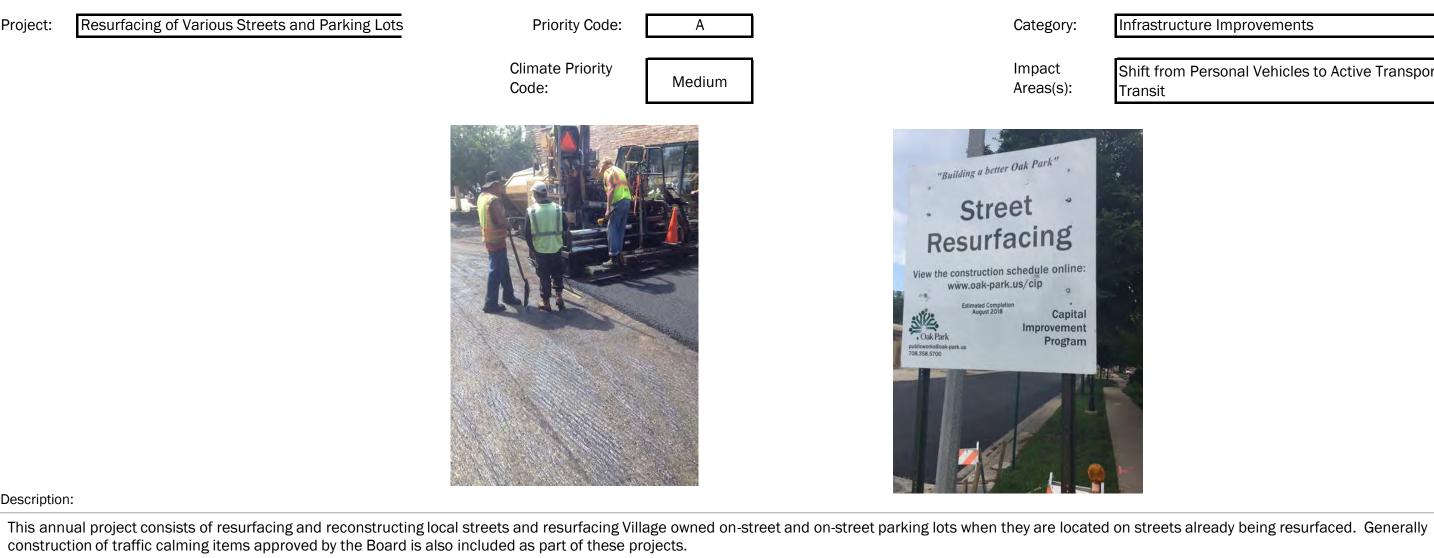

Current Status:

The 2020 and 2021 Alley project was canceled due to budget impacts from COVID-19. The 2022 project included a \$475,000 grant from MWRD for four green alleys. Alley pavements were re-evaluated in 2022 and updated condition scores are being used to determine future alley replacement priorities. In 2023 CDBG funds were removed from the alley project and the 3 alley segments deferred until 2024 due to HUD requirements and CDBG funds were increased in 2024 to account for this. The Village received MWRD funding for constructing 4 green alleys in 2024. Costs related to the construction of the green alleys are shown in the CIP Fund account for sustainability. The 2024 alley project also includes the replacement of the parking lot and pavements adjacent to the North Fire Station (Station 2) since the adjacent alleys are being replaced. Costs for the Fire Station Parking Lot are shown in the CIP Building Improvement Fund sheet for this project.

Description:

Project:

Justification:

Local streets should be resurfaced every 15-20 years to maintain the deeper layers of asphalt, concrete or stone bases. Streets already deteriorated need to be reconstructed with deeper layers of asphalt or new base courses to restore their structural integrity. Staff will pursue grant opportunities for installing permeable pavement on deteriorated roads marked for reconstruction in alignment with Climate Action Goal GI03 to invest in green infrastructure and reduce the number of impervious surfaces in the Village.

Current Status:

In 2020 and 2021 there was minimal street resurfacing due to reduced budgets associated with COVID. The 2022 project includes using \$1.75M in State DCEO grant funds and work was completed in the summer of 2023 due to material delays and labor strikes in 2022. In 2023 and going forward CDBG funds have been removed from this project due to HUD requirements for environmental reviews. Due to loss of approximately \$400,000 in CDBG funding and increased construction costs, 2025 and future years' budgets have been increased beyond the previous amount of \$2M for local street resurfacing in order to maintain the condition of the roads.

Infrastructure Improvements

Shift from Personal Vehicles to Active Transportation and Transit

Description:

This project consists of public sidewalk replacement. Primary funding is through Community Development Block Grant (CDBG) Funds since most work is an eligible expense for Americans with Disabilities Act (ADA) improvements. The project includes additional public right-of-way sidewalk that is not supported through CDBG funds such as carriage walks, 50-50 requests, project specific repairs and sidewalk cutting. Sidewalk cutting eliminates trip hazards by angle cutting sidewalks with elevation differences instead of full replacement, which will be utilized around schools and businesses to avoid the impacts from traditional concrete replacement.

Justification:

This project is critical for improving accessibility, pedestrian safety, and in complying with the ADA. The scope of the project aligns with Climate Action Plan Goals VT01-2 and VT08.

Current Status:

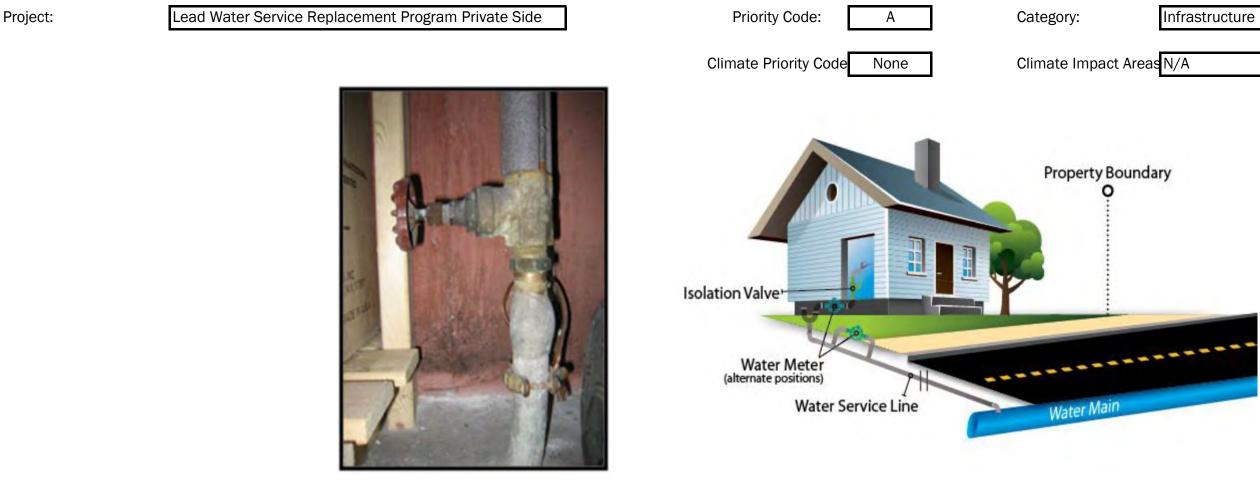

The 2022 sidewalk project was primarily constructed in the late spring of 2023 due to concrete shortages. The 2023 sidewalk project is planned for construction in the fall of 2023 and focuses on sidewalks along the east-west streets in the south half of the Village. The 2024 project will address the remaining east-west sidewalks needing replacement in the south half of the Village as there are more locations than could be completed with the 2023 CDBG budget along with north-south sidewalks generally in the SW quarter of the Village.

Infrastructure Improvements

Shift from Personal Vehicles to Active Transportation and Transit

Description:

Illinois law requires communities water suppliers to establish a program to remove lead water services (both public side and private side) from the water system over a period of time. This program funds the private side lead water service replacement for income qualified properties in situations where the Village would already be replacing the public side of the service as part of a separate project.

Justification:

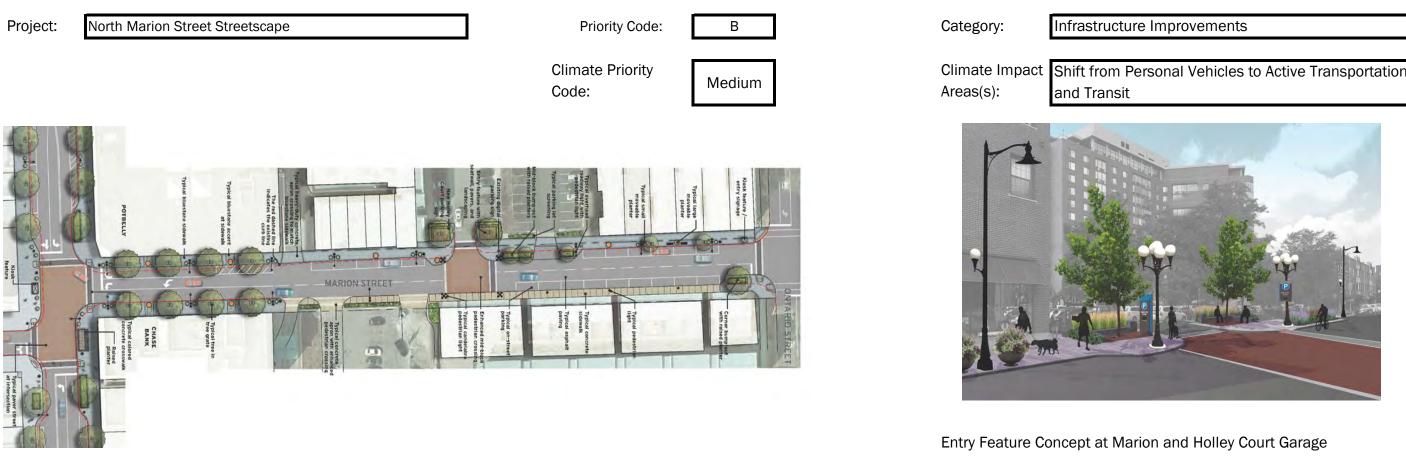

The State does not want income to be a barrier to prevent replacement of lead service lines. This program addresses this requirement form services where the public side is already being replaced as part of a separate project.

Current Status:

A construction contract is anticipated to be awarded in the fall of 2023 to replace private side water services for income qualified properties using CDBG funds. Depending on bids received costs can range from \$7,500 to \$12,500 for the work to replace the private side water service per property under this program.

Infrastructure Improvements

Description:

This project consists of installing streetscaping on the block of North Marion Street from Lake Street to Ontario Street to complete the last portion of DTOP along with sewer improvements to improve the capacity and reduce basement backups in portions of DTOP. The proposed scope includes new street and pedestrian lighting with outlets, traditional concrete sidewalks and curbs, asphalt resurfacing, crosswalk enhancements by Holley Court, pedestrian improvements at Ontario, street furniture, and sewer improvements. The scope was reduced to eliminate bluestone north of Holley Court and the bank.

Justification:

The streetscaping work was added to the design of the Lake Street Streetscape project by the Village Board in January of 2016. The construction of this one block was removed from the scope of the Lake Street project by the Village Board in 2017 to reduce the cost of the Lake Street project. Completing the streetscape on this block would complete the streetscape and unify the aesthetics for all of DTOP. Sewer improvements to interconnect two parallel sewers on Marion and extend a sewer south of the alley will improve capacity to buildings in DTOP.

Current Status:

Engineering design is substantially complete. The project is currently planned for construction in 2025 to avoid major impacts to parking in DTOP since Lot 10 is planned for replacement in 2024.

Ridgeland Avenue Resurfacing	Priority Code:	A	Category:	Infrastruc

Description:

This project includes the resurfacing of Ridgeland Avenue from Augusta Street to North Avenue, sidewalk corner ramp improvements to meet current ADA requirements using CDBG funds, a bike & ped activated flashing beacon and crossing enhancements at Lemoyne, and traffic signal modernization of the existing older signal at the Division Street intersection. Ridgeland Avenue is an unmarked State highway from Roosevelt Road to Augusta Street. The Village received a grant of \$944,000 for construction and \$140,000 for construction engineering of Federal Surface Transportation Program (STP) funds for the resurfacing of Ridgeland from Augusta to North Ave. The STP funds will cover 80% of the costs for eligible items with MFT funds being used to fund 10% of the construction costs. Design is locally funded to avoid delays with IDOT. Construction costs are estimated at \$1,450,000 (\$944,000 fed STP, \$253,000 MFT, \$178,000 CIP, and \$75,000 CDBG) and the State will pay for construction and invoice the Village for the MFT and local share. The Village will pay for construction engineering and be reimbursed by the State for 80% of the costs.

Justification:

Ridgeland from Division to North Avenue was last resurfaced in 2010 and the pavement will be in need of resurfacing. Ridgeland south of Augusta was resurfaced in 2015 and is in good condition and does not need resurfacing and STP funds can only be used on the Village owned portion of Ridgeland north of Augusta. Some of the traffic signal equipment at Division is very old and is nearing the end of its useful life and will be replaced and modernized with this project. The crosswalk and signal improvements for this project align with Climate Action Plan Goals VT01-2 and VT08 to address safer pedestrian crossings and improve ADA compliance

Current Status:

Construction is planned for 2026. Design work will start in 2024 since the project will be administered by IDOT because of the federal funding.

Village of Oak Park Community Development Block Grant Fund Project Sheet 2024 - 2028

Description:

Project:

This project includes the addition of a community restroom in the downtown Oak Park area, census tract 8123.01 Block 2.

Justification:

The goal of the community restroom is to provide individuals access to a safe, clean restroom while in the Oak Park community. The initiative of having a community restroom has been raised over the last five years through the Oak Park Coalition to End Homelessness when there is limited access to restrooms due to seasonal operations. Access to restrooms became more limited during the COVID-19 Pandemic when businesses and public organizations were closed and did not allow individuals access to restrooms. Access to a restroom from a community and tourist standpoint is a benefit to public health. This will reduce the strain on private, local businesses to allow access to restrooms. The community restroom will impact all Village of Park residents and guests. This restroom will offer 24/7 access to a public facility, including a changing table, ADA compliances, and a sharp object discard.

Current Status:

This Village bid this project in the winter of 2023 and received two bids with the low bid of \$468,848. Since the cost of the project greatly exceeded the budget, the project has been canceled.

SUSTAINABILITY FUND #2310

EXECUTIVE SUMMARY

The Village Manager's Office oversees sustainability initiatives and this Fund was established in 2009 with grant funds for the hiring of a position to support sustainability efforts in the Village. After the grant expired, all sustainability related costs have been provided via a transfer from the Environmental Service Fund which generates revenue from waste hauling fees.

Beginning in 2016, as part of the Village's Community Choice electrical aggregation program, a .003/kWh local fee to support the Smart City USA renewable energy projects within the Village was established. That revenue is currently estimated at \$400,000 per year.

Future project costs will be transferred to the FY24 operational budget.

Priority Scale: General

A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety D= Optional but beneficial to the Village in social, cultural or aesthetic ways

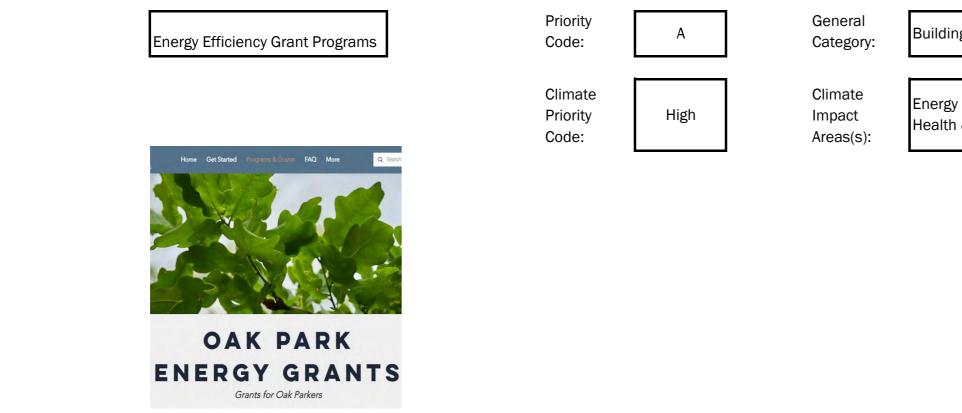

F= Future project, no 2024 expenditures

N/A= Project Complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. **Medium=** Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact. None= Not included as a recommendation in Climate Ready Oak Park.

ty, etc.			

Sustain Oak Park energy info hub

Description:

Project:

Unspent grant funds for LMI energy grants from 2023 will be re-allocated to the 2024 operating budget for future LMI energy grants. The income-qualified grant program provides up to \$10,000 in financial assistance to income-qualified Oak Park residents and owners of apartment buildings of up to 7 units, to install insulation, energy efficient lighting, upgraded water heaters, high-efficiency shower/faucet upgrades, improved air sealing, thermostat upgrades and solar panels. The installation or upgrade of heating, venting or air conditioning and geothermal installation is also eligible. The program is administered by Neighborhood Services staff, in coordination with technical services from an external partner, CEDA. In addition, the Village continues to supports all residents in conducting home energy upgrades by promoting external solar energy and energy efficiency savings programs, including Cook County's Solar Switch Chicagoland, Grow Geo Chicagoland, and ComEd's appliance rebates. Village Staff are exploring alternative funding options for energy grants, which do not solely rely on Sustainability Fund reserves.

Justification:

This project is in alignment with the Climate Ready Oak Park plan, specifically AEO3 (Dedicate at least 40 percent of Community Choice Aggregation revenue to clean energy and climate retrofits for highly vulnerable community members.) and BDO3 (Implement an outreach and education program to raise awareness and connect residents, businesses, institutions, and property owners with technical and financial services for energy and climate resiliency upgrades, including federal, State, and utility programs.) Project focus areas will be determined in alignment with the Oak Park social vulnerability maps, e.g., poverty, rent burden.

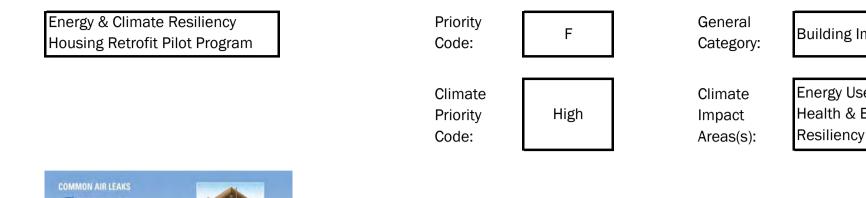

Current Status:

Ongoing.

Building Improvements

Energy Use in Buildings & Housing; Community Health & Environmental Quality

Project:

Description:

Project costs are being transferred to the FY24 operating budget. The Viillage will use a human-centered design to co-create and launch a pilot program for coordinated weatherization, energy efficiency, clean energy, electrification, and climate resiliency housing upgrades. Program enrollment will prioritize highly vulnerable community members. The program will seek to serve all housing types and include provisions to maintain housing affordability. Following the completion of the design phase, the program will be implemented by Neighborhood Services.

Justification:

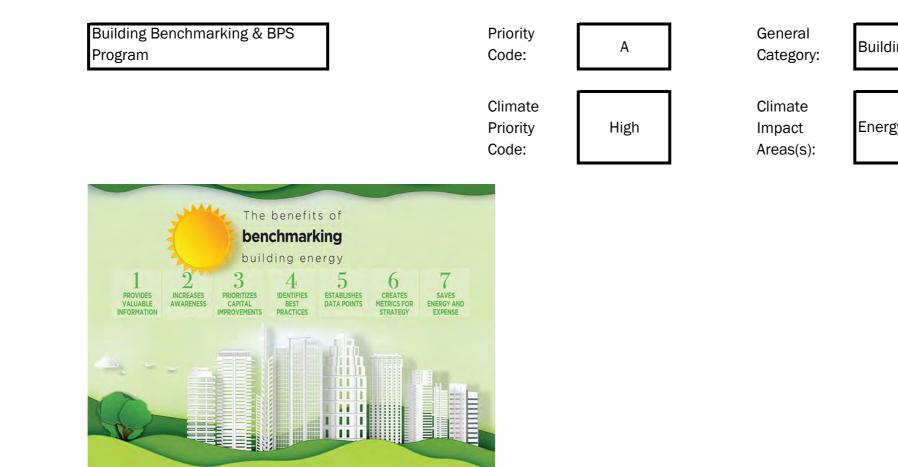

This project is in alignment with the Climate Ready Oak Park plan, adopted in 2022, specifically actions: BD06 (Implement an enhanced "one-stop shop" program to provide coordinated energy, resiliency, and health housing retrofits for highly vulnerable community members. Include terms to maintain permanent affordability.); EN03 (Set a goal to transition natural gas units in all existing buildings across the Village to electric units.); AE01 (Conduct...user-centered design for Village housing and building assistance programs funded by public dollars.) and AE03 (Dedicate at least 40 percent of Community Choice Aggregation revenue to clean energy and climate retrofits for highly vulnerable community members.) Program outreach will be conducted in alignment with the Oak Park social vulnerability maps, e.g., poverty, rent burden.

Building Improvements

Energy Use in Buildings & Housing; Community Health & Environmental Quality; Extreme Weather & Resiliency

Description:

Program costs are being transferred to the FY24 operational budget. This project administers a community benchmarking program for large buildings, to track energy use, water use, and waste streams. The project administers the benchmarking processes and platform and provide training for Village staff and Oak Park property managers, and outreach for voluntary energy benchmarking for properties not subject to the benchmarking ordinance. In 2023, pro bono technical assistance support for benchmarking training and software was secured through grant-funded partners. The next phase of the project will develope a proposed building performance standard, supported by an already-awarded federal grant for technical assistance.

Justification:

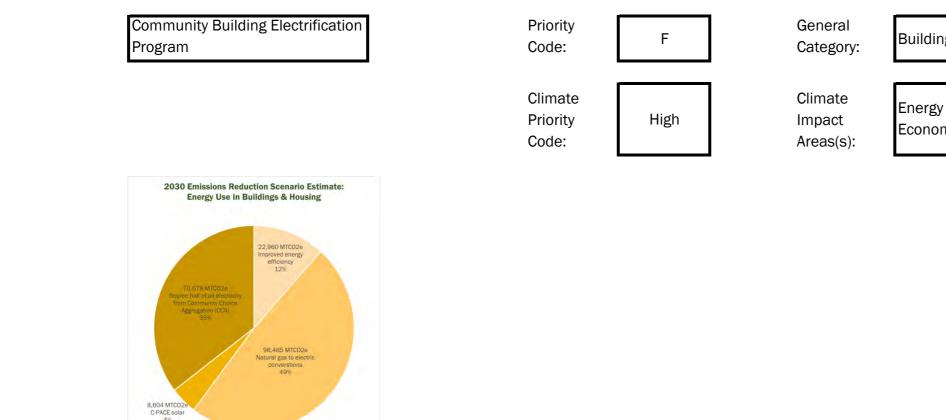

This project is in alignment with the Climate Ready Oak Park plan, adopted in 2022, specifically actions: EN01 (Perform annual mandatory energy benchmarking at all large buildings); DW01 (Adopt a water benchmarking program for all large building); WG02 (Establish a waste benchmarking program for all large buildings). Buildings often achieve an energy and cost savings simply through the benchmarking process. Benchmarking programs enable identification of high-use properties, targeted conservation and efficiency strategies, and compliance with building performance standards for existing buildings. Benchmarking is foundational to achieving substantial reductions in greenhouse gas emissions from buildings.

Building Improvements

Energy Use in Buildings & Housing

Project:

Description:

Project costs are being transferred to the FY24 operational budget. This project will use human-centered design to co-create and launch a pilot program to remove barriers to electrification, for buildings which have previously completed weatherization and energy efficiency upgrades. The program will seek to serve all building types, and all household income levels. Project funding will leverage utility incentives for building energy improvements and other identified funding and financing sources. Following the completion of the design phase, the program will be implemented by Neighborhood Services.

Justification:

This project is in alignment with the Climate Ready Oak Park plan, adopted in 2022, specifically action EN03 (Set a goal to transition natural gas units in all existing buildings across the Village to electric units.) and BD05 (Establish a bulk-purchasing discount program for electric building mechanicals and appliances.) Natural gas unit conversion is a key strategy to achieving 60% greenhouse gas emissions by 2030.

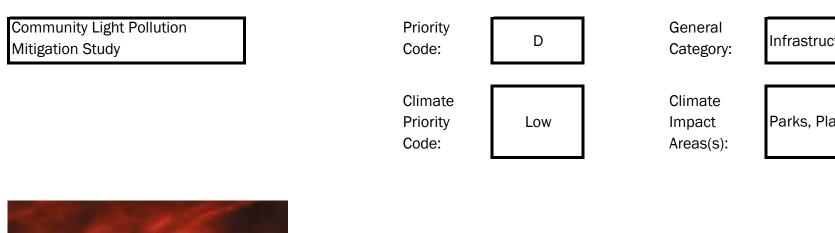

Current Status:
Not started.

BUILDING IMPROVEMENT FUND #3012

Fund Summary

The Building Improvement Fund revenue is transferred from the Capital Improvement Fund. This fund accounts for all expenses related to the repair and maintenance of Village Hall, the Public Works Center, the Village's three fire stations and the Dole Library.

Projects are identified from a Property Condition Assessment report. The purpose of this report is to assess the general condition of building components (structure, roof, HVAC, plumbing, electrical, etc.) in order to develop prioritized repair and maintenance recommendations and budgets for the next ten years.

Although the current focus is on the actual infrastructure improvements, it is not possible to have a valid conversation about the fund's ability to pay for the costs of projects without also discussing the other expenses of the fund.

Below is a revenue and expense table that illustrates the overall fund finances. However, the operational portion, which excludes capital costs, is currently under review and will come before the Finance Committee and Village Board as a part of the operation budget recommendation.

Priority Scale

A= Essential and immediate need **B**= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. Medium= Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact. None= Not included as a recommendation in Climate Ready Oak Park.

General Priority Code:	В	General Category:	Bu
Climate Priority Code:	High	Impact Areas(s):	۲ الم الم

Description:

Project:

Fire Station 1 Mechanical, Electrical, Plumbing,

Structural and Fire Protection System Repairs

This project involves repair or replacement of the mechanical, electrical, plumbing and structural systems (MEPS) at the main fire station over a five-year period. A more detailed description of suggested repairs is identified in the Property Condition Assessment (PCA) that was completed for the main fire station in 2019. Also included would be repairs to the fire protection systems. An updated PCA is being proposed for 2024.

Justification:

The 2019 PCA identified various deficiencies and repair recommendations for the mechanical, electrical, plumbing, structural and fire protection systems at the main fire station. Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

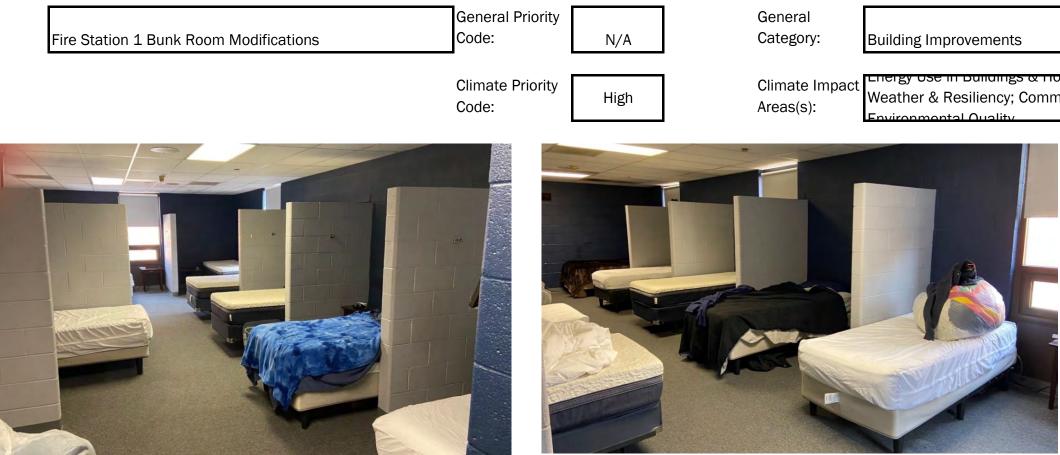

This project includes repairs and/or replacement of various components of the mechanical, electrical, plumbing and fire protection systems. Costs were provided based on information in the 2019 PCA. The following items are being replaced in 2023: two roof top units (AC and electric heating) and associated components for bunk room area (\$110,000). The following items would be replaced in 2024: compressors, fan coils and associated components for two roof top heating and AC systems that serve the first floor office spaces, training room and training office, bathrooms, and basement areas (\$135,000). The following items would be replaced in 2025: domestic water heater (\$5,000), exhaust fans (\$15,000), fire alarm panel and carbon monoxide (CO) detectors (\$15,000) and sprinkler pipe sections (\$10,000). Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs. The four existing AC units at the main fire station are antiquated (still use R12 refrigerant) and are breaking down more and more frequently. The most recent assessment from a mechanical contractor was that the units are not reliable, not cost-effective and are in need of replacement. R12 refrigerant is much less environmentally friendly than modern refrigerants, is very difficult to obtain and is very costly to purchase. New PCAs are being proposed for all three fire stations in 2024. Future costs related to MEP replacements will be identified based on the 2024 PCAs.

uilding Improvements

Resiliency; Community Health & Environmental

Description:

Project:

This project involves modifying the existing bunk room at the main fire station to provide for future female employees, as well as installing new carpeting in all carpeted areas of the building.

Justification:

The existing bunk room at the main fire station does not provide adequate accommodations for female staff. Modifications to the bunk room floor plan, which would include installation of partitions, additional beds and additional lighting would satisfy that immediate need and be beneficial to the Village through increased productivity and morale. The existing carpeting is over 25 years old and is in need of replacement. Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

The Village received bids for this work from general contractors in early 2022. All bids exceeded the available funds in the FY2022 CIP BIF budget so this work was deferred until 2023. Project was re-bid in early 2023 and the intent is to move forward with this project in 2023. The \$25,000 that was budgeted for this work in 2022 was reallocated to cover a portion of the cost for the 2022 South Fire Station Renovation Project. The main station bunk room renovations project also included the replacement of two AC units. That cost is listed separetely in the sheet for Station 1 MEP and Fire Repairs.

Dunuings & Housing, LAUerne Weather & Resiliency; Community Health &

Description:

This project involves renovating the 2nd floor men's shower area at the main fire station to install new showers and allow for more space and a separate area for more women's showers.

Justification:

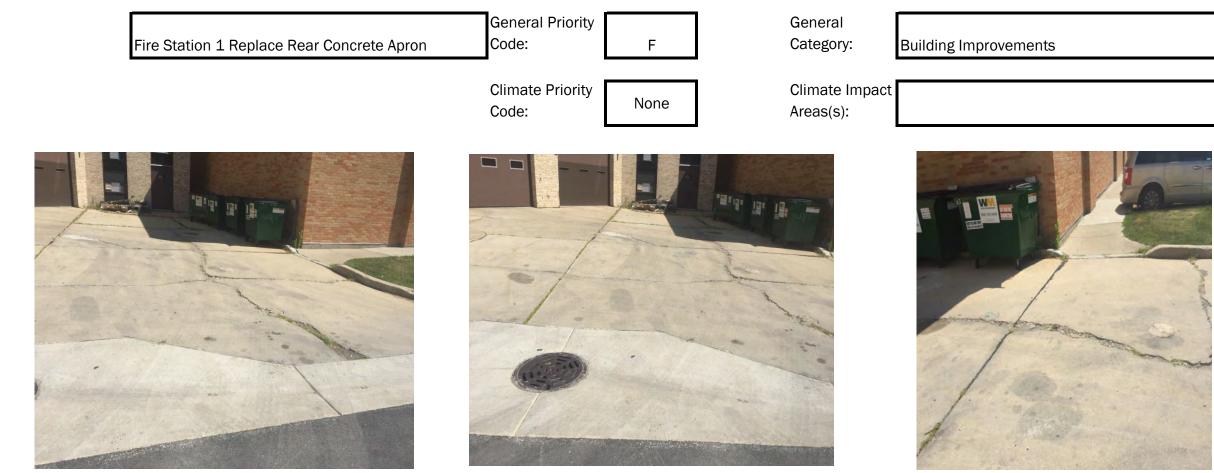

The existing showers in the men's locker room at fire station 1 are original to the building and the plumbing fixtures are in poor condition, and there currently is only one women's shower. Replacement of the showers would be beneficial to the Village through improved appearance and functionality of the showers. The design for this work was initially planned for 2023 but will now be done in 2024 along with the construction. Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

This is a new project.

Project:

Description:

This project involves replacing the existing concrete apron in back of the main fire station.

Justification:

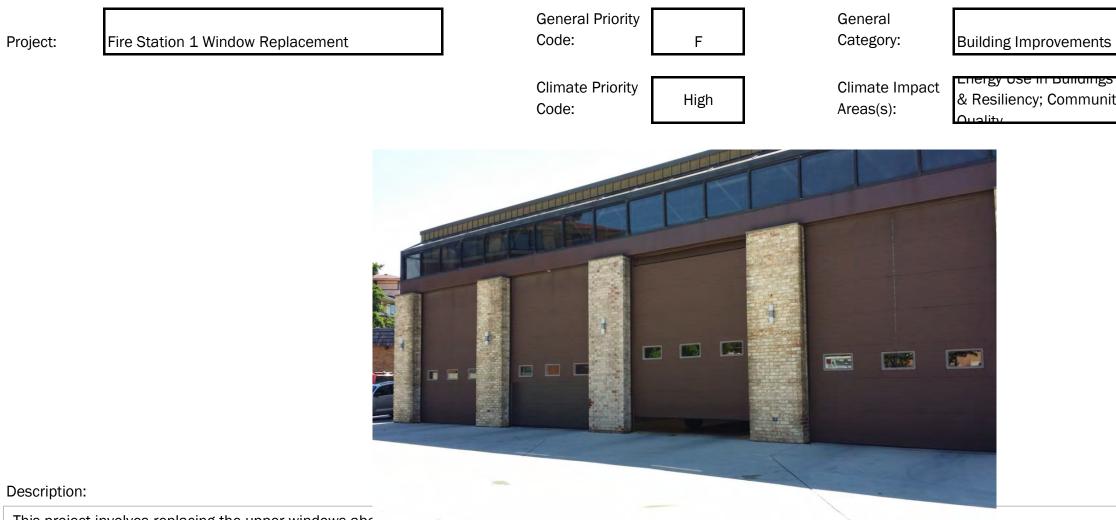

The existing apron is cracked and is deteriorating in several areas.

Current Status:

This is a new project. Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs.

Litergy use in buildings & nousing, Extreme weather & Resiliency; Community Health & Environmental

This project involves replacing the boiler system at the north fire station and potential supplimental heating and cooling for the second floor of the facility that will be energy efficient.

Justification:

The existing boiler system is over 75 years old and is in need of replacement. Supply lines have historically had frequent leaks, and the gas supply line to the boiler creates excessive

Current Status:

The Board directed staff during the last fiscal cycle to engage an engineering firm to further evaluate the building for a geothermal system for future consideration. An assessment was completed by one of the Village's task order engineering firms and based on the cost estimates identified in the assessment for implementing building envelope improvements and installing a geothermal system, the Board directed staff to revisit the boiler replacement and present alternatives to an in-kind replacement, such as down-sizing the new boiler and including some of the building envelope improvements. The proposed 2024 budget amount is based on the estimates provided in the assessment completed by the engineering firm, and includes a new smaller boiler and potential supplemental heating and cooling for the second floor that will be the most energy effecient option.

Description:

This project involves repairing the foundation and basement stairs at fire station 2.

Justification:

The North fire station was built in 1917. The last remodel was in 1985 when exterior windows were replaced, kitchen was upgraded and overhead doors were replaced.

Current Status:

This is a new project. Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs.

Description:

This project involves design and installation of building envelope improvements in preparation for a new mechanical system.

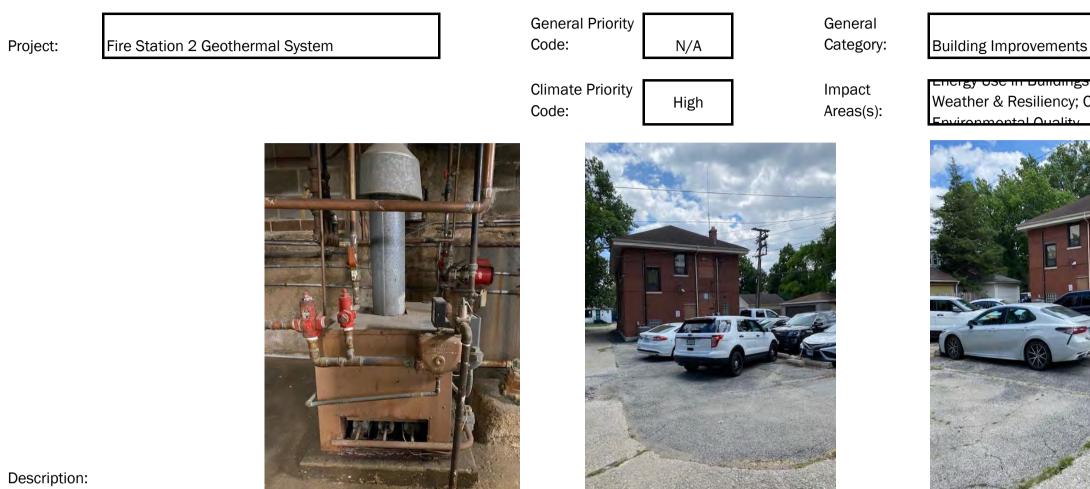

Justification:

The north fire station was built in 1917. The building is in need of a new mechanical system for heating. Building envelope improvements are an integral part of the design and installation of a new mechanical system. The existing structure is clad with 4-inch brick veneer. Behind the brick veneer is a course of concrete masonry units or multiple wythe of standard brick. There is no known insulation in the exterior walls, nor at any openings, and there are no vents in the walls to allow for air flow. Existing walls do not provide much in the way of thermal or moisture protection. The existing roof has no insulation incorporated into the roof assembly. Building envelope improvements should be done either before or in conjunction with the installation of a new mechanical system. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EEO2 - Adopt Enhanced Building Performance Standards.

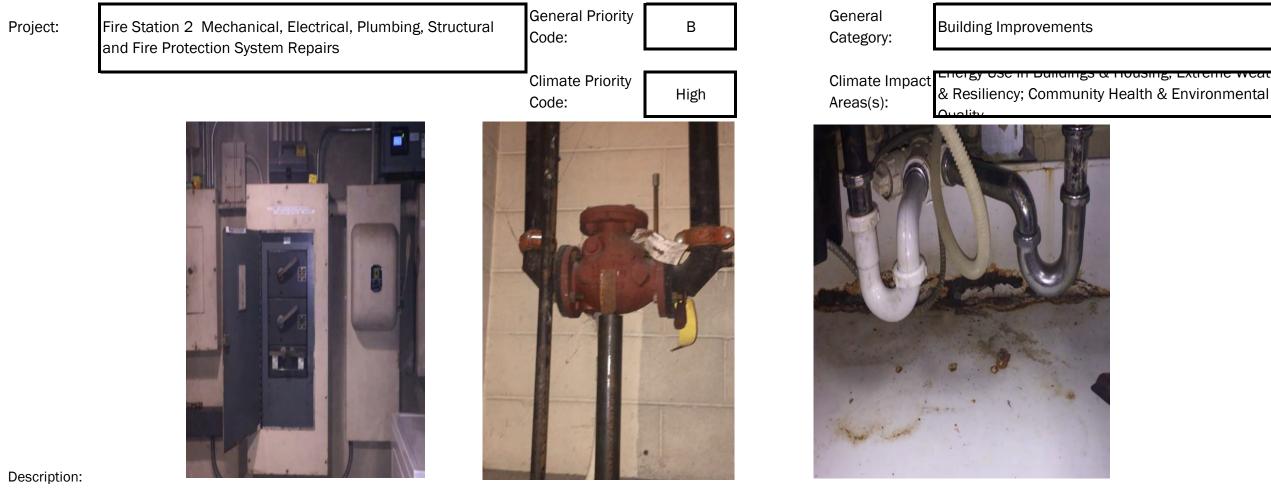

Current Status:

This is a new project. The Board directed staff during the last fiscal cycle to engage an engineering firm to evaluate the building envelope and prepare options for future consideration. The proposed budget amount is based on the assessment completed and represents upgrading the building envelope with additional fiberglass insulation in the attic and the installation of ductwork insulation on the attic air handling unit. There are other options available at different price points. The Budget estimate represents staff's recommendation.

This project involves repair or replacement of the mechanical, electrical, plumbing and structural systems (MEPS) at the main fire station over a five-year period. A more detailed description of suggested repairs is identified in the Property Condition Assessment (PCA) that was completed for the north fire station in 2019. Also included would be repairs to the fire protection systems. An updated PCA is being proposed for 2024.

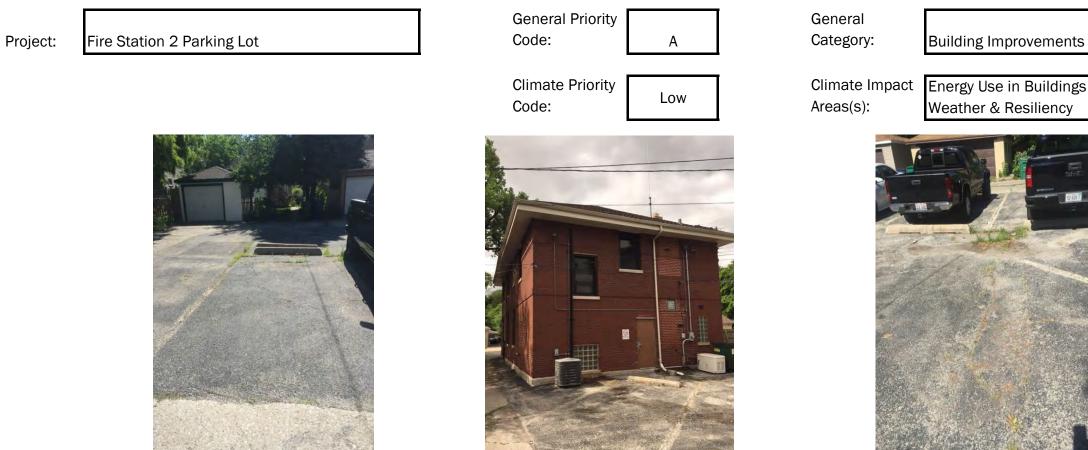

Justification:

The Property Condition Assessment (PCA) of the north fire station identified mechanical, electrical, plumbing, structural and fire protection systems deficiencies in need of repair/replacement/upgrades. Design and engineering will evaluate the potential to transition away from gas powered domestic water heaters in alignment with the Village Climate Ready Oak Park Plan Goal: EN03 - Transition to all electric units.

Current Status:

This is a new project as a result of the PCA completed in 2019. Specific items planned for 2024 include new domestic water heaters with new piping and fixtures. Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs. New PCAs are being proposed for all three fire stations in 2024. Future costs related to MEP replacements will be identified based on the 2024 PCAs.

Description:

This project involves replacing the asphalt parking lot at the north fire station which was built in 1984 and is in bad condition with a new concrete parking lot, or with permeable brick pavers. Parking lot work would be constructed at the same time as the adjacent alley replacement project in 2023 which is replacing the parking lot. Parking lot work would also include replacing paving on the three sides of the fire station building. The Permeable parking lot would be bid as a bid potential environmental work for any unknown tanks is included. A traditional concrete project is estimated at \$45,000 vs. a permeable parking lot estimated proposed alternative is in alignment with the Village Climate Ready Oak Park Plan Goal: GI02 - Pursue Opportunities for Green Infrastructure.

Justification:

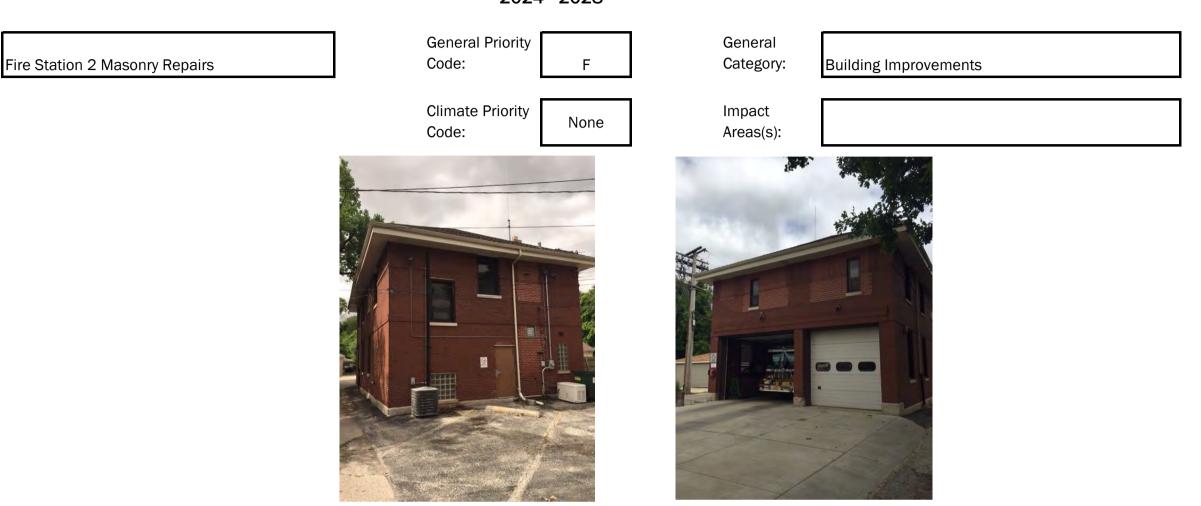

The deteriorating conditions of this parking lot are creating a safety hazard for staff and the public. There is an essential need to repair the parking lot.

Current Status:

This is a new project. This would be done in conjunction to the installation of the adjacent alley project. Should the Village approve a geothermal well field for the coordinated between these projects. Some building foundation work to repair leaks and improve drainage around the exterior perimeter could become a particular investigations by foundation repair companies. The geothermal well system and major foundation repairs and waterproofing are listed as separate projects. Concrete.

Description:

Project:

This project involves tuck-pointing the exterior masonry at the north fire station. Some scope items would include cleaning and painting exposed steel, removing and replacing cracked brick, grinding and pointing, replacing existing downspouts, crack sealing and painting.

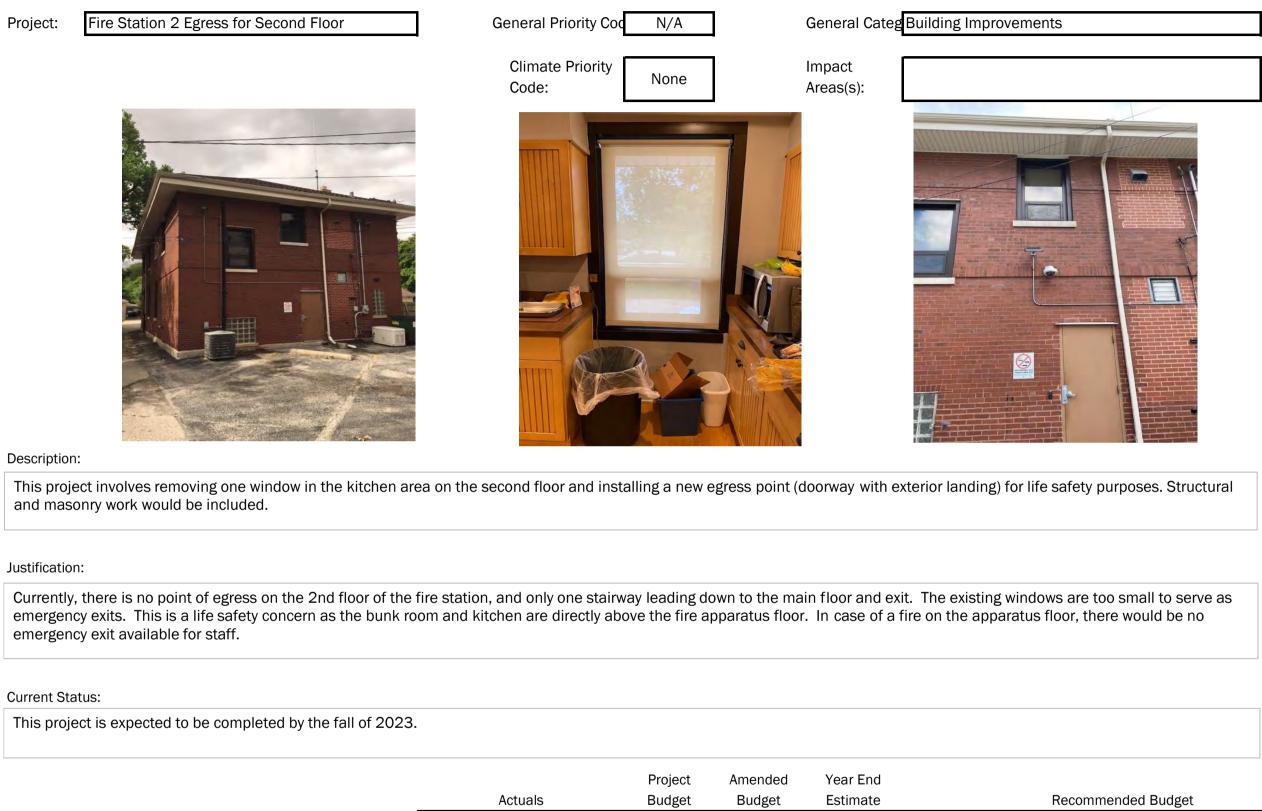

Justification:

To improve the outside appearance and ensure structural integrity at the north fire station.

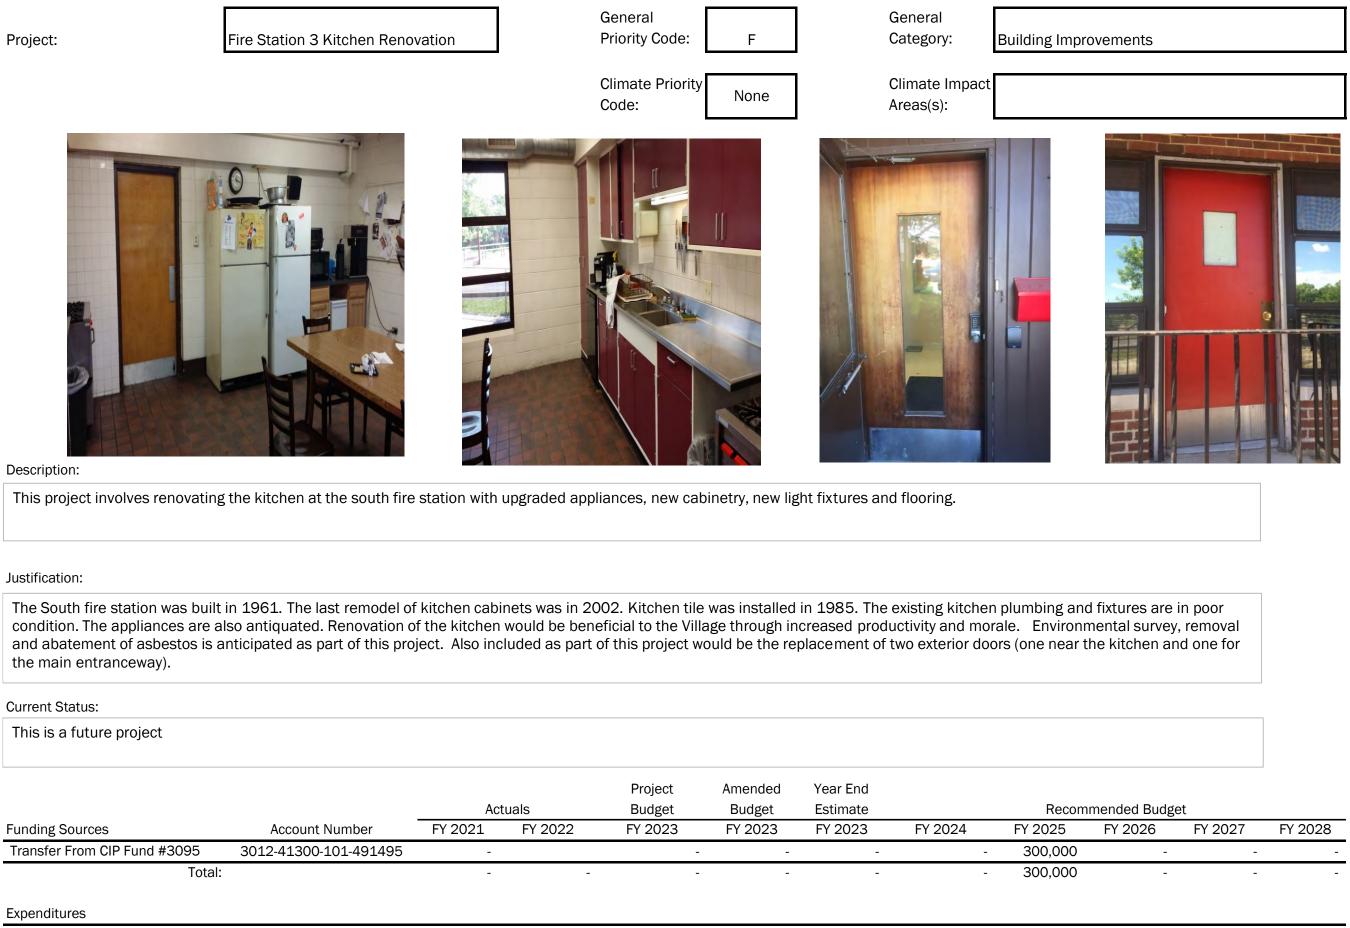

Current Status:

This is a new project. Specific scope items are identified in the Property Condition Assessment (PCA) of the north station which was completed in 2019. Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs. This project may be eliminated if the building envelope improvements are completed in 2024/2025.

Description:

This project involves tuck-pointing the exterior masonry and other exterior repairs at the south fire station.

Justification:

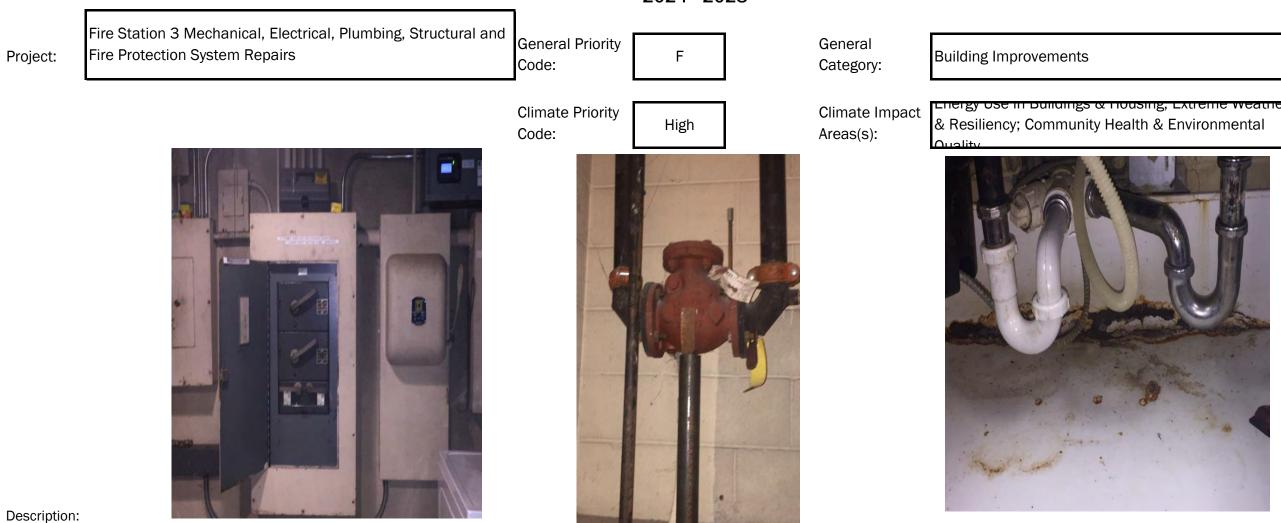

To improve the outside appearance and ensure structural integrity at Fire Station #3. Deficiencies in the exterior masonry and recommended repairs were identistation Property Condition Assessment (PCA).

Current Status:

This is a new project. Scope items included in the PCA include painting exposed steel, replacement of broken masonry, repairing cracked mortar joints, replacen repairs to the chimney, and replacing spalled concrete. Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general concrete these costs.

ified in the 2017 south fire
ment of existing down spouts, ditions are in addition to
ecommended Budget

Description:

This project involves repair or replacement of the mechanical, electrical, plumbing and structural systems (MEPS) at the main fire station over a five-year period. A more detailed description of suggested repairs is identified in the Property Condition Assessment (PCA) that was completed for the south fire station in 2017. Also included would be repairs to the fire protection systems. An updated PCA is being proposed for 2024.

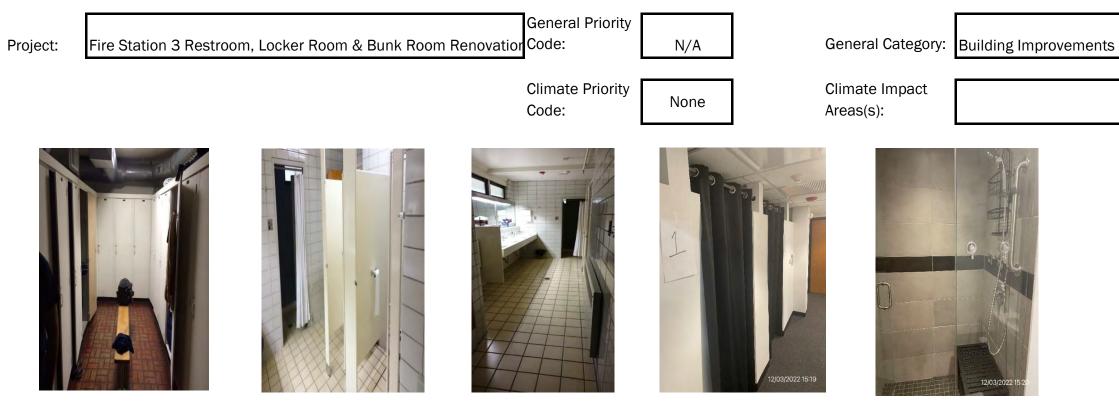

Justification:

The 2017 Property Condition Assessment (PCA) of the south fire station identified mechanical, electrical, plumbing, structural and fire protection systems deficiencies in need of repair/replacement/upgrades. Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

This is a new project as a result of the PCA completed in 2017. Specific items planned for 2025 include new roof top units (\$35,000), new hot water/boilers (\$75,000), new piping and temperature controls and return air locations (\$35,000), sealing of hose tower louvers (\$5,000) and new electrical switchgear (\$25,000). Due to market cost increases, 15% was added to all costs. A 10% contingency and 25% for general conditions are in addition to these costs. New PCAs are being proposed for all three fire stations in 2024. Future costs related to MEP replacements will be identified

Before

After

Description:

This project involved renovating the bunk room, restrooms and locker rooms at the south fire station. The south fire station had a locker room that needed to be divided into men's/women's locker rooms.

Justification:

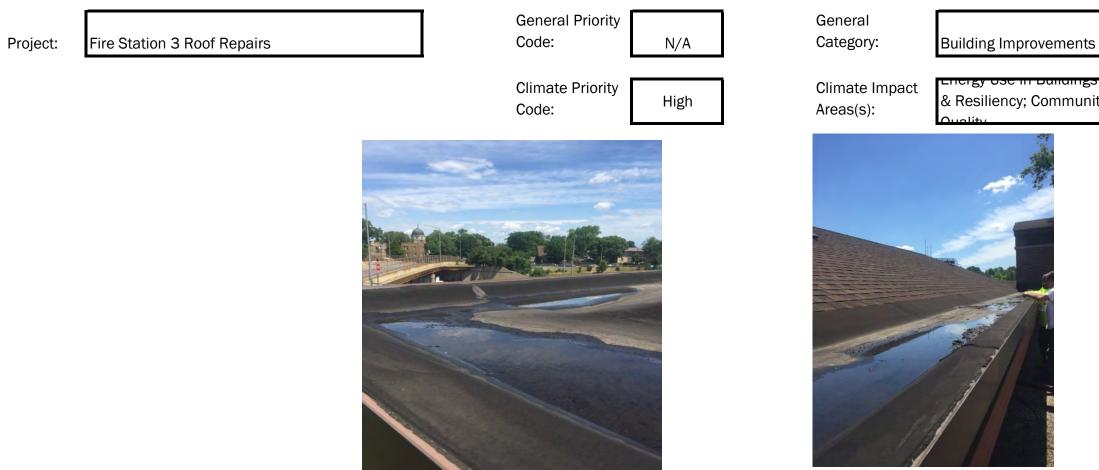

The south fire station had a locker room that needed to be divided into men's/women's locker rooms as there was no women's locker room area in the station. Additionally, the restrooms had been experiencing frequent plumbing issues, and the bunk room area also did not provide space for female employees.

Current Status:

This project has been completed.

Description:

This project involves repairing the roof at the south fire station.

Justification:

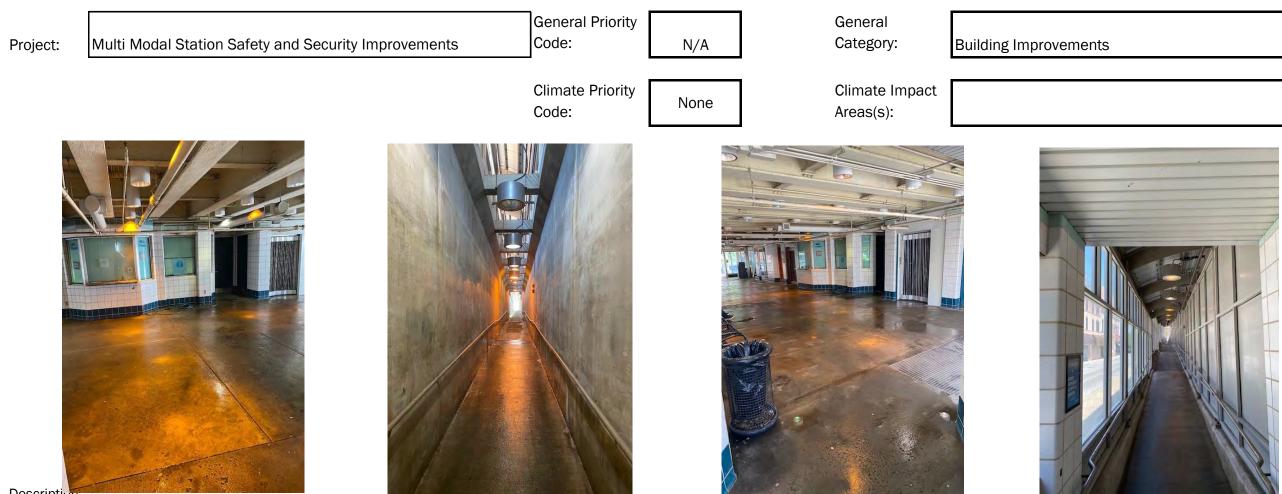

Repairing the roof would be beneficial to the Village through improved appearance and condition of the roof and safety of building occupants. Deficiencies and recommended repairs were identified in the Property Condition Assessment (PCA) completed in 2017. Currently there are active roof leaks in the kitchen area which is disruptive to operations for staff. The roof will be evaluated during the repair for possible use for on-site solar energy in alignment with the Village Climate Ready Oak Park Plan Goal: EE01 - Enhance Building Performance Standards for on-site solar energy.

Current Status:

Proposed funds are based on an estimate submitted by a roofing company.

& Resiliency; Community Health & Environmental

Description

The Multi Modal station is in need of repairs and improvements to improve the condition of the facility and make it a safe environment for its patrons. Security cameras would be installed in multiple locations in an effort to improve safety in the station and on the platforms. New doors leading to the station from the street and platforms were recently installed, but locks still need to be installed on the new doors. Security gates may also be installed to secure the station during off hours. Also, new lighting and flooring could be installed to improve the appearance of the main lobby area.

Justification:

Security improvements and new lighting would be beneficial to the Village and station users through improved safety, appearance and customer service.

Current Status:

This is a two phase project with the priority improvements proposed in 2023 and additional improvements completed in subsequent years provided under separate projects.

Project:	Transit Station Improvements	General Priority Code:	F	General Category:	Building Improvements
		Climate Priority Code:	High	Climate Impact Areas(s):	Energy Use in Buildings & H Resiliency; Community Heal

Description:

This project includes improvements to the Downtown Oak Park Multi Modal Station at Marion St. Work will include build out for potential tenants who will service the commuters, visitors and tourists, lobby improvements, warming station improvements, lighting improvements, mechanical system improvements, landscape improvements and improving the Clinton St. stairway exit. The project also includes facade improvements to the Multi Modal Station and the Oak Park CTA Station, primarily including Public Art.

Justification:

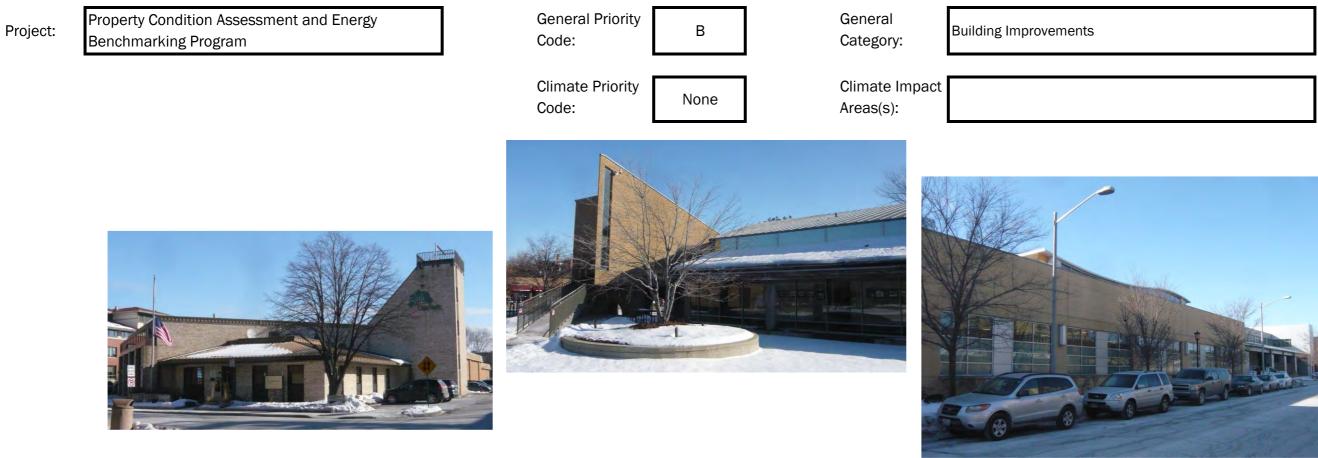

To improve appearance and customer service of commuters, visitors and tourists to Oak Park. It has been over 20 years since the station has seen any improvements. The station fare collectors office and previous coffee shop are now vacant and the Village is only using a small space for a Police Sub-station. The lighting and facilities are in poor condition and needs significant improvement. Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

In order to improve the conditions at the Multi Modal Station the following are estimates for future capital improvements: Tenant Space Buildout \$420,000, Lobby improvements \$350,000, Warming Station improvements, \$100,000, Lighting and Mechanical System improvements \$250,000, Platform Shelter improvements \$50,000, Clinton Ave stairway exit improvements \$50,000, landscape improvements \$25,000 plus Design/Engineering. Public Art/Facade Improvements at the Multi Modal Station and Oak Park Station is estimated at \$50,000 for design and \$250,000 for construction improvements. Estimates will be further detailed by design professionals. Design/Engineering is proposed to begin in 2025 with construction work proposed to begin in 2025 and continue in 2026.

Housing; Extreme Weather & ealth & Environmental Quality

Description:

The project includes providing professional architectural and engineering services for the Property Condition Assessment (PCA) of buildings owned and maintained by the Village.

Justification:

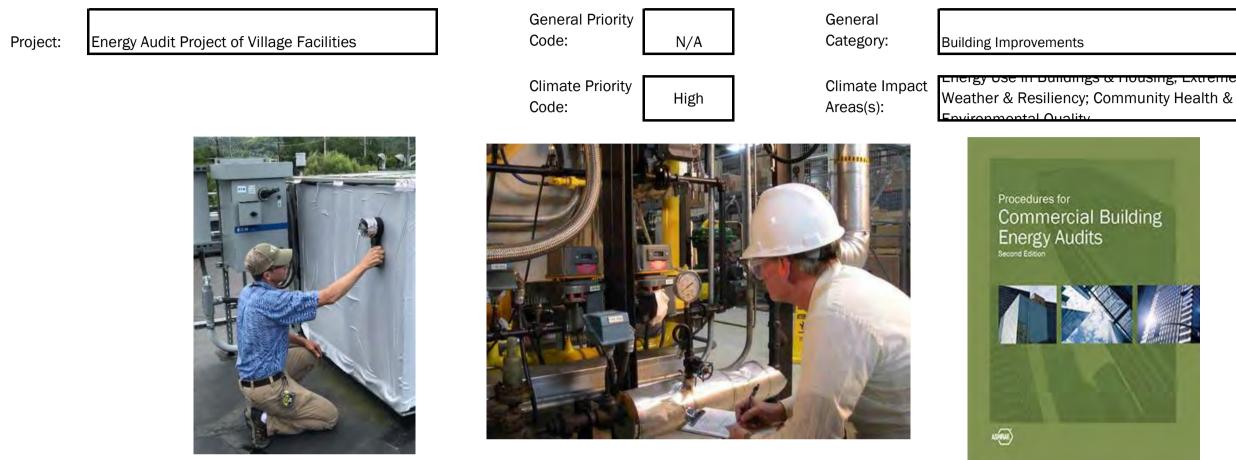

The purpose of the PCA is to assess the general condition of specific, accessible portions of the subject facilities and develop prioritized repair and maintenance recommendations and budgets to address the issues over the next ten years. The PCA along with the Facility Energy Audit will assist staff in identifying and prioritizing facility repairs and improvements in alignment with the Village's Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards. PCAs have been done once for Village buildings, however, those PCAs are already outdated and are in need of updating.

Current Status:

The previous PCA for Village Hall was completed in 2015. The south fire station PCA was completed in 2017, and the Public Works Center PCA was completed in 2018. In 2019, PCAs for the remaining buildings were completed. This included the main and north fire stations, the central water pumping station and the north and south water pumping stations. The intent of the project is to update the Property Condition Assessment for each facility on a five year schedule. Assessments of the three fire stations are intended to be updated for 2024. The three water pumping stations would be completed in 2026. Existing Energy Audits completed in 2023 will be evaluated and updated as part of this process in the future.

S		

Description:

The project includes providing professional engineering services for facility energy audits of buildings owned and maintained by the Village. This may include energy benchmarking and modeling, greenhouse gas calculations, and designs for weatherization, energy efficiency, fuel switching from natural gas units to electricity-powered units, and onsite renewable energy.

Justification:

A facility energy audit is a process and inspection survey to understand the energy use of the building and to identify opportunities to improve energy efficiency. The energy analysis will identify and provide the savings and cost analysis of all practical measures along with a discussion of any changes to operations and maintenance procedures. It will also provide a listing of potential capitalintensive improvements with a judgment of potential costs and savings. This project along with the current and updated Property Condition Assessments will assist staff in making decisions on repairs and improvements to Village facilities in alignment with multiple the Village Climate Ready Oak Park Plan Goals including: EE02 - Adopt Enhanced Building Performance Standards, EN01 - Perform Annual Energy Benchmarking, and ENO3 - Transition Buildings to electric Units.

Current Status:

This is a new and ongoing project. The intent is to complete the Energy Audit (EA) of all buildings owned and maintained by the Village in 2023. As of August 2023, the project has been completed. Future efforts would include updating the EA report based on work completed as part of the Property Condition Assessments.

Description:

This project involves the repair of various Police Station building systems that were identified in the Police Department Space Needs Analysis.

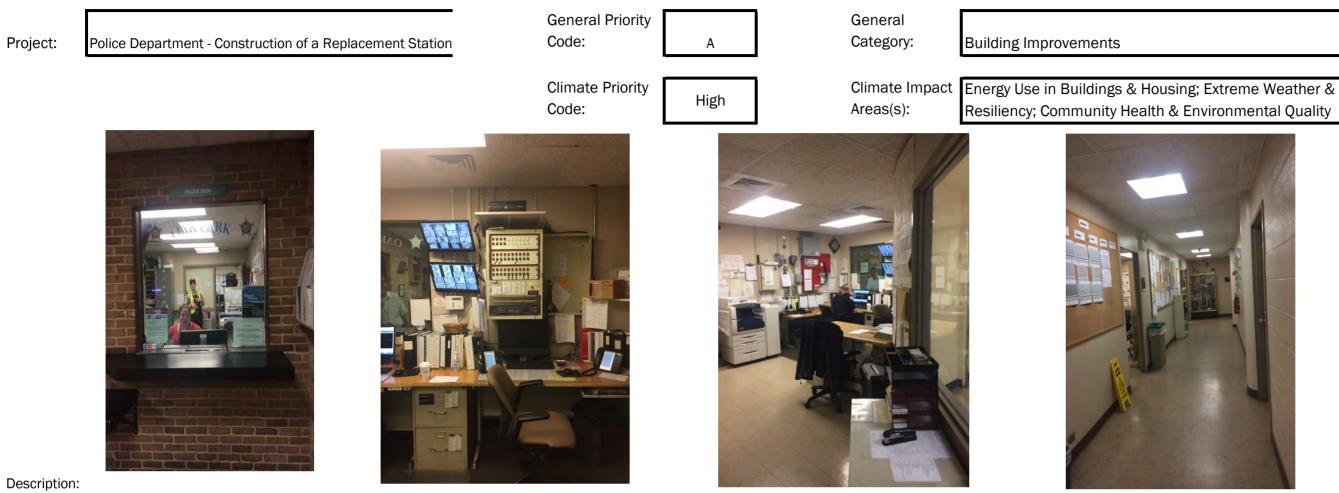

Justification:

The Village enlisted the architectural services of FGM Architects to complete the Police Department Space Needs Analysis. The work was completed in November 2019. As part of the analysis, the Police Departments building current condition was evaluated. Specific issues reviewed included accessibility, building code compliance, mechanical system operations, plumbing, electrical and structural systems. The items to be addressed were prioritized as "Urgent" (repaired within a 1-2 year period), "Required" (repaired within a 2-4 year period) and "Recommended" (items to be addressed in a 4-10 year period if found to be pertinent to the Village's plans for the existing facility). Project design and engineering will prioritize reductions in building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

The items identified as "Urgent" (2023) and "Required" (2024) are shown in project summary below. Costs have been adjusted from the 2019 report based on recent inflation conditions. Costs also include an approximate 15% design fee. "Recommended" repairs are shown in 2025. Project has been zeroed out based on Board direction on July 5, 2023 to move forward with construction of a new Police Station.

Construction	3012-43790-101-540673		-	135,000	135,000	-	-	-	-	-	-	
Total:		-	-	160,000	160,000	-	-	-	-	-	-	

Description:

This project involves the construction of a replacement Police Station. Work will include completion of a Needs Assessment and site selection phase, schematic design, design development, preparation of construction documents and construction. The project also involves upgrading the ventilation system in the firing range. Work also includes installation of an air purification system due to COVID-19.

Justification:

The Police Station is currently located in the lower level of Village Hall. This operation has been located in Village Hall since its construction in the mid 1970's. The facility is over crowded, inefficient and obsolete. Project design and engineering will prioritize reducing building emissions and energy usage in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

A space needs assessment was completed in 2019. The estimated expenditures below do not include land acquisition or environmental remediation costs, if necessary. The preferred option includes relocating the Police to a replacement facility on the same site as the current Police Station which would include renovating a portion of the existing space. On 2/18/20 the Village Board approved FGM Architects to proceed with Schematic Design services at a cost of \$350,000. Design Development (\$500,000), Construction Document preparation (\$1,000,000) is proposed for 2024. Work was delayed due to the COVID-19 pandemic. Bidding /Construction Mgmt. (\$125,000) is proposed in 2023 Work could start in 2023 after a fall 2022 bidding and be completed in 2024. In response to COVID-19, design of an air purification system in the Police Department and all three Fire Stations began in 2020. All equipment was installed and the project was completed in 2021.

Project: Public Works Center Air Supply for Lower Level Shops

Description:

This project involves the installation of additional air supply pipes and hoses in the lower level shop areas. This project would also include relocating the existing back-up air compressor in the Fleet shop to a new location and adding new air lines.

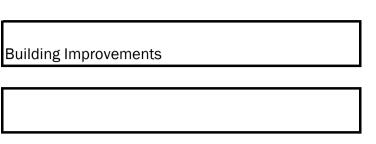

Justification:

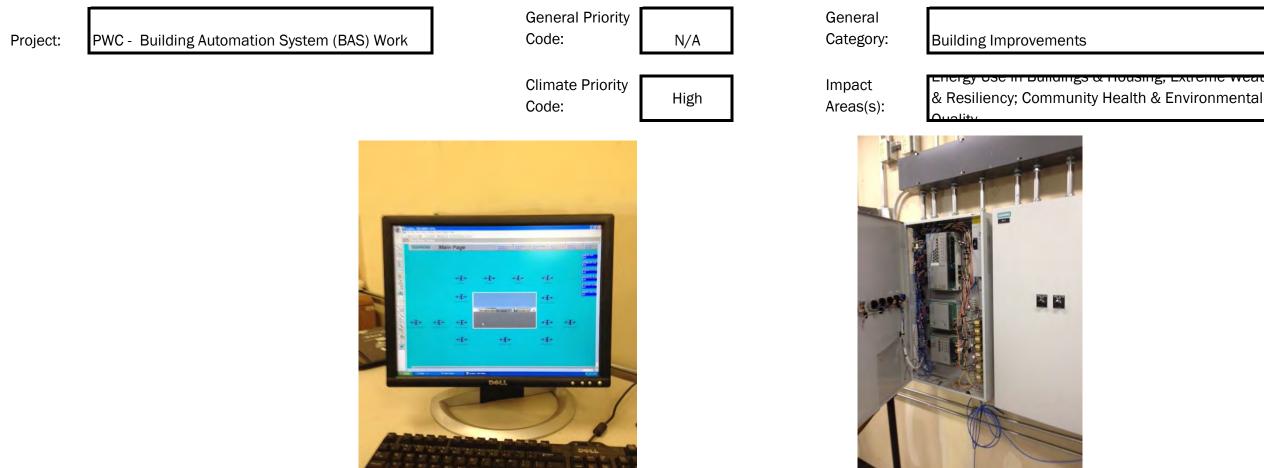

Original plans for the new Public Works Center included air supply lines in the lower level shops. This feature was eliminated from the scope of work due to budget restrictions. The existing air compressor inside the Fleet shop would not require replacement as there is sufficient capacity to add air supply lines to the lower level shops which would assist staff in creating a more efficient operation.

Current Status:

This is a new project. There are currently no air supply lines in the lower level shops.

Description:

This project involved upgrades to the existing Building Automation System (BAS) for the Heating Ventilation and Air Conditioning (HVAC) system at the Public Works Center. Work in 2023 included replacement of five control panels.

Justification:

The software system was original from initial construction (2007) and was no longer supported by the vendor. There are five control panels located throughout the building that are original to the building. These control panels contain circuit boards and relay switches that communicate with the BAS. They were in need of replacement as communication failures are occurring more frequently. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

This project has been completed. Updated control panels (5) located in various locations throughout the building were replaced in 2023.

Description:

This project involves installation of a DC Fast Charger at the Public Works Center

Justification:

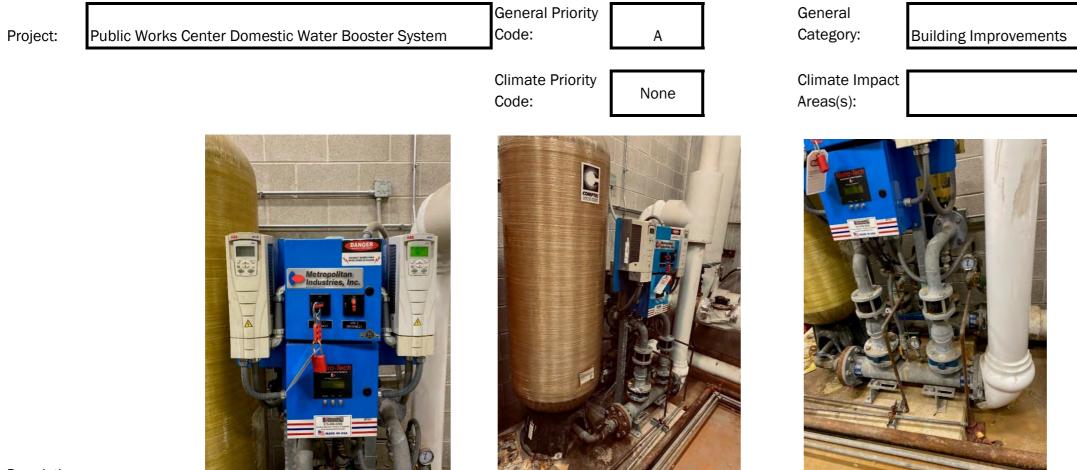

A DC Fast Charger will simplify transition from internal combustion engine vehicles to EVs. 24 hour a day emergency operations will not allow enough time to recharge an EV with a standard Level 2 charger. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE01 - Adopt Enhanced Building Performance and Electrification for EV Charging.

Current Status:

The DC Fast Charger is a new project. The Village is actively looking for grant funding to offset the budgetary impacts.

The current CNG dispenser is obsolete and no longer functional. The CNG infrastructure is from 1999. Repairs/upgrades to the station and upliftment of vehicles is cost prohibitive at this time. If CNG conversions becomes more cost effective in the future, repairs and reactivation will be revisited. The dispensers are non functional and there is no parts availability.

Description:

The Public Works Center (PWC) domestic water booster system is comprised of two pumps and two VFDs (variable frequeny drives) integrated into one main unit that pumps the domestic water supply from the lower level to various locations throughout the building. One of the VFDs became inoperable towards the end of 2022 and is in need of replacement. Both drives and pumps are original the building and both are nearing the end of their useful lifecycle.

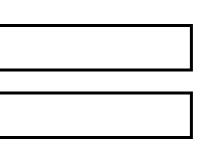

Justification:

With only one working drive and pump system, the PWC is vulnerable to losing adequate water pressure that is needed for daily operations, such as cleaning and maintenance, wash bay operations, Fleet shop operations, and kitchen and restroom appliances.

Current Status:

One VFD and pump is working but provides minimal water pressure. This would be a new project. Staff has already received one estimate in late 2022 from the original manufacturer for approximately \$63,000. Due to recent market-wide price increases in materials and supplies, \$80,000 is being proposed.

Description:

The Public Works Center (PWC) stationary emergency generator provides power to an emergency electrical panel that powers certain circuits for life safety related devices in the building. There is sufficient capacity on the panel to install additional circuits.

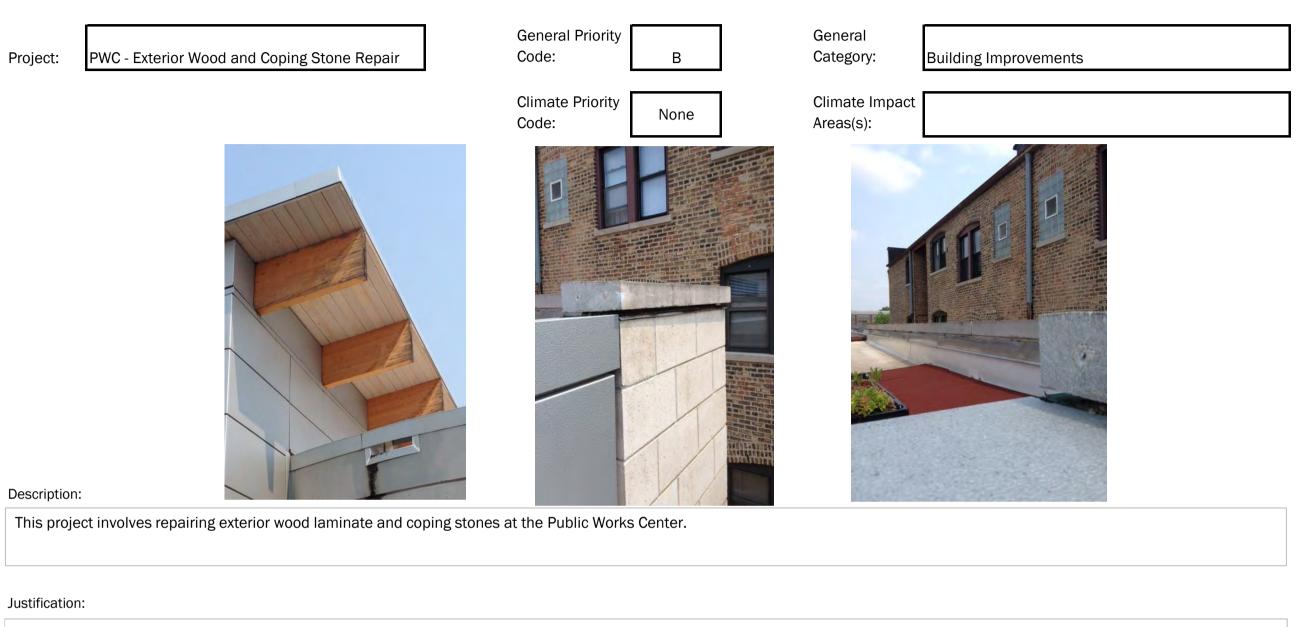

Justification:

To improve safety and provide emergency back-up power to various areas throughout the PWC in case of a power outage. Also, additional circuits are planned to provide sufficient capacity for future electric vehicles. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE01 - Adopt Enhanced Building Performance and Electrification for EV Charging.

Current Status:

The existing emergency generator is working but provides minimal back-up power.

Project:

Public Works Center Floor Sealing

Description:

This project involves installing a traffic coating membrane in select areas on the first floor of the Public Works Center (PWC) vehicle storage area.

Justification:

This project is necessary to prevent leaking into the lower level of the PWC from operations taking place on the first floor and to improve the longevity and structural integrity of the PWC.

Current Status:

This project is a continuation of the previous two phases of work which occurred in 2014 and 2015. This future planned work would cover the remaining areas on the first level of the PWC that were not included in the first two phases (east end of first level), as well as re-sealing some areas that were already sealed years ago. This work could potentially be done in conjunction with the PWC Structural Assessment work planned for 2024 and subsequent years.

		Act	tuals	Project Budget	Amended Budget	Year End Estimate		Reco	mmended Bud	get

	Total:	-	-	-	-	-	-	50,000	100,000	-	-

Description:

This project involves installing new drainage tiles for the existing green roof system and installation of a new built green roof section for demonstration purposes.

Justification:

The current green roof system at the Public Works Center (PWC) is healthy but it is not growing at the expected rate. New drainage tiles installed under the existing green roof trays would help improve water and air flow and promote a more healthy and abundant green roof. If money allows, a small section of "built" green roof could be installed to show residents and other tour groups another option for green roof installation. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: NNO3 - Enhance Campus Green Infrastructure.

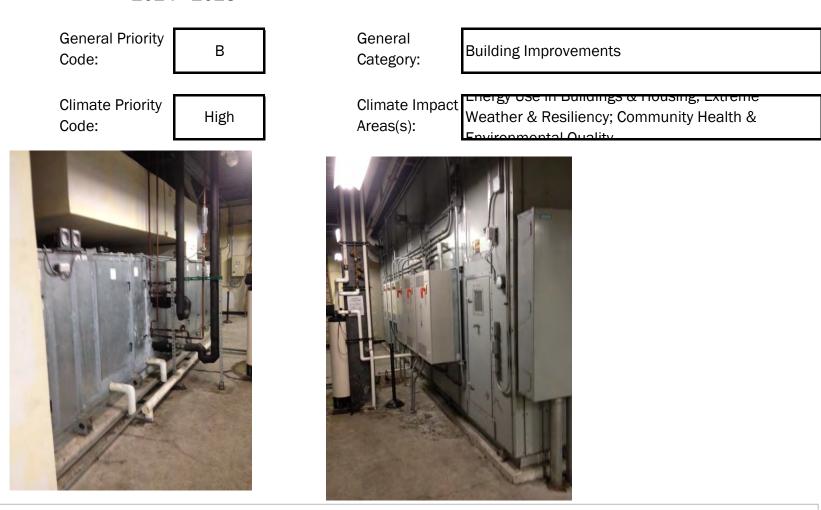

Current Status:

The existing green roof has been under a maintenance contract since 2016. The condition is improving, but the current contractor feels some of the issues associated with the condition and quality of the existing roof are related to the roof trays sitting on the building roof without a drainage underlayment. Systems installed today would not be installed without this underlayment.

Parks, Plants & Biodiversity; Extreme Weather &

Public Works Center HVAC Air and Fan Motor Project: Balancing

Description:

This project involves conducting a vibration analysis, balancing and air flow test of all Heating Ventilation and Air Conditioning (HVAC) fan motors in all of the air handling units at the Public Works Center (PWC). Mechanical engineering and commissioning services would also be included in this process.

Justification:

There are sixteen large fan motors throughout the building that need to be maintained and serviced periodically. The existing fan units are working properly but have not all been balanced since the PWC opened in 2007. A vibration analysis and balancing of the fan motors is needed in order to prevent mechanical failure. Additionally, an air-balancing test is needed for all air handing systems to ensure proper air flow and sufficient air volumes and exchange rates. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

Funds proposed for the 2023 budget would be for fan motor balancing and any repairs required due to the balancing analysis. This would be a recurring program approximately every four years. Funds proposed for 2024 would be for mechanical engineering and commissioning services as well as services to adjust BAS programming related to air flow balancing. Modifications to HVAC systems would be made as needed based on the air balancing analysis and the commissioning process.

General Priority General Public Works Center LED Lighting Upgrades F Building Improvements Code: Category: iergy use in buildings & nousing, Extre **Climate Priority** Climate Impact High Weather & Resiliency; Community Health & Code: Areas(s):

This project involves replacing existing light fixtures in various areas on the 2nd floor, as well as in the Fleet offices spaces, the lower level shop office areas and the fuel station with new energy efficient LED lighting.

Justification:

The existing light fixtures are original to the building and could easily be replaced with new LED light fixtures that are more energy-efficient, brighter and longer-lasting. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EEO2 - Adopt Enhanced Building Performance Standards.

Current Status:

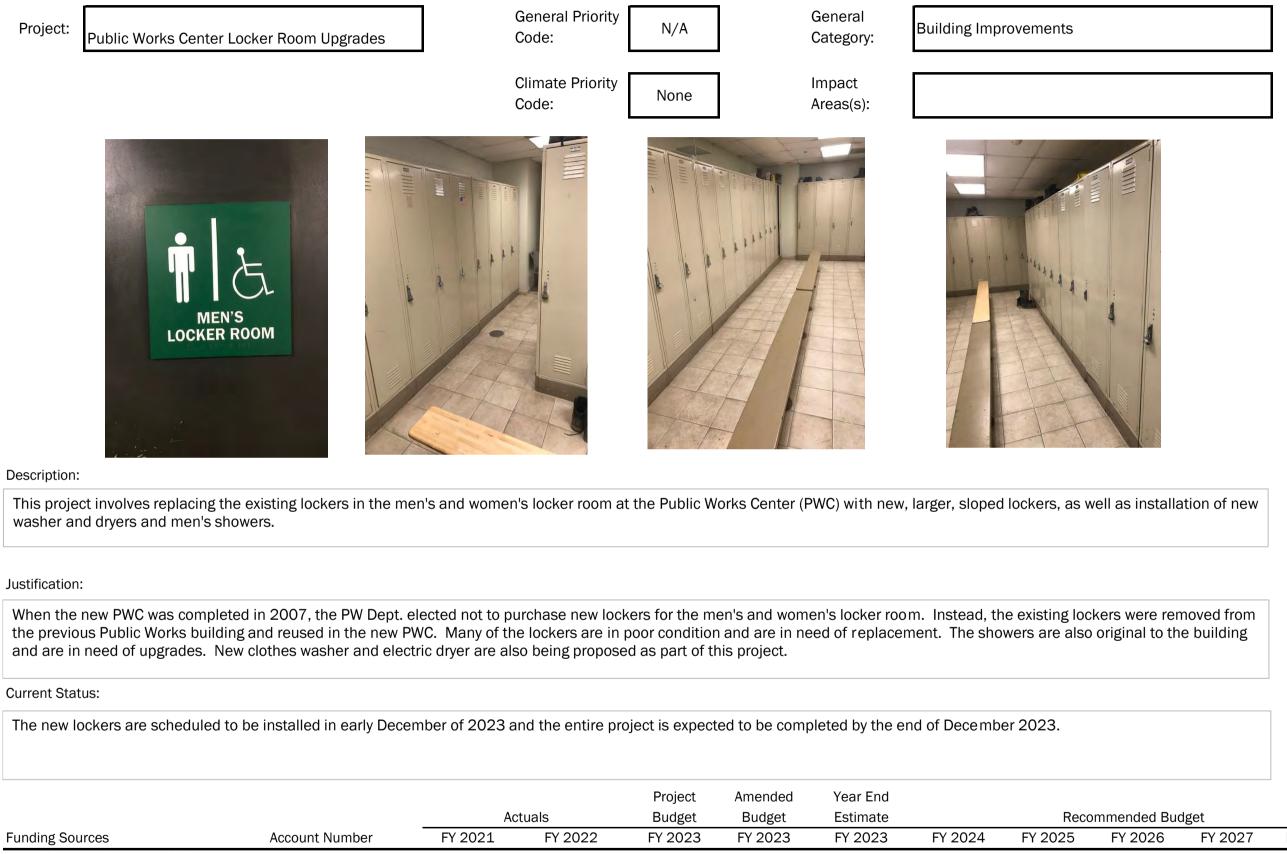

This is a new project. Potential grant funding (through ComEd incentive programs), or Sustainability Program funds could be used to offset some of the cost. A proposal was submitted in early 2022 which identified all costs (Village cost and incentives) broken out by building area: lower level vehicle/equipment storage area - approximately \$25,000; offices and main building entrance area - approximately \$15,000; first floor level vehicle/equipment storage area, fuel station and Fleet offices - approximately \$15,000. \$5,000 is also being proposed for contingency for a total recommended budget of \$60,000.00.

Description:

This project involves repairs and upgrades to mechanical, electrical, plumbing and structural (MEPS) systems at the Public Works Center (PWC) over a five-year period. A more detailed description of suggested repairs is identified in the Property Condition Assessment (PCA) that was completed for the PWC in 2023. Also included would be repairs to the fire protection systems.

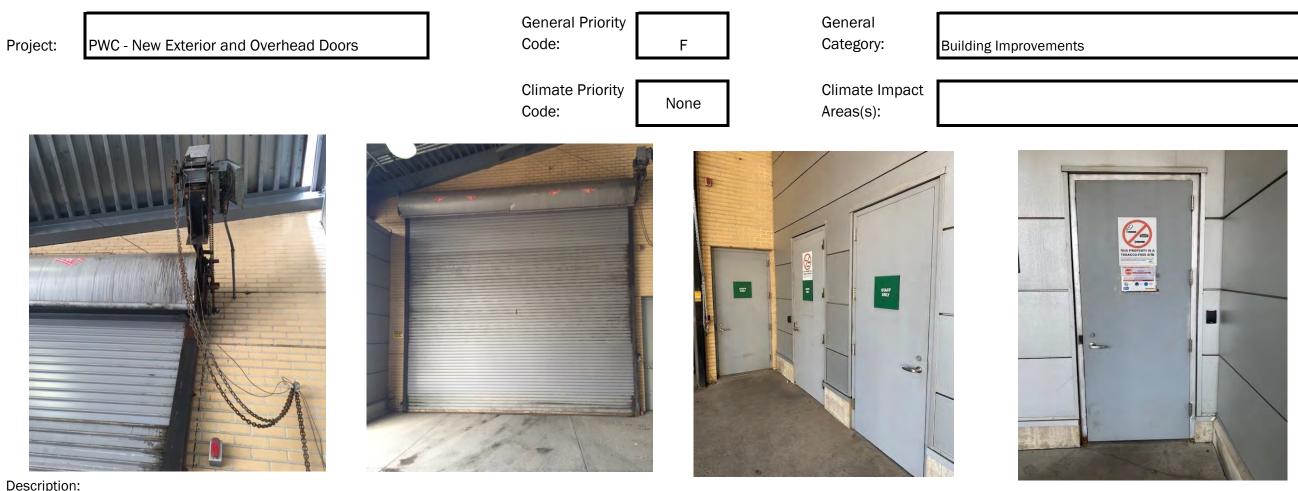

Justification:

The Property Condition Assessment (PCA) of the PWC completed in 2023 identified various components of the MEPS systems that are in need of repair as well as other projects that could be scheduled for later years.

Current Status:

This is a new project. Specific scope items were identified in the 2023 PCA. Work planned in 2024 identified in the PCA is estimated at \$346,885 and includes exterior wall repairs estimated at \$9,350 (tuckpointing and mortar replacement) and HVAC repairs estimated at \$337,535 (replacement of damaged ductwork and unit heaters, AHU2 replacement and replacement of approximately 20 carbon monoxide sensors estimated at \$3,500 each that are directly tied to the building automation system). Work planned in 2025 would include concrete floor repairs (\$480,000) as well as some 2024 items that are not planned for 2024, such as substructure repairs (\$3,465), electrical repairs (\$27,500), life safety repairs (\$57,926), and traffic coating replacement (\$55,000). Work planned in 2026, 2027 and 2028 is outlined specifically in the 2023 PCA and the proposed amounts shown are taken directly from the PCA.

Description:

This project would involve replacing existing existing metal exterior doors as well as existing overhead (OH) doors at the Public Works Center as needed.

Justification:

There are three exterior OH doors at the PWC that are the main points of ingress/egress to the building for vehicles and equipment. The existing OH doors in the Fleet Shop, of which there are four, are original to the building. Installation of new high-speed exterior OH doors was completed in 2014 and 2015, and installation of a new high-speed door on the north end of the Fleet Shop in 2019. This effort was very beneficial to the PW Dept. and the users they service (Fire Dept., Police Dept., PW Dept. and PDOP) through increased productivity and response time. In 2023, seven existing metal exterior doors would be replaced due to deterioration, and in subsequent years, additional metal exterior and OH doors would be replaced on an asneeded basis.

Current Status:

This is an ongoing project.

Village of Oak Park **Capital Improvement Program** 2024 - 2028 **General Priority** General Code: PWC - New Office Furniture F Category: Project: Building Improvements Climate **Climate Priority** Impact None Code: Areas(s):

Description:

This project involves purchasing and installing new office furniture at the Public Works Center.

Justification:

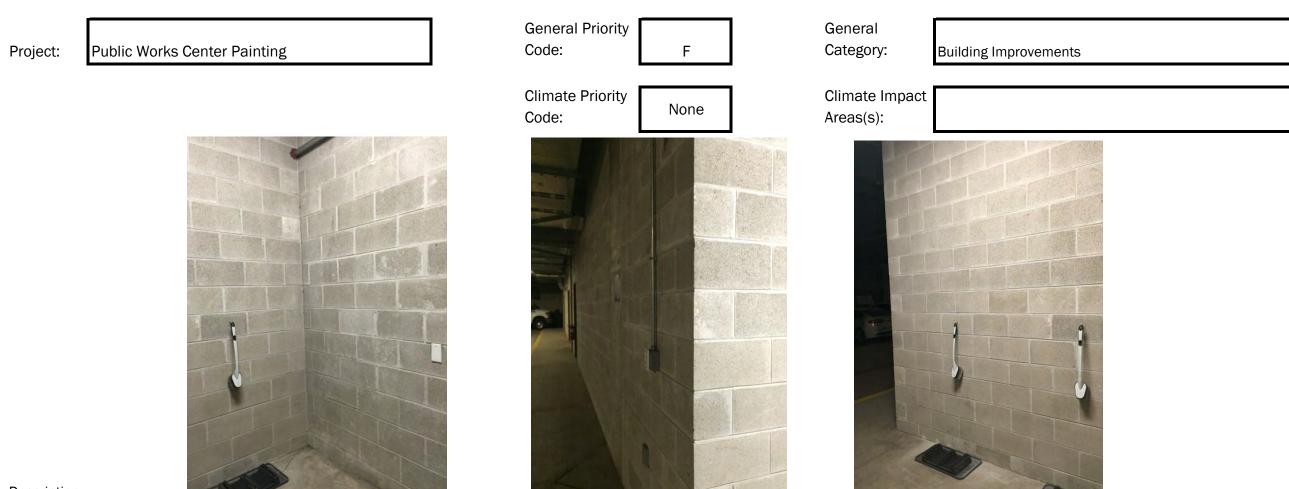

The existing office furniture at the PWC is original to the building from 2007, and some of the furniture was salvage and reused from the previous Public Works Center before 2004. The existing furniture is nearing the end of its useful service life. New furniture would improve appearance and functionality and bolster morale for PW Administrative staff.

Current Status:

This is a new and ongoing project. An interior design architect would be utilized as part of this project. A portion of the 2023 funds would be reallocated to cover a portion of the cost of the Public Works Center Exterior Door Replacement Project taking place in 2023.

Description:

This project involves painting various areas throughout the PWC that were never painted during the original construction as well as re-painting areas that are in need of new paint. This would be recurring work every three to five years.

Justification:

Various areas throughout the PWC were never painted when the building was completed due to budgetary restrictions. Some areas that have been painted require new paint.

Current Status:

This is an ongoing proje	ect.

Description:

This project consists of installing a new salt brine maker and accessory equipment at the Public Works Center to supplement current snow and ice control operations.

Justification:

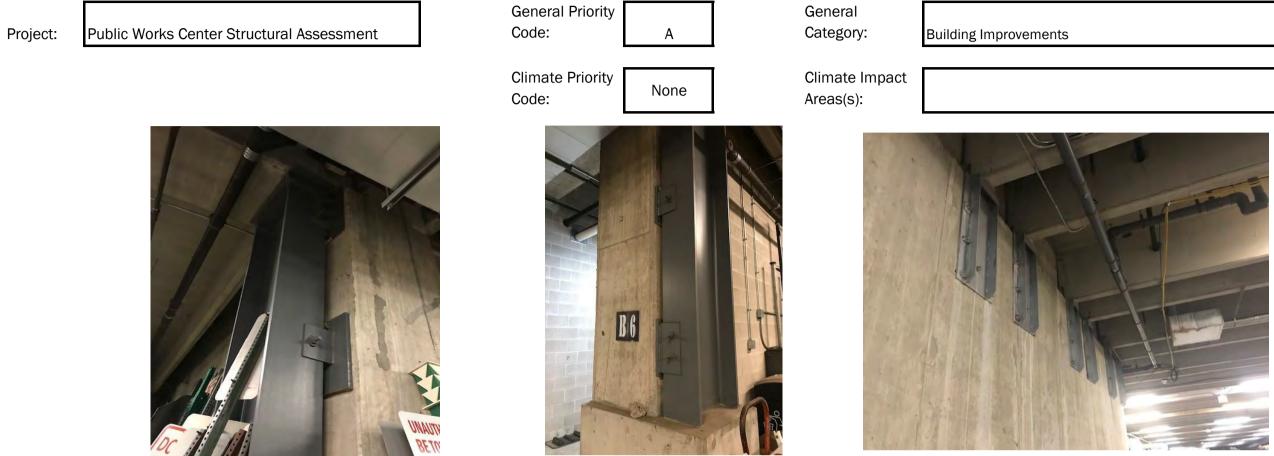

This equipment is used to produce a salt brine solution that is allied to the roadways in advance of a winter weather event or during an event in addition to rock salt. The use of salt brine at the onset and during a snow event help prevent snow and ice from bonding to the pavement and decreases the amount of rock salt needed. The upfront cost of installation and operation is recovered overtime in the reduced amount of rock salt and chemicals purchases and delivered needed. The use of salt brine in place of or in addition to the standard use of rock salt can have a meaningful impact on the environment and is fiscally responsible as the cost on in-house production is significantly cheaper than purchase and delivery from a vendor. This project aligns with the Village Climate Ready Oak Park Plan Goal: DW05 - Minimize Salt Use.

Current Status:

Snow mitigation is currently handled with plowing, rock salt and calcium chloride. Rock salt and Calcium Chloride are both purchased and delivered by an outsic

ide vendor.		

Description:

This project involves conducting an assessment of the structural integrity of the Public Works Center by a qualified structural engineering firm.

Justification:

The Public Works Center was built in 2007. In 2024 the building will be 17 years old and would be due for an assessment of current conditions of concrete and steel structural elements. This should be a regular occurring project. Funds for repairs needed based on assessment would be budgeted in subsequent years.

Current Status:

While this is a new project there was an assessment completed previously and repairs made accordingly. This work would coincide with the PWC floor sealing effort proposed for 2024 and 2025.

This project involves the installation of a larger truck lift and relocating the current truck lift. This will create another bay capable of lifting cars and mid sized trucks and provide staff with a truck ramp lift better suited to lifting our modern trucks (garbage truck, ambulance, grapple truck, etc.).

Justification:

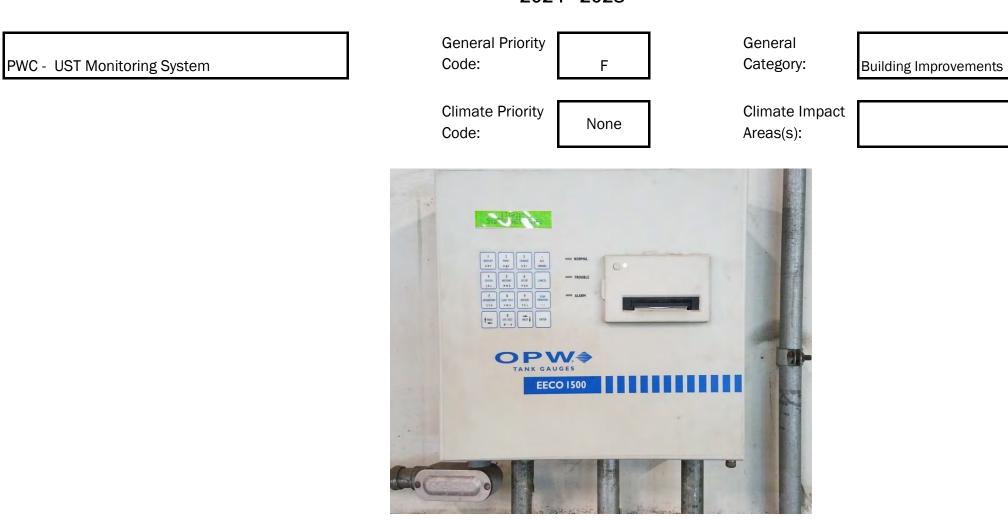

The original truck ramp lift was sufficient for the trucks and ambulances. Newer ambulances are one ton heavier and three feet longer than previous models, overtaxing the current lift's capacity. Proposed lift capacity is 30,000 lbs.: 15,000 lbs. front/15,000 lbs. rear.

Current Status:

The current truck ramp lift capacity is 18,000 lbs.: 9,000 lbs. front/9,000 lbs. rear. New ambulances typically weigh 18,000 lbs.: 7,000 lbs. front/13,660 lbs. rear. Work was delayed due to the COVID-19 pandemic. The new lift has been received and is planned to be installed and operational by the end of June 2022.

Project:

Description:

This project involved upgrading the existing obsolete underground storage tank (UST) leak monitoring system at the Public Works Center. Additional work is planned to upgrade the current system and replace current dispensers.

Justification:

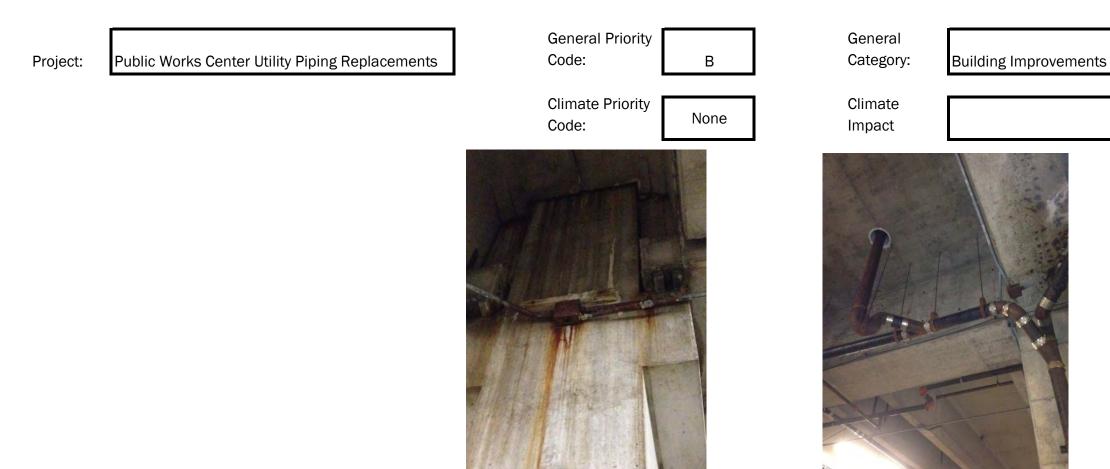

The previous system was original from initial construction (2007). The system did not meet the standards of the current Fire Marshall inspectors. The new system is working properly but can be upgraded by installing new dispensers.

Current Status:

This is an	ongoing	project.

Description:

This project involves replacing electrical conduit and plumbing pipes at the Public Works Center that have been damaged by exposure to salt.

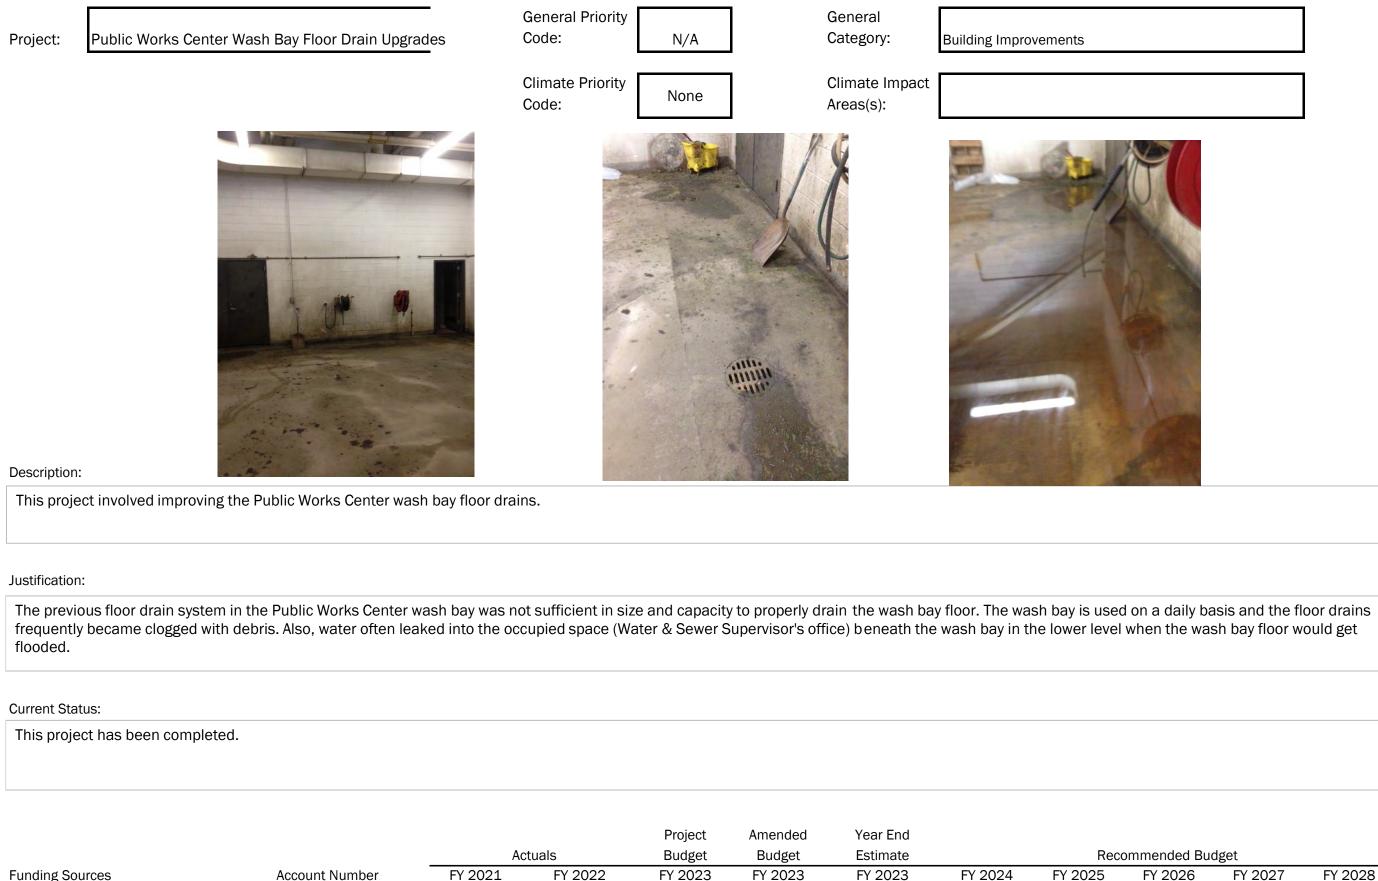

Justification:

Salt corrosion has damaged various electrical conduit and plumbing pipes in the lower level of the PWC. The Property Condition Assessment (PCA) that was completed at the Public Works Center in 2018 identified specific items in need of immediate repair at the east end of the lower level. Only some of those items have been addressed. Additional items still need to be placed.

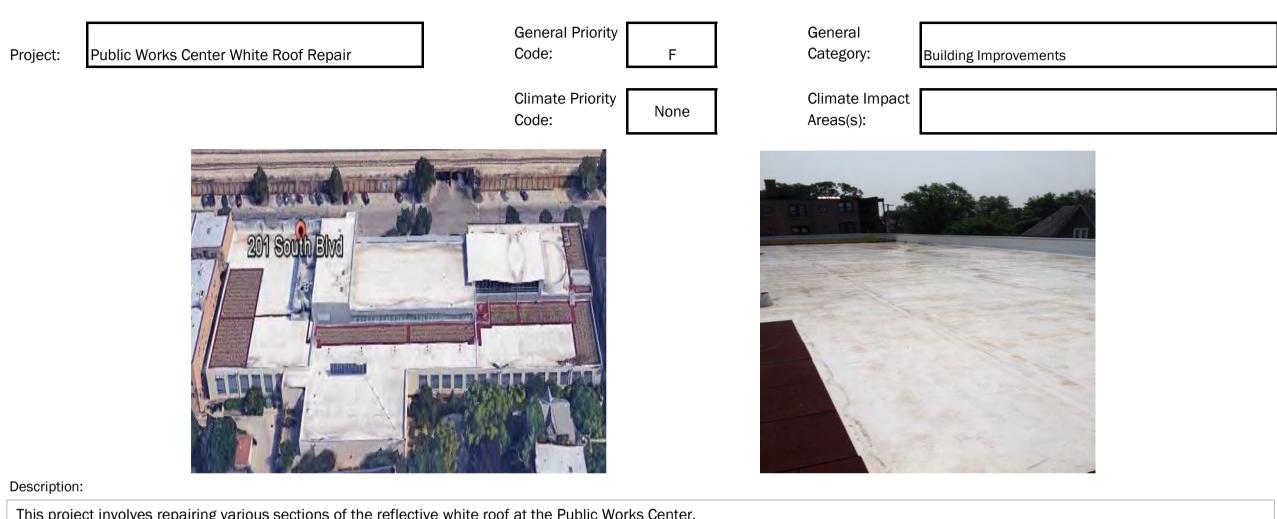

Current Status:

This is a new and ongoing project intended to be completed every two years until all original cast iron piping is replaced with new schedule 80 PVC piping. The \$25,000 that was budgeted in 2023 was reallocated towards the Public Works Center Wash Bay Drainage Improvements Project.

This project involves repairing various sections of the reflective white roof at the Public Works Center.

Justification:

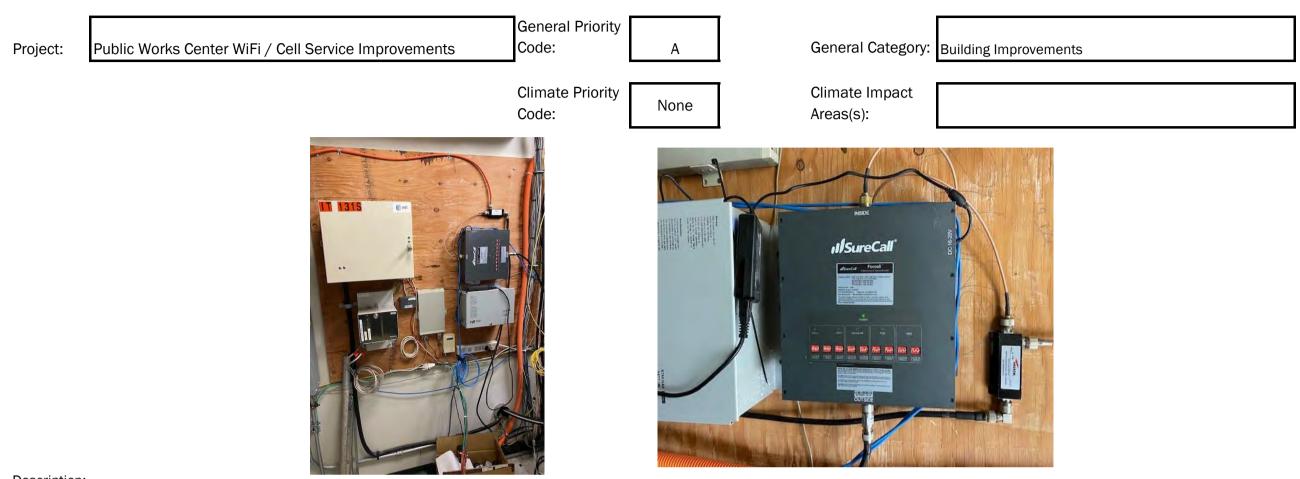

The white reflective roof will be seventeen years old in 2024 and will be in need of some substantial repairs. The Property Condition Assessments (PCAs) of the Public Works Center completed in 2018 and 2023 identified specific items in need of repair.

Current Status:

This is new project. An analysis (infrared roof scan) was completed in the spring of 2018 and a small area damaged by moisture was identified. This area was repaired in the summer of 2018, and the rest of the white roof area was professionally cleaned. Work planned for 2025 would include replacement of roof drain hardware, primer and top coat application, installation of galvanized steel counterflashing and power washing.

Description:

This project involves conducting a propagation study for wifi / cell phone service improvements and implementation in the Public Works Center.

Justification:

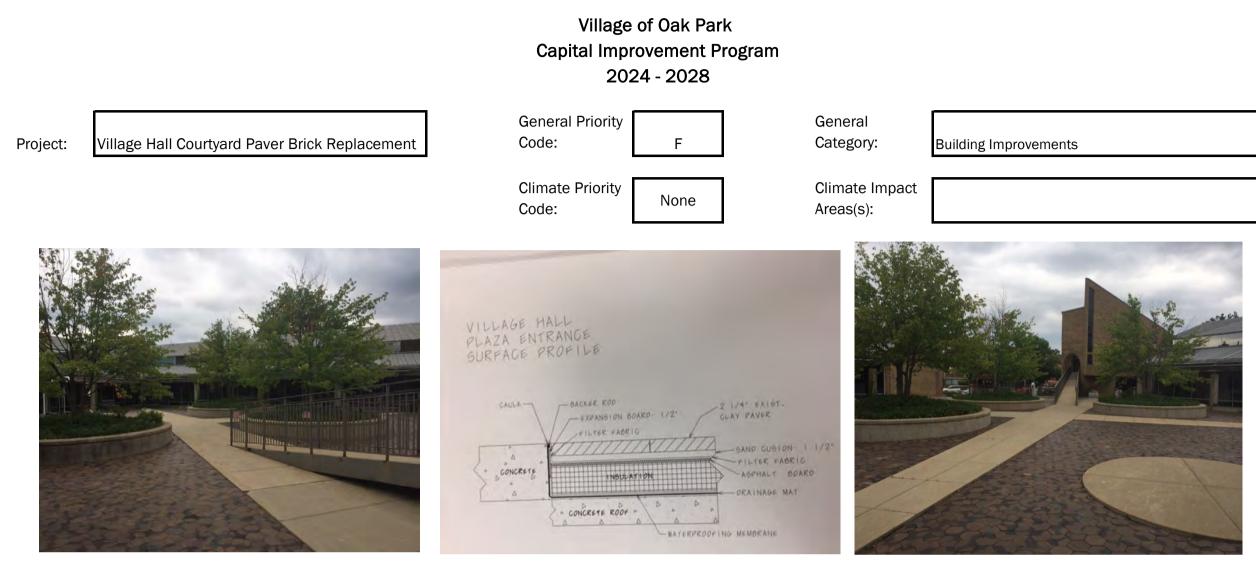

WiFi and cell phone service/reception has historically been poor and sporadic in the PWC, especially in the lower level of the building. Implementing improvements to WiFi and cell phone service would greatly improve communications among staff.

Current Status:

This is new project. Assistance/involvement from the IT Dept. would be a necessary and important component of this project.

Description:

This project involves leveling the Village Hall courtyard paver blocks on the upper level along the concrete walkways and round-ways. The project could also include adding irrigation to the three tree planters and replacing the trees.

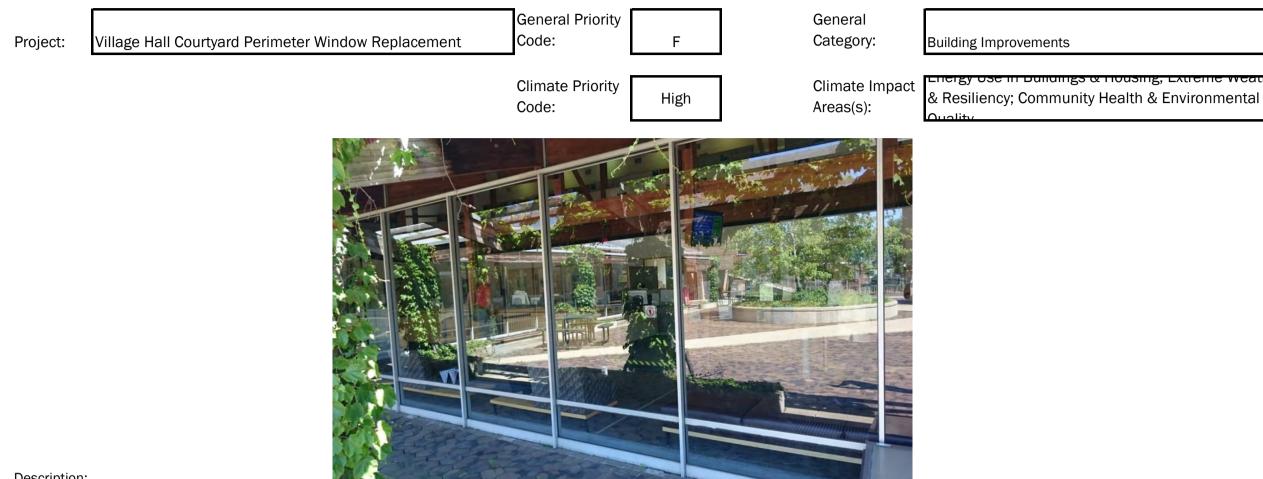

Justification:

The pavers have begun to settle and sink in at various locations along the concrete walkways and round-ways. Also, the three existing trees are showing signs of decline. The planters are a difficult environment for trees to survive since there is no permanent irrigation system.

Current Status:

This project involves leveling the existing pavers along the concrete walkways and round-ways in the courtyard. A new irrigation system for the courtyard trees could also be part of this project but would require further investigation.

Description:

This project involves the replacement of the Village Hall courtyard perimeter windows on all three sides.

Justification:

The existing windows are original to the building and are single-pane glass and do not provide a high level of insulation. The zero-rated glass allows sunlight to enter the building which substantially heats up the interior and increases the load on the cooling system. Conversely, it does a poor job of insulating the interior during the winter months thereby increasing the loads on the boilers. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

This is a new project. This work could be done in conjunction with the VH HVAC upgrades planned for 2024. Design of new HVAC equipment and mechanical systems at VH would take into account new courtyard windows thereby reducing size and cost of new HVAC systems.: This project has been defered to 2025 pending Board direction on the Village Hall Facility.

Description:

This project involves the replacement of the Village Hall courtyard wooden structural beams along the courtyard lower windows.

Justification:

The existing wooden beams along the edge of the Village Hall courtyard windows are deteriorated and in need of replacement. A bid was received in 2021 to replace all of the wood. This project budget was based on that bid.

Current Status:

Building Maintenance Contractor staff were able to re-secure many of the wooden beams in the Spring of 2022. By doing so, it is possible to defer this project to 2028.

Description:

Village Hall electrical circuits and panels are in need of an upgrade to mitigate power outages and prevent electrical fires.

Justification:

The existing electrical system at Village Hall is original to the building. There are various locations that have burnt wiring, power outages due to insufficient capacities in the panels and faulty breakers. Some of the wiring for the ceiling mounted light fixtures in room 101 were already replaced in 2022 due to their poor condition, and circuits in the lower level Police records area were also replaced due to frequent overloaded circuits. Other various areas on the main level experience the same conditions often. Funds in 2024 would be used to hire an electrical engineer to assess the entire building's electrical system and provide a cost estimate for upgrades in 2025. Design of a new electrical system would account for additional circuitry for future electrical vehicle charging stations. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE01 - Adopt Enhanced Building Performance and

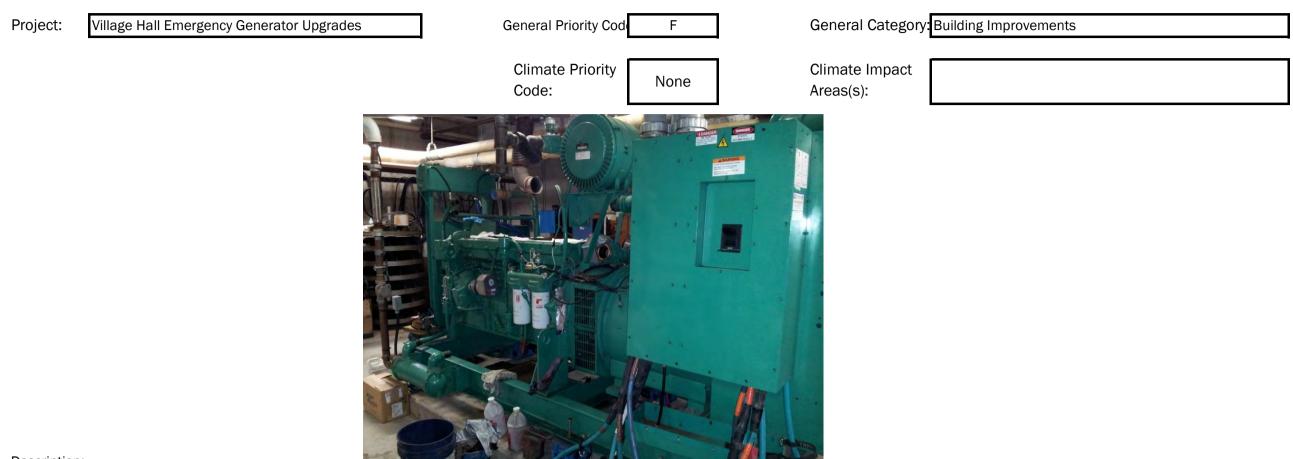

Current Status:

This is a new project. Work in 2022 was deferred and a portion of the funds were reallocated for other projects (Public Works Center oil & water separator repairs and asbestos removal at the south fire station). The 2023 funds were used for the Police Dept. prisoner area heating improvements which required installation of new additional electrical circuits and associated electrical materials and components.

Description:

The Village Hall emergency generator would be modified to accept power cables from an external mobile power generator (such as the Public Works CAT mobile generator) thereby increasing the electrical load capacity and improving the reliability of back-up power.

Justification:

The existing generator at Village Hall does not currently have the capacity or capability to accept additional power cables from an external source without temporarily modifying the electrical cabinet on the generator.

Current Status:

This is a new project and could be bid out together with the Public Works Center Emergency Power Panel Upgrades Project also planned for 2025. Proposed amount is based on cost for plugs and power cables previously installed at the PWC.

Project: Village Hall Furniture and Workstation Replacements

Before

General Priority General Code: Category: С **Building Improvements Climate Priority** Impact None Code: Areas(s):

After

Description:

This project involves replacement of old furniture and workstations at Village Hall and painting of all interior drywall. Work also includes new carpeting throughout and any miscellaneous electrical or carpentry work.

Justification:

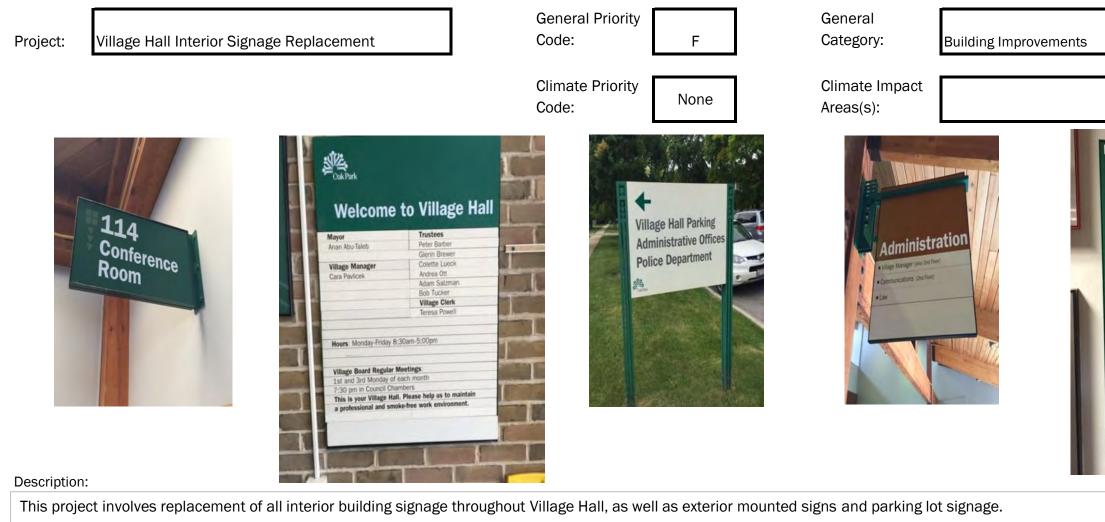

Existing furniture and workstations have outlived their service life at Village Hall. New furniture and workstations will provide an updated, clean appearance improving the customer service experience and could bolster employee morale.

Current Status:

Phase I was completed in December of 2015. Phase II was completed in 2016 and consisted of new furniture in the Village Manager's office, Parking area and Adjudication. Also in 2016, projects included the HR Department completion, HR Conference Room, the Lobby, Conference Room 102, Finance & Development Customer Services completion and additional Public Seating. Work also included carpeting and painting those areas not completed in phase I. In 2017 and 2018, Phase III included limited new furniture, carpeting and painting on the second level, employee lounge and Central Services. Other associated work related to the furniture installation included electrical (new electric along the windows), carpentry and moving expenses. 2019 work included replacement of broken furniture and installing blinds at various locations. 2020 costs included replacements as needed (approx. \$4,131), as well as \$19,038 for glass panel installation related to COVID-19. Work in 2021 was delayed due to COVID-19. In future years, funds are proposed to replace furniture and equipment as needed.

Justification:

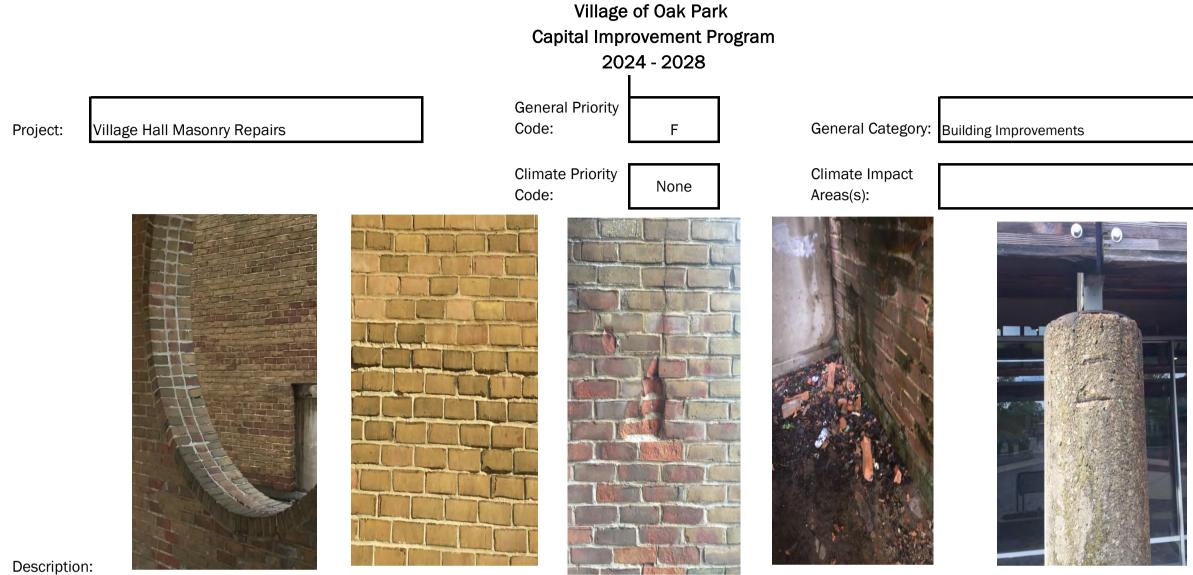

New signage throughout Village Hall is needed as part of the new furniture and remodeling project that is ongoing at Village Hall. Current signage is outdated and signage would improve way-finding for all Village Hall users. This project aligns with the Village commitment to accessibility.

Current Status:

This is a new project. Public Works staff would work with VMO Communications staff on the bidding process and installation process. This would be part of the V contract.

This project involves repairs to the exterior masonry of Village Hall.

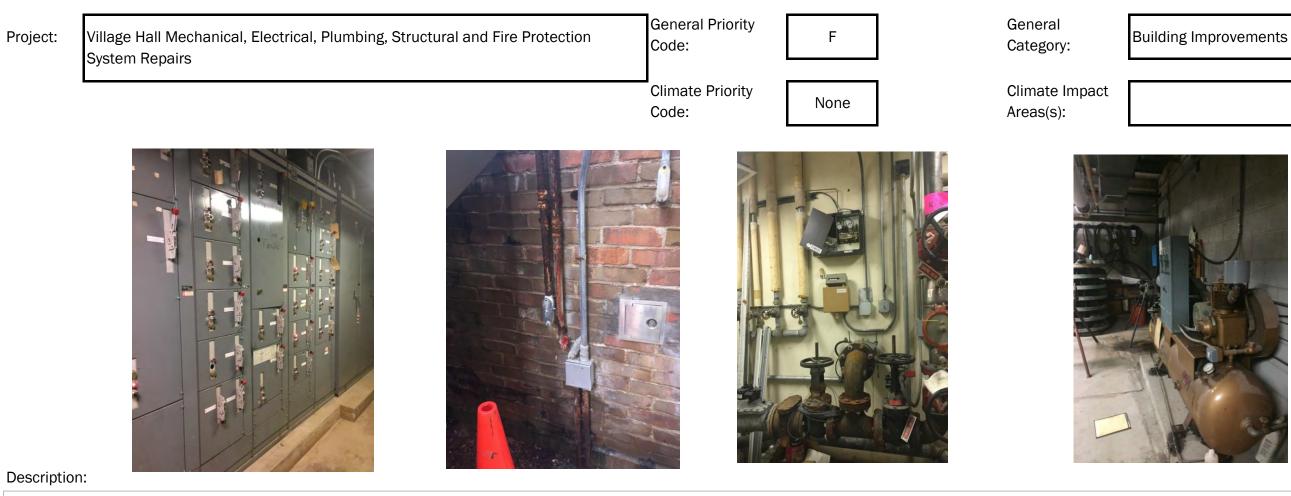

Justification:

The Property Condition Assessment (PCA) of VH completed in 2015 identified various areas of the exterior masonry that are in need of repair. The last time any masonry repair work was done on the Council Chambers and other exterior areas of VH was 2008. Conditions have deteriorated since then and repairs need to be done to prevent moisture infiltration and damage.

Current Status:

This project has been defered to 2025 pending Board direction on the Village Hall Facility.

This project involves repairs and upgrades to mechanical, electrical, plumbing and structural (MEPS) systems at Village Hall over a five-year period. A more detailed description of suggested repairs is identified in the Property Condition Assessment (PCA) that was completed for Village Hall in 2023. Also included would be repairs to the fire protection systems.

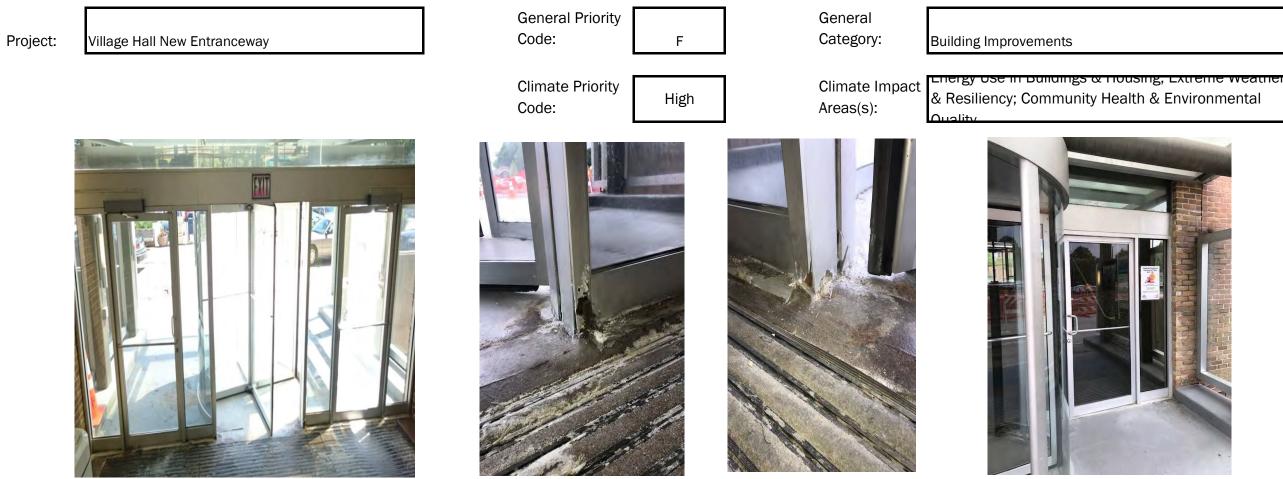

Justification:

The Property Condition Assessment (PCA) of Village Hall completed in 2023 identified various components of the MEPS systems that are in need of repair as well as other projects that could be scheduled

Current Status:

This is a new project based on the items identified in the 2023 PCA. The scope of work for 2025 would include items identified in the PCA for 2024 and 2025 which include repairs, upgrades and replacement of exterior masonry, interior walls and wood, plumbing fixtures, electrical panels and associated electrical components, life safety equipment and exterior landscaping. Work in 2025 would also involve repairs and upgrades to the fire protection systems, including installation of visual notification appliances (strobes) in conference and meeting rooms, removal of non-sprinkler related wires and other attachments to sprinkler piping in the basement north records room, addition of identification signs for the sprinkler systems, and installation of automatic sprinklers throughout the building to improve the overall life safety for occupants in the building. Work planned in 2026, 2027 and 2028 is outlined specifically in the 2023 PCA and the proposed amounts shown are taken directly from the PCA.

Description:

This project involves replacing the main entranceway glass doors and revolving door and all associated hardware and electronics.

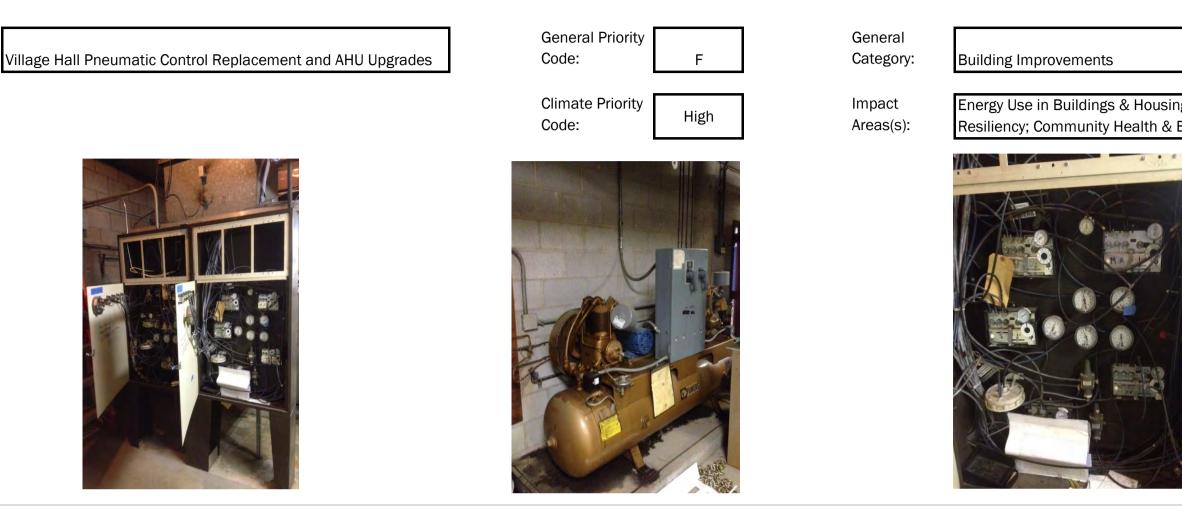

Justification:

To improve the appearance of the entranceway and improve the reliability of the doors, ADA related components and door operators. Proposed concepts for consideration will include options that reduce energy use and emissions in line with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

The existing framework at the main entrance is in very poor condition. Work in 2023 involved retaining a design firm to provide and present design options for the entrance to staff and the Village Board. Design concepts will include an in-kind replacement as well as new and improved concepts with construction cost estimates. Based on the determination, engineering and construction of the entranceway would occur in 2025. This project has been deferred to 2025 pending Board direction on the Village Hall Facility.

Project:

Description:

This project involves the replacement of the pneumatic control system for the entire building including thermostats, damper controls and digital Building Automation System (BAS) upgrades. This project also involves the replacement of various air handling unit components to update the system with modern and sustainable equipment and technology. The scope of work would include new supply and exhaust fan motors, VAV (variable air volume) boxes, new dampers and damper controls and digital integration into the existing BAS.

Justification:

The main air compressor for the pneumatic system has reached the end of its useful service life. With the recent installation of the new chillers, boilers and BAS at Village Hall, it is now possible to upgrade the pneumatic controls to digital controls which would be more accurate and efficient and allow for greater temperature controllability by occupants utilizing digital thermostats in all zones. All of the air handling units at Village Hall are original to the building. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: EE02 - Adopt Enhanced Building Performance Standards.

Current Status:

A mechanical engineering firm would be retained in 2025 to provide the design of the upgraded system as well as a detailed construction cost estimate and this work would be bid out and completed in 2025 / 2026. The existing air handling units are original to the building and new fan motors, valves, coils, dampers, etc. could be upgraded to provide higher system efficiency and increased equipment longevity. Some new digital controls have already been installed in supply fans 1 and 2 in 2016. This project has been deferred to 2025 pending Board direction on the Village Hall Facility.

Village of Oak Park Capital Improvement Program 2024 - 2028 **General Priority** General Village Hall Roof Repairs Code: В Category: Project: **Building Improvements Climate Priority** Climate Impact None Code: Areas(s):

Description:

This project involves continued repairs to the Village Hall roof.

Justification:

The existing roof system is original to the building and there are various locations that leak when it rains. A bid was received in 2021 for repairs. Additional bids were received in early 2022.

Current Status:

Some repairs were completed in 2017 and 2021, and additional repairs were made in 2022 which included replacement of deteriorated wood members, installation of copper patches, removal and replacement of sealants and counterflashing, and repairs to split solder seams. This is an ongoing project as-needed.

Project:

Description:

This project involved installing new ventilation equipment in the Village Hall employee lounge men's and women's restrooms.

Justification:

The men's and women's restrooms in the Village Hall employee lounge did not have a working exhaust/ventilation system, however, that issue has been resolved.

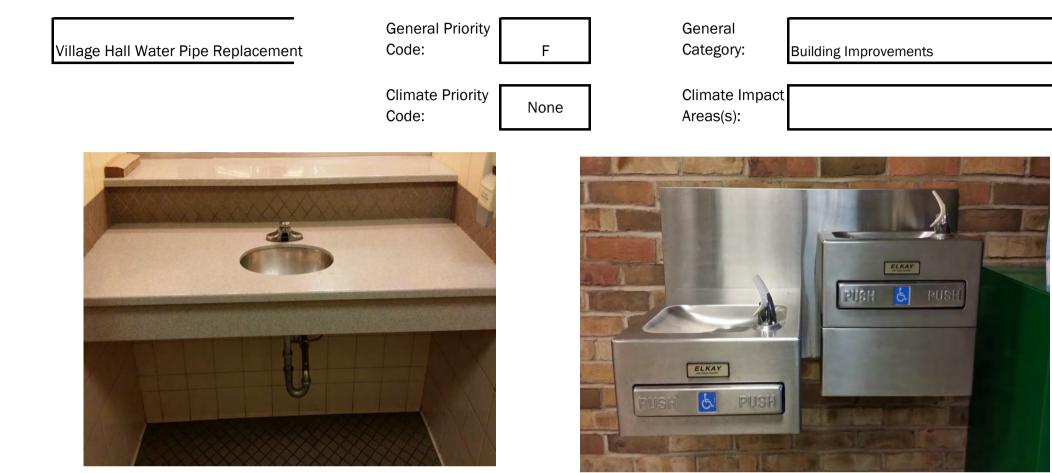

Current Status:

FY 2022 funds originally allocated for this project were reallocated to cover a portion of the cost of the South Fire Station Renovations Project being done in 2022. The existing ventilation system for this area has been repaired and is now working properly.

Building Improvements

Village of Oak Park **Capital Improvement Program** 2024 - 2028

Project:

Description:

This project involves the replacement of the domestic water supply lines at various locations throughout the interior of Village Hall.

Justification:

The domestic water supply lines are original to the building and are in need of replacement. There are numerous locations throughout the building where pipes h repaired. Broken water pipes cause damage to ceilings and ceiling tiles as well as light fixtures and other electrical components.

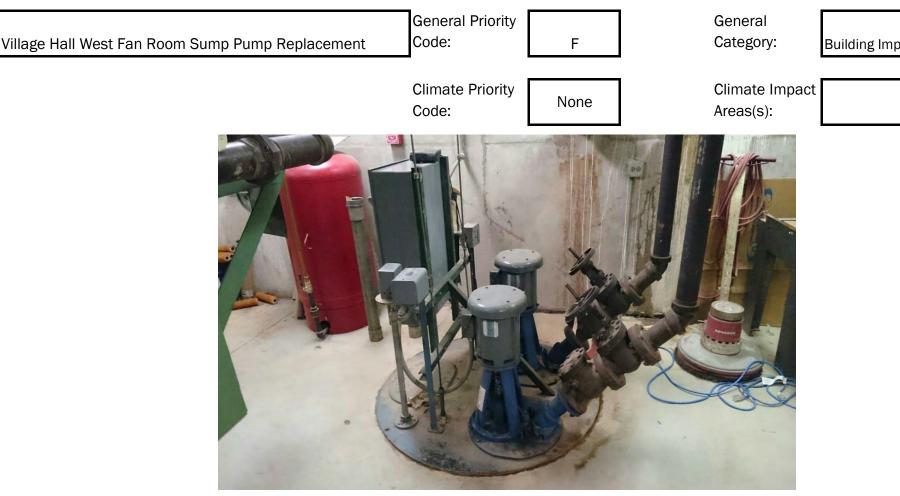

Current Status:

This is a new project. All water supply lines are currently functioning properly.

lave broken and have been

Village of Oak Park Capital Improvement Program 2024 - 2028

Project:

Description:

This project involves the replacement of the Village Hall sump pump in the west mechanical room in the lower level of Village Hall.

Justification:

The existing pumps are reaching the end of their useful service lives. Currently there is no alarm system integrated with the pumps to alert staff of high water levels. Recently, the sump pump switch was stuck and would not turn on the pumps resulting in a flooded cooling tower pump pit. The cooling tower pumps are brand new and it is imperative that protection and alarming is built in with the new sump pumps and sump pit to prevent the cooling tower pump pit from ever flooding.

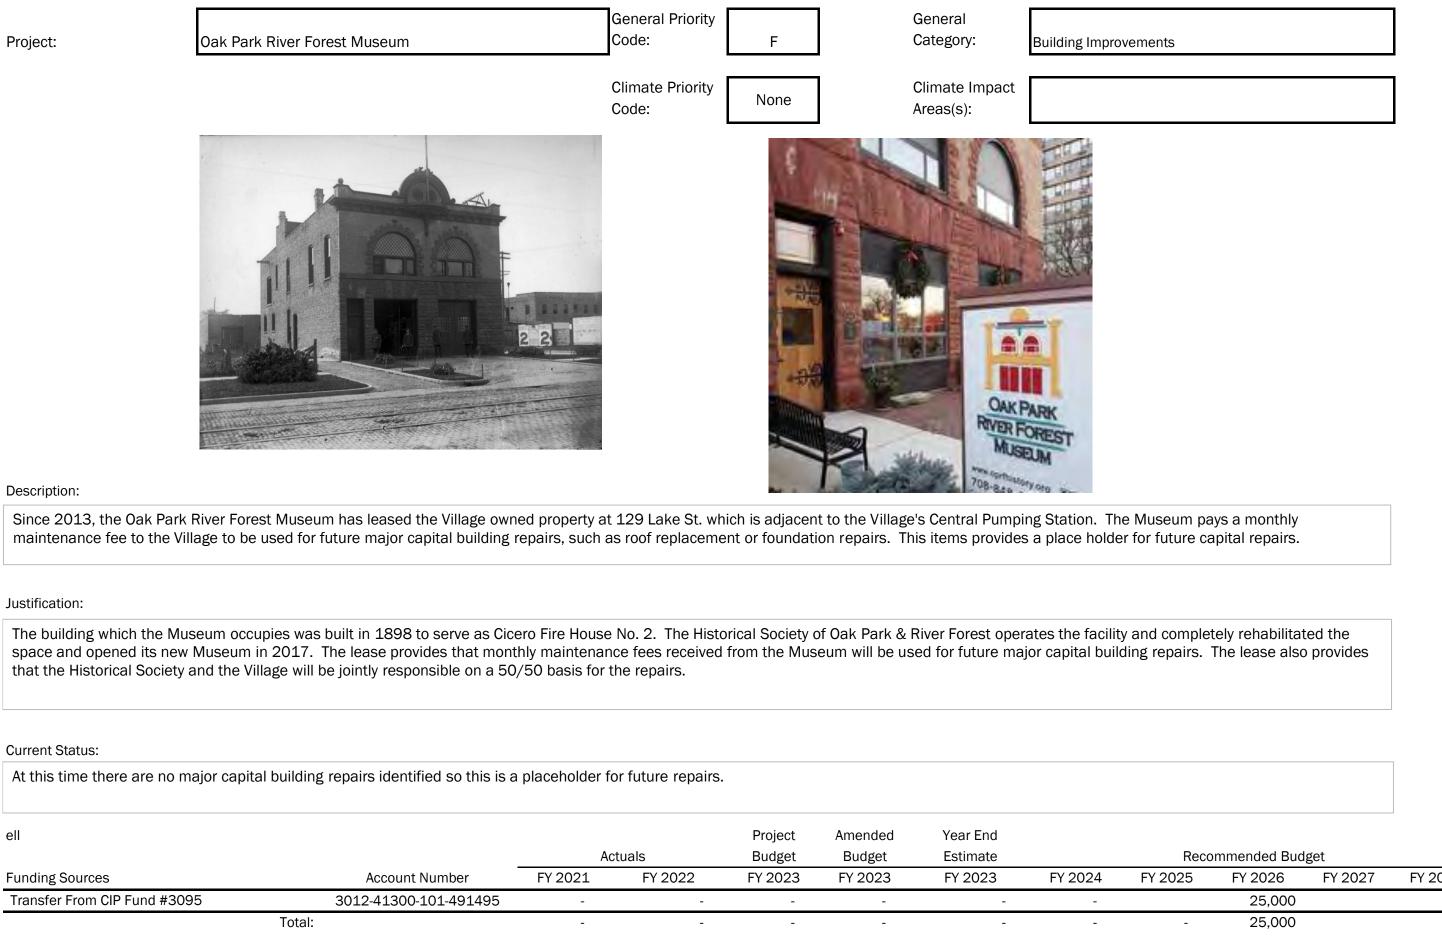

Current Status:

The sump pumps are currently functioning properly. Float switches were replaced in 2016 and have extended the life of the motors for a few additional years.

FLEET REPLACEMENT FUND #3032

Fund Summary

The Fleet Replacement Fund tracks expenses related to vehicle purchases for Village departments outside of one of the Village's Enterprise funds (Water/Sewer, Parking and Environmental Services). In recent years, purchases have shifted toward leases instead of outright purchases in order to maximize purchasing power while leveraging historically low interest rates.

The Fleet Division within the Department of Public Works reviews vehicle needs with relevant departments and determines when equipment needs to be replaced based on an analysis of cost effectiveness of maintenance.

Although the current focus is on the actual infrastructure improvements it is not possible to have a valid conversation about the fund's ability to pay for the costs of projects without also discussing the other expenses of the fund.

Below is a revenue and expense table that illustrates the overall fund finances. However, the operation portion, everything beyond the capital costs, is currently under review and will come before the Finance Committee and Village Board as a part of the operation budget recommendation.

The Fleet Services Division continues to search for fiscally responsible ways of expanding the Green Fleet with equipment that provide the required features for each Village department, while also using less fuel and help clean the environment. The Village "Green Fleet" consists of 2 Compressed Natural Gas pickup trucks, 18 Hybrid vehicles, 6 electric cars and all 68 of the diesel vehicles run on B20 biodiesel fuel. This equals 45% of the fleet using alternate fuels.

The Village owns and maintains 211 vehicles and equipment which are dedicated to each department as follows:

- Village Hall vehicles includes Development Customer Services, Health Department and Pool cars: 14 total: 12 sedans, 1 SUV and 1 van
- Police: 75 total: 41 marked squads and 22 unmarked squads. The remaining vehicles consist of CSO vehicles, segways and generators
- Parking Enforcement: 5 total
- Fire: 18 total: 3 Pumpers, 1 ladder truck, 4 ambulances, 1 command vehicle, 1 pickup truck, 7 admin/inspector vehicles and 1 ATV
- Public Works: 68 total: 12 admin/pool vehicles, 3 vans, 9 pickup trucks, 4 aerial trucks, 14 large trucks, 3 front end loaders, 5 small trucks, 1 garbage truck, 1 street sweeper, 1 tow truck and 15 various equipment and trailers
- Parking Fund vehicles: 5 total: 3 vans, 1 pickup truck and 1 small SUV
- Water & Sewer Fund vehicles: 25 total: 5 large trucks, 3 small trucks, 2 backhoe/loaders, 3 pickup trucks, 2 generators, 2 sedans, 4 vans and 4 various equipment and trailers
- Environmental Services Fund: 1 pickup truck

Priority Scale

A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. **Medium=** Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact. **None=** Not included as a recommendation in Climate Ready Oak Park.

Year End

Amended

Village of Oak Park Fleet Replacement Fund 2024 - 2028

General Priority Code:	F	General Category:
Climate Priority Code:	High	Climate Impa Areas(s):

Project:

Description:

Vehicles used by inspectors and pool usage for the day to day operations of the Village Admin. staff.

Administration Vehicle Replacement

Justification:

New Hybrids have an 8 year warranty on the batteries, making trade in or sale before that time most beneficial for best return on the secondary market. Replacement units will all be <u>Hybrids or Electrics</u> if available. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacement Schedule: 2024 -2025 - Five Admin. cars (\$38,000 each) 2026 - Four Admin. cars (\$38,000 each) 2027 - One Health Command Van (\$150,000) 2028 - Two Admin. car (\$40,000 each)

Village of Oak Park **Fleet Replacement Fund** 2024 - 2028 General Gen Priority Code: Cate Fire Vehicle Replacement F Category: Climate Impact High Priority Code: Areas(s):

Description:

Project:

Replacement of Fire Department vehicles.

Justification:

The vehicles proposed for replacement have reached the end of their expected useful life. Newer year vehicles will offer modern technology and better fuel efficiency. In addition, it will supply the Fire Department with the most dependable, efficient and up-to-date emergency response equipment to better serve the residents of Oak Park. The Fire Department is increasing the ambulance fleet to 3 in service when staffing allows and 1 in reserve to handle the increase in calls in recent years. The majority of Fire calls are EMS related. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacemen	nt Schedule:

Village of Oak Park Fleet Replacement Fund 2024 - 2028

Vehicles are operated mostly 24/7. The constant stop and go is very wearing on the vehicles. Regular replacement will keep repair costs down and PEOs on the street. Replacement is recommended at 8 years and before 100,000 miles. License Plate Readers (LPR's) have been added to several units increasing usage. Replacement units will all be Hybrids or Electrics if available. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions. Current Status:

Replacement Schedule:

2024 -

Description:

Justification:

Project:

2025 - 2016 Ford Fusion HYB (\$38,000), 2016 Ford Escape (\$38,000)

2026 - 2018 Ford Transit Connect Van (\$38,000)

2027 - 2020 Ford Escape HYB (\$40,000)

2028 - 2021 Ford Escape HYB (\$40,000)

Village of Oak Park **Fleet Replacement Fund** 2024 - 2028

Project:	Police Vehicle Replacement]	General Priority Code:	A]	General Category
			Climate Priority Code:	High]	Climate Impact Areas(s):

Replacement of Police Department vehicles.

Justification:

Police cars may run 24/7. Age, mileage and wear and tear take their toll on these vehicles. Newer vehicles almost exclusively require just maintenance which is more controllable, whereas older vehicles require maintenance as well as repairs, which are not as controllable, or inexpensive. Newer vehicles will be more fuel efficient and have warrantees, as well as more modern safety features for our officers. The recommended replacement schedule is four years for the frontline Patrol and 10 years on the unmarked units. We are exploring lifecycles of Hybrid Patrol vehicles at 5 years increasing our ROI with fuel savings. Some Patrol units are repurposed as Resident Beat Officer or Community Resource Officer vehicles which are not as demanding, allowing the replacement time to be eight to 10 years in those positions. The replacements are more reliant upon time and condition as opposed to mileage as these vehicles only traverse a 4.5 square mile area, but run almost constantly. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacement Schedule:

2024 - Seven Marked (\$50,000 each) & Five Unmarked (\$48,000 each) Squad car replacements.

2025 - Six Marked (\$52,000 each) & Two Unmarked (\$50,000 each) Squad car replacements, One CSO vehicle (\$38,000). One Transport Van (\$85,00 2026 - Six Marked (\$52,000 each) & Five Unmarked (\$50,000 each) Squad car replacements.

2027 - Five Marked (\$54,000 each) & Two Unmarked (\$52,000 each) Squad car replacements, One Cargo Van (\$80,000)

2028 - Seven Marked (\$54,000 each) & Two Unmarked (\$52,000 each) Squad car replacements

Village of Oak Park **Fleet Replacement Fund**

2024 - 2028

Project:	Public Works Vehicle	Replacement	General Priority C	Λ	General C
			Climate Priority C	Lidh	Climate In Areas(s):

Description:

Replacement or rebuilding of Public Works Department vehicles. This category does not include Public Works vehicles assigned to the Water & Sewer Division or Environmental Services Division.

Justification:

Equipment and vehicles that are past their cost effective lives and have exceeded the evaluation criteria for retention are a financial burden on the Village of Oak Park. The Department is proposing to rebuild vehicles, where cost effective, and wear has not been detrimental to the chassis or engine. As more services are being brought in house equipment will be used more than in the past. Newer equipment will help keep downtime to a minimum. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacement Schedule:

2024 - 2008 P/U w/plow (\$65,000), Three Updated spreader boxes for tandem axle trucks (\$55,000 each), 2002 Asphalt truck (\$300,000), 2005 Small loader (\$90,000). 2025- 2016&2017 Five Admin vehicles (\$38,000 each), 2005 Single axle dump truck w/chipper box w/plow, (\$200,000), 2005 Front end loader (\$350,000), 2005 Tandem axle dump truck w/plow (\$250,000), 1982 Air compressor trailer (\$30,000), Snow melter trailer (\$100,000 from PW \$100,000 from Parking Services) **2026** - 2002 Semi Road Tractor (\$300,000), 2016 P/U w/Plow (\$70,000), 2005 Small loader (\$95,000), 2005 Front End Loader (\$350,000) 2027 - 2016&2017 Two Admin vehicles (\$40,000 each), 2003 Service truck (\$80,000), 2000 Large Aerial truck (\$350,000), 2005 Tree stumper (\$70,000), 2016 One ton truck w/plow (\$170,000), 2016 Multi purpose tractor (\$100,000), 2015&2012 P/U w/plow (\$70,000 each), 1999 Portable air compressor (\$35,000) 2028 - 2000 Passenger van (\$60,000), Two 2016 P/U w/plow (\$70,000 each), Two Tanden Axle Dump trucks w/salter/plow (\$300,000 each), 2017 One ton truck w/plow (\$175,000)

EQUIPMENT REPLACEMENT FUND #3029

Fund Summary

The Equipment Replacement Fund tracks expenses related to major equipment purchases for Village departments. In recent years, purchases have focused on computer equipment as well as mobile computer applications for the Village Police Department.

Priority Scale A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

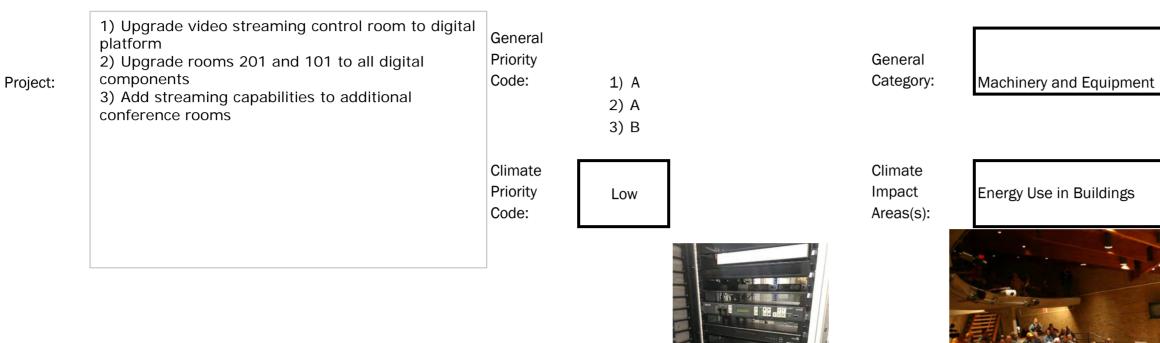

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project complete, no 2024 or future expendiyures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes. Medium= Designated as a medium priority due to potential carbon mitigation outcomes. Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact. None= Not included as a recommendation in Climate Ready Oak Park.

Description:

The need to move all equipment to digital from analog is essential to the future of municipal government transparency through live streaming and archiving of public policy making. The heart of the control room equipment dates from more than two decades ago when the operation was established just for cablecasting. As equipment has failed, the cost of replacement has grown because all available equipment has become digital and must be back engineered to be compatible with the analog operational control equipment. Ability to continue this piecemeal approach to upgrading and maintaining critical audio/video infrastructure is declining and the capabilities could be linterrupted for an extended time to allow for emergency upgrades.

Justification:

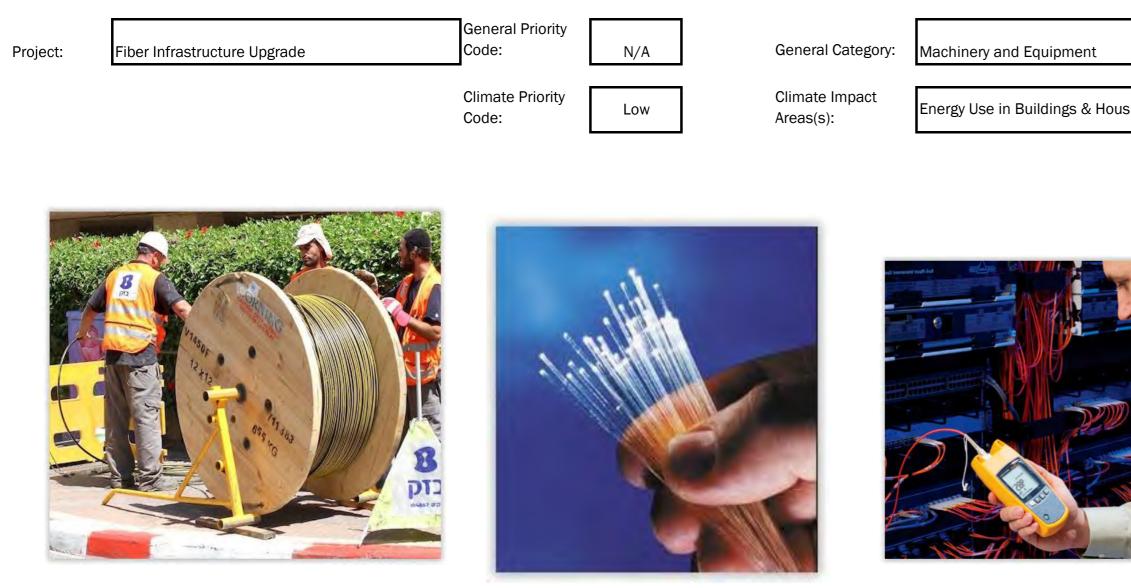

The ability to stream and archive public meetings could be lost or interrupted for an extended time. The need to expand capabilities for streaming public policy deliberations for informed citizen engagement appears to be among the highest priorities of the Village Board and community activists.

Current Status:

All equipment is operational at this time. However, the risk of equipment failure is real. 2022 Funds were used to hire a consultant to identify scope and costs.

Description:

The Fiber infrastructure upgrade of village's Wide Area Network (WAN) is used in day-to-day operations to interconnect technology services to various village facilities, such as Pump Stations, Fire Stations, Village Hall, Public Works Center, Parking Garages and Police substation.

Justification:

This project was identified as a core system and infrastructure in the IT Strategic Plan in part due to the increased use of technological services and devices, e.g. video, data, voice, mobile devices and remote activities. A Fiber WAN upgrade will significantly increase transmission speeds, build network resiliency and allow for anticipated future capacity of services with a consultant's projected life of an underground asset of 40 years. On Nov. 4, 2019, board resolution approved an intergovernmental agreement (IGA) between the Village and Elementary School District 97 (D97) allowing District 97 to share the use of a Village fiber optic cabling system for up to a 20 year term.

Current Status:

The fiber project was substantially completed in 2020 punch list work and final closeout will occur in 2023.

sing		

New program to provide an electric gear washer at station 3 and electric dryers at stations 1 and 3.

Justification:

Using a certified gear washer/extractor is the recommended procedure to clean turnout gear of cancer-causing chemicals and particulates. Using drying cabinets will increas out gear as well as getting the equipment back into service quicker as compared to letting it air dry in the sunlight.

Current Status:

This project has not been started and if approved should be completed in one year.

Fire Department Replacement Program of all Rescue/Extrication Tools (Jaws of Life). The tools are used for vehicle extrications and can be used in a variety of other rescue scenarios.

Justification:

Existing gas powered Rescue/Extrication tools have reached their service life and parts are no longer available due to the age of the equipment. The Fire Department is requesting to replace all tools over a four year period with battery operated tools. The current tools use a gas powered hydraulic pump that connects to the tool with a hose wich takes time to set up. The replacement tools are operated by battery and are self contained making them much more portable, easier to use and faster to deploy.

Current Status:

This project has been completed. 2020 purchase complete (1) Rescue/Extrication Tool is in service on T631. 2021 purchase complete (1) Replacement Rescue/Extrication Tool is in service on Engine 3. 2022 purchase (1) replacement set of tools for engine 602. 2023 purchase of tools for Engine 1 has been completed.

Project:	Fire Department Hose	General Priority Code: Climate Priority Code:	A None	General Category: Impact Areas(s):	Machinery and Equipment

Description:

Fire Department 2.5" and 1.75" Attack and 4" Supply Hose

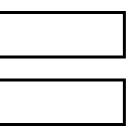

Justification:

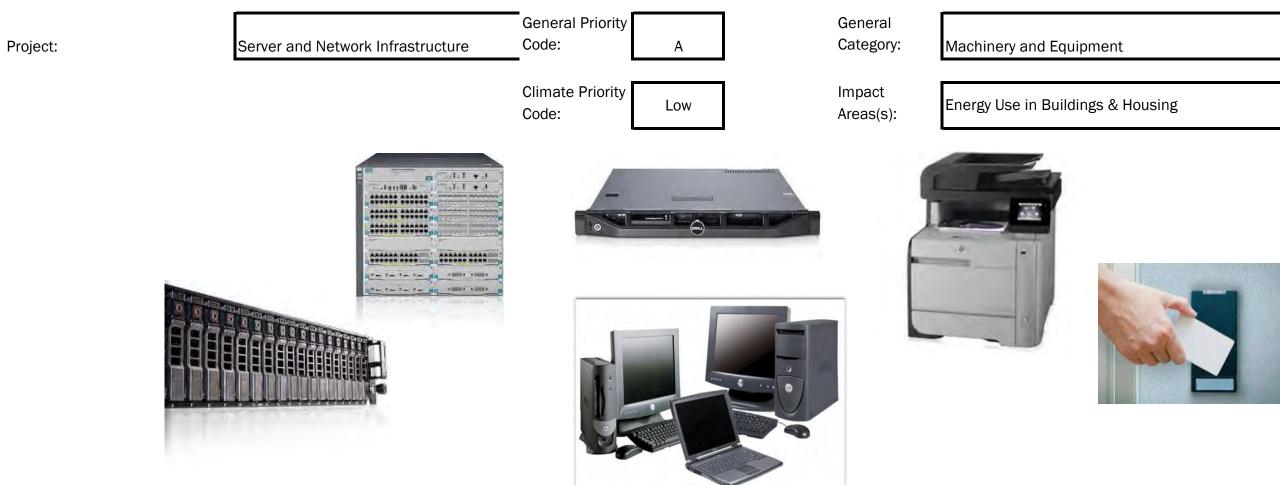

Firefighting hose typically lasts between 15 to 25 years. The last large purchase of hose was in 1998. Our supply of in service hose is now at the point that it needs to be replaced over the next three years

Current Status:

2022 order is complete 150 lengths of 2.5" hose were replaced. The 2023 order has been placed and are awaiting delivery of 30 Legths of 4" hose and 50 Legths of 1.75" hose.

Description:

This is an on-going project for the replacement of outdated or end-of-life computer, laptop, tablet, printer, server, storage, security and network equipment. The equipment are essential to support core operations and services, such as, file, database, print, email, application, web, security, communication, backup systems and end-user device. Equipment upgrades and relocating of services at time require additional electrical and data work.

Justification:

For 2024, the increased amount is primarily to replace 12 end-of-life Security Network Video Recorder (NVR) purchased in 2015 with 3 NVR's. In alignment with Village Climate Ready Oak Park Plan Goal ENO4, this will significantly reduce energy consumption and increase utilization of the fiber WAN by reducing equipment and consolidating the NVR's to 3 locations. All equipment purchases are generally distributed across multiple years. Equipment are replaced due to no longer meeting the Village's needs, such as, end-of-life, non-security compliance, nonstandard or non-functional. Average equipment lifespan for most equipment is 5 to 7 years.

Current Status:

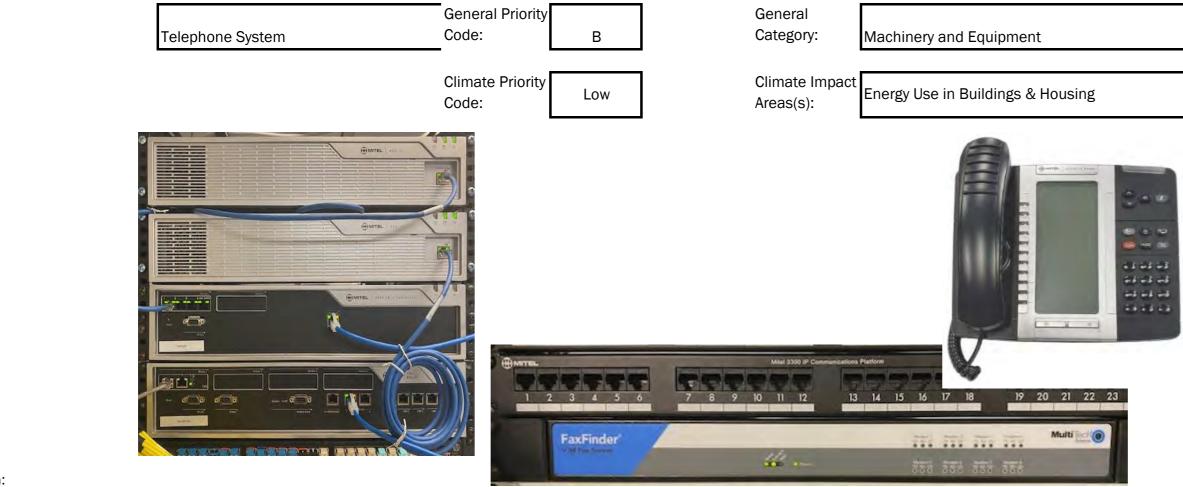

The equipment identified for replacement are outdated technology equipment, such as, PC's, printers, servers, storage and other end-user devices. In 2023, accounts 3029.41300.905.570720 (PC and Laptop Replacement) and 3029.41300.905.570294 - (Printer Replacement) were consolidated under this single account.

Description:

Project:

The telephone system is utilized for day-to-day operations at all facilities, remote and field work. Service includes desk phones, voice mail, auto-attendant, call center, mobile app, audio recording and fax/eFax.

Justification:

The current on-premise telephone system was from 2014 era and consists of many energy consuming hardware components and has multiple points of failure. In alignment with Village Climate Ready Oak Park Plan Goal ENO4 with a modern cloud-based system which significantly reduce power consumption on on-premise hardware controllers, replace end-of-life equipment, signficantly reduce downtime and signficantly reduce multiple points of failure. The cloud-based telephone system is now a well proven technology for reliability and performance that will improve customer experience, energy sustainability and continuity of operations. After 1st year of implementation, it is recommended expense be from IT Telephone Maintenance account 1001.41040.101.550672.

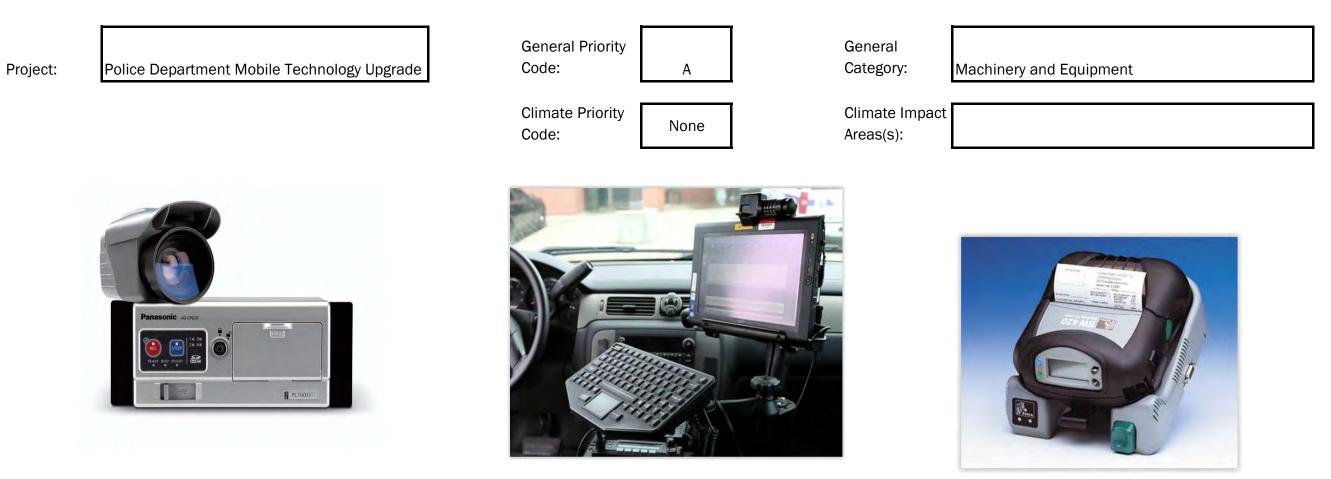

Current Status:

The current telephone system is from 2014 and is heavily dependent on many on-premise hardware components and network services. Maintenance and updates have become more difficult with increased service disruptions and downtime. Hardware component is approaching end-of-life February 2024. System is not well suited for mobile field and remote work operations.

Description:

Police mobile technology includes Mobile Data Computer (MDC), printer and in-car video equipment.

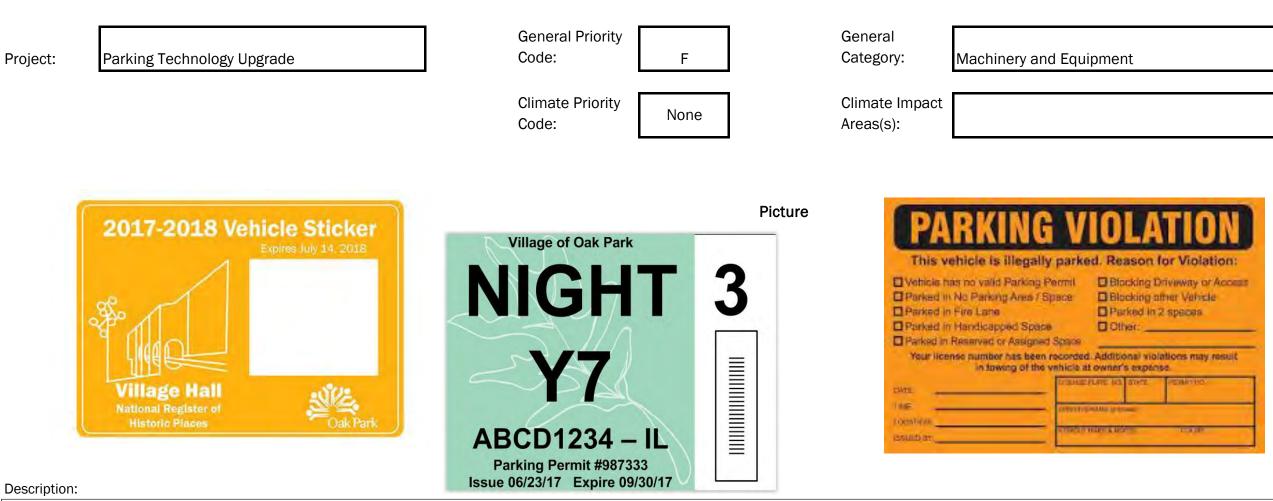

Justification:

This request is to replace several of the MDC equipment that are outdated or "end of life" status. The new equipment will provide a more reliable and responsive service in addition to more capabilities. The anticipated lifespan of the equipment is 4 years.

Current Status:

We continue to replace old MDC and printers through combined efforts of Police, IT and PW Fleet. Due to the increased need of quality in-car video, in 2022, the Police Department transitioned to AXON cameras, part of the system with body worn cameras.

Parking technology includes permit, vehicle registration, citation and in-car Automated License Plate Reconginition (ALPR) services and systems.

Justification:

The legacy 2004 system was replaced with a Unified Parking Solution system. As originally envisioned of going paperless and stickerless, additional License Plate Recognition (LPR) systems, printers and handheld devices are being added to meet these objectives.

Current Status:

A new Unified Parking Solution system was implemented in Q2-2019 for Parking Citation, Permits, Vehicle License and License Plate Recognition (LPR). As of 2021, there are four vehicles with LPR technology. Three handheld citation devices and printer sets to be utilized for emergency situation may be purchased in 2024.

Project:

Description:

RMS (Records Management System) is an agency wide system that provides for the storage, retrieval, retention, manipulation, archiving and viewing of information, records, documents, and files pertaining to law enforcement. It covers the entire life span of records development.

Justification:

The community safety consultant, Berry Dunn, found during their review of the Police Department's operations, that the current RMS system in use is not supporting the PD's operational needs. The recommendation from Berry Dunn is the Police Department should pursue acquisition of a more modern and robust RMS/CAD system that is capable of supporting its data needs.

Current Status:

The current system has multiple limitiations, including data entry and data mining, both of which are critical to leveraging data in support of operations and impartial policing. In 2023, WSCDC has taken on this project. They hired a Consultant, and we will get a new RMS system. In 2024, WSCDC plans to purchase and install the new RMS/CAD system. The PD will share in this cost, which is estimated to be \$2,000,000.

Machinery and Equipment

PARKING FUND #5060

EXECUTIVE SUMMARY

In densely populated Oak Park, with a population of 52,000 and an automobile population estimated at nearly 30,000, the limited supply of parking must be managed. The management of parking in the Village requires regulation about where and how parking is allowed, for how long and, in some cases, by whom. By managing the parking supply, most of which is on public property, the Village's Parking Services Department helps Oak Park residents and business owners meet their parking needs, while also maintaining the character of the community.

Parking Services manages publicly provided parking, four public parking garages, more than 100 off-street lots and nearly 1,500 meters. In addition, the department manages a comprehensive parking permit system that includes 3,600 quarterly, 24-hour parking permits, 2,300 quarterly on-street, overnight permits and some 2,500 permits for residents and their guests who request temporary on-street parking. The Parking Department also oversees the sale of Village Vehicle Stickers. Parking Services also reviews, researches and recommends the addition and revision of parking regulations within the Village as the staff liaison to the Transportation Commission.

Below is a revenue and expense table that illustrates the overall fund finances.

Priority Scale

A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A= Project complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes.

Medium= Designated as a medium priority due to potential carbon mitigation outcomes.

Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact.

None= Not included as a recommendation in Climate Ready Oak Park.

are located in the Holley Court, Lake & Forest, and Avenue Parking Garages. These stations are used every day and Parking and Mobility Services continually gets requests for additional stations. In 2019, five (5) stations (10 charge ports) were installed as part of the Village Hall lot resurfacing project (accounted for in the Village Hall Parking and Landscaping Improvements project sheet). Two (2) stations (4 charge ports) are for public use and three (3) stations (6 charge ports) are for Village fleet use. The Village to two (2) stations do use of two (2) existing charging stations (3) in Parking and Lot #10 in 2021. In 2022, these stations were upgraded to dual-ports. Two (2) additional dual-port stations were purchased and installed at The Avenue parking garage in 2022. As the need for EV Charging Stations grows, the installation of EV Charging Stations will be needed in parking lots and the public right-of-way throughout the Village.

Justification:

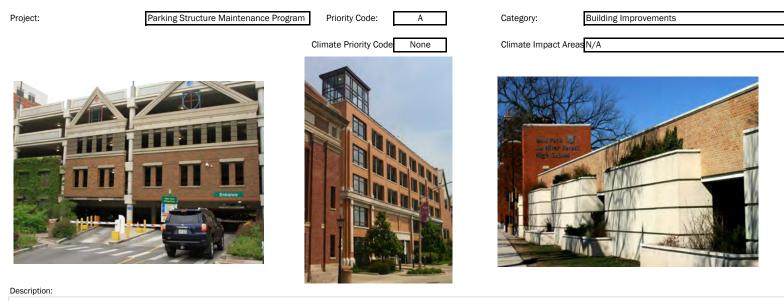

Charging stations provide a valued amenity for residents and visitors with electric or plug-in hybrid vehicles. This project aligns with Climate Ready Oak Park's goal to increase access to electric vehicle (EV) charging stations and parking, with an emphasis on improving access for residents who do not own a garage. Locations for the Village's electric vehicle charging stations are also selected based upon factors such as accessibility, traffic density, and proximity to existing transportation infrastructure. Expenditures earmarked for FY 24 - FY 25 are pursuant to the Village's application for the U.S. Department of Transportation's Charging and Fueling Infrastructure Discretionary Grant Program. This grant-funded project would result in the installation of thirty dual-port, power-sharing EV charging stations located in Village-owned surface parking lots and designated on-street public parking spaces. The Village has not yet received notice of award for this grant for 80% of project costs.

Current Status:

The Village is awaiting a notice of award from the U.S. Department of Transportation for the Charging and Fueling Infrastructure Discretionary Grant Program. If awarded, design work would be completed in FY 24 and construction would occur in FY 25 and FY 26. This grant would provide for the purchase and installation of thirty (30) level 2 dual-port electric vehicle charging stations at various locations throughout the Village. \$65,000 is budgeted in FY 28 to provide for the purchase and installation of additional stations.

Village of Oak Park Parking Fund Capital Project Sheet 2024 - 2028

The Village has several parking garage structures that it needs to maintain. Holley Court Garage was first built in 1984, with additions in 1986, 2005 and 2008. The Avenue Garage was built in 2002. OPRF High School Garage was built in 2003. A condition assessment of the parking structures was completed in 2017. Pursuant to that assessment, \$1,657,055.25 in repairs and improvements were completed at the three facilities during 2017 - 2021.

An updated condition assessment was conducted in 2022 to formulate a maintenance and repair program for five (5) years.

Justification:

An ongoing capital maintenance plan is needed to extend the useful life of the Village parking garage structures and address any building safety concerns.

Current Status:

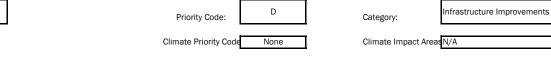

Eve en diture e

The Village conducted a competitive bid process in July 2023 for the immediate (2022), 2023, and 2024 repairs outlined in the five-year condition assessment of the three parking structures. The construction contract was awarded to the successful bidder in September 2023. Immediate (2022) repairs were completed in November 2023 and 2023-2024 repairs will be completed by November 2024. Repairs outlined in the condition assessment for FY 25 - FY 27 will be completed accordingly pursuant to a competitive bid process. An updated condition assessment will occur in FY 28 to formulate a maintenance and repair program for the next five (5) years.

Village of Oak Park Parking Fund Capital Project Sheet 2024 - 2028

Lot Resurfacing, Landscaping

and Maintenance Program

Description:

Project:

On-going resurfacing, landscaping and maintenance program of Village parking lots. When possible, the resurfacing is done in conjunction with the overall Village resurfacing program of streets and alleys.

Justification:

The Village owns or leases 94 parking lots. The Village has parking lot standards in the Village Code such as stormwater management, landscape areas, fencing, proper pavement and parking stall markings. The Village owned and leased parking lots follow these standards.

Current Status:

In 2023, the following lot improvement projects were completed: Lots SB5, SB6E, 29, 30, 66, 66N, 68, 100, 101, 109, 110, SB6 2024 Lot Improvements: Lots 54, 82, 83, 86, 97, 46D, 46E, 46F 2025 Lot Improvements: Lots 37, 72, 98, SB7, 74

The Village will conduct a study in 2025 to formulate a lot maintenance program for the next five (5) year period. \$300,000 is earmarked for lot improvements in FY 27 and FY 28, pending the results of the updated study.

	Total:	-	17,100	312,478	312,478	312,478	315,920	288,705	25,000	300,000	300,000

Parking Lot 10 is located between Marion Street and Forest Avenue north of the railroad viaduct. This project includes reconstructing the pavement of the off-street parking lot and installing a new permeable parking lot, replacing sidewalks along the north edge of the parking lot to improve accessibility, lighting improvements along North Boulevard, electrical improvements, landscaping improvements, and the resurfacing of North Boulevard from Marion to Forest. The proposed project will improve the space for pedestrians, users of the district, and create a space that can better accommodate special events. The Village received a MWRD grant for the installation of the permeable parking lot in the summer of 2023. The grant will fund approximately 40% of the costs for the permeable parking lot.

Justification:

The asphalt for Lot 10 is in need of resurfacing due to its condition. The sidewalks along the north side of Lot 10 are in need of replacement due to impacts from the mature trees, and the median island separating angled spaces along North Boulevard from the parking lot is in need of work and improvements for pedestrian access. Lighting improvements will generally complete lighting in DTOP. The Village received a MWRD grant to install a permeable parking lot here due to its sandy soils and in conformance with the Climate Action Plan.

Current Status:

The Village was awarded a MWRD grant for the permeable pavement portion of the project in the late summer of 2023. Per MWRD requirements design needs to be completed in 2023 with construction required to be completed in 2024. Design work is underway currently with construction planned for 2024.

Parking and Mobility Services manages roughly 1,500 on-street paid spaces. This system of on-street parking is currently comprised of 128 pay stations and 637 traditional coin parking meters. In addition to paying via a pay station or meter, all spaces are integrated with the Passport Parking application, allowing customers to pay for parking via their mobile device. Pay stations are necessary from an equity perspective to ensure that users with limited or no access to technology and/or electronic payment are still able to use public parking. The pay stations are solar-powered which allows for easy installation and, if necessary, moving them to a different location. The Village has a multi-year plan to convert the majority of the traditional coin parking meters to pay stations.

Justification:

Coin parking meters have limited capabilities. Pay stations allow for efficient use and management of the parking system. The estimated cost for a unit is \$10,000 and will cost roughly \$1,000 to maintain annually. Each paystation will cover 8-15 spaces depending on the particular configuration.

Current Status:

In 2016, the Village issued a Request for Proposals (RFP) for a consultant to help with the process of research, procurement and installation of parking technology. In 2017, the Village began and completed a pilot program testing 5 providers of parking pay station equipment. In 2019, the Village installed 28 pay stations using the selected provider from the pilot. 13 stations were installed in 2020 as part of the Lake Street streetscape project. Due to the downturn in parking revenue as a result of the pandemic, no stations were installed in 2021. 41 stations were installed in 2022. 28 stations are planned for in 2023 and 24 in 2024. In the event that additional pay stations are needed, a placeholder of \$30,000 was included for FY 25 - FY 27.

Fabrication and installation of new/revised Village-wide On-street regulation signs that will consolidate and create a more user friendly system to convey parking regulations to the public. Currently the Village has over 10,000 regulations signs.

Justification:

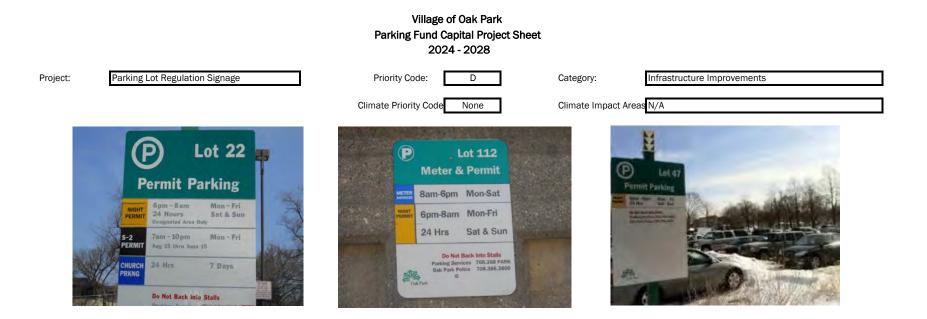

Wtih over 10,000 regulations signs there is a need to consolidate and potentially simplify the presentation of the Village's parking regulations. When completed, this updgrade will provide a better customer service experience for the residents and vistors of Oak Park.

Current Status:

Conversion of signage was originally planned to begin in 2020 and be complete by 2023, dependent upon recommendations from the Parking Pilot Program. Due to staffing changes and the pandemic, this program was delayed. A survey regarding the parking pilot program was conducted in Q3 and Q4 of 2021. Following analysis and recommendations from the Transportation Commission and Village Board, which is still ongoing, Village-wide conversion will be completed 2023-2025.

Fabrication and installation of a new/revised Village-wide Wayfinding System that will include the parking structures and off-street surface lots. The current system, installed in 2003, has over 600 signs and poles throughout the Villages 94 surface lots and 3 parking structures.

Justification:

As a culturally rich community with multiple areas of interest including business corridors, a robust parking wayfinding system for tourists, residents and workers is important. It has been determined that the current wayfinding system is ineffective and needs to be improved. This project includes improvements to occupancy count signs for the Village's parking garages.

Current Status:

This project was originally planned to begin in 2020 but has been delayed due to the COVID-19 public health emergency and the prioritization of other capital projects. The monument sign located at the Marion Street entrance to the Holley Court parking structure is planned to be replaced with an enhanced sign in Spring 2024. Design work for this sign would occur in 2023 and construction would occur in 2024, in conjunction with the Village's North Marion Street streetscape project. Additionally, Village staff intends to conduct an inventory and condition assessment of all parking lot signage in 2024. This inventory and assessment will be used to go out to bid for the fabrication and installation of updated signage over a two-year period (FY 24 - FY 25).

Village of Oak Park Parking Fund Capital Project Sheet 2024 - 2028

			-	-		
Project:	Revenue Control System	Priority Code: B	Cat	ategory:	Building Improvements	
		Climate Priority Code None	Clir	imate Impact Areas	N/A	

Description:

The Revenue and Access Control Systems at the Village's Holley Court and The Avenue parking structures is due for an upgrade. This project will provide for the necessary professional consulting services to determine the necessary technology needs to maximize the functionality of the two garages and the various customer types and parking programs administered by the Village. Furthermore, the project provides for the actual purchase of the necessary equipment as well as installation and configuration / setup fees.

Justification:

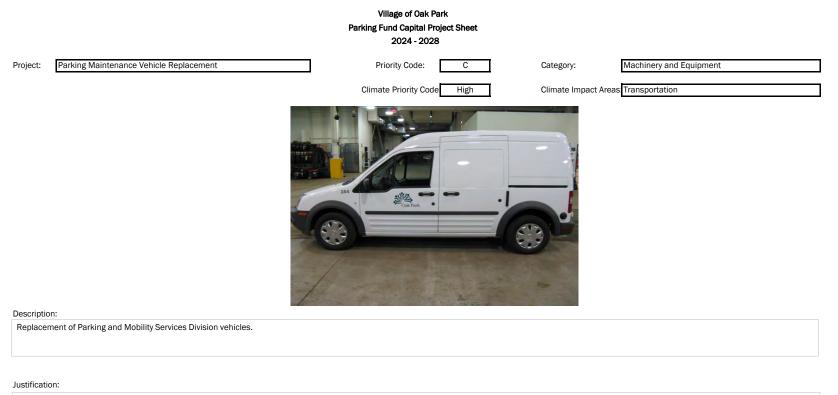

The Revenue and Access Control Systems at the Village's Holley Court and The Avenue parking structures was installed in 2015 and is due for an upgrade. An upgraded revenue and access control system will improve the efficiency of operations at both garages and improve customer satisfaction by reducing downtime and service interruptions due to equipment malfunctions.

Current Status:

Staff would engage the services of a parking technology consultant in FY 24 to assess the two facilities specific needs for revenue and access control systems. These services will culminate in the issuance of a formal bid package to solicit bids from technology companies for installation and configuration in FY 25. The Lake & Forest parking structure, which is co-owned by the Village and Vantage Apartments, is operated by a third-party garage operator, SP Plus. This facility has the same revneue and access control systems but was installed when the garage was constructed in 2016. Staff does not recommend a replacement of the revenue and access control systems at Lake & Forest garage at this time due to the shared ownership of this facility and the limited number of parking programs administered at this facility.

Vehicles are used for meter change collections and maintenance. Regular replacement will keep repair costs down and employees on the street. Vehicles are used for extended periods of time providing maintenance and repairs to the multiple parking locations around the village. The vehicles are run in constant stop and go as well as having excessive idle times to operate the attachments required for the various jobs required of these positions. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacement schedule: 2024 - 2011 Ford Van (\$65,000) NEW 2025 - 2014 Ford Van (\$65,000) NEW 2026 - No vehicles scheduled for replacement

2027 - One Admin Vehicle (\$60,000) 2028 - 2018 Ford Van (\$75,000)

Replacement or rebuilding of Public Works Department vehicles. This category does not include Public Works vehicles assigned to the Water & Sewer Division or Environmental Services Division.

Justification:

Equipment and vehicles that are past their cost effective lives and have exceeded the evaluation criteria for retention are a financial burden on the Village of Oak Park. The Department is proposing to rebuild vehicles, where cost effective, and wear has not been detrimental to the chassis or engine. As more services are being brought in house equipment will be used more than in the past. Newer equipment will help keep downtime to a minimum. Staff will evaluate the feasibility and opportunity to transition to full electric vehicles for every purchase. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TSO1 - Reduce Vehicle Emissions.

Current Status:

Replacement Schedule:

2024 - 2008 P/U w/plow (\$65,000), Three Updated spreader boxes for tandem axle trucks (\$55,000 each), 2002 Asphalt truck (\$300,000), 2005 Small loader (\$90,000).
 2025 - 2016&2017 Five Admin vehicles (\$38,000 each), 2005 Single axle dump truck w/chipper box w/plow, (\$200,000), 2005 Front end loader (\$350,000), 2005 Tandem axle dump truck w/chipper box w/plow (\$250,000), 1982 Air compressor trailer (\$30,000), sonow melter trailer (\$100,000 from PW \$100,000 from Parking Services)
 2026 - 2002 Semi Road Tractor (\$300,000), 2016 P/U w/plow (\$70,000), 2005 Small loader (\$95,000), 2005 Front End Loader (\$350,000)
 2027 - 2016&2017 Two Admin vehicles (\$40,000 each), 2003 Service truck (\$80,000), 2000 Large Aerial truck (\$350,000), 2005 Tree stumper (\$70,000), 2016 One ton truck w/plow (\$170,000), 2016 Multi purpose tractor (\$100,000), 2015&2012 P/U w/plow (\$70,000 each), 1999 Portable air compressor (\$35,000)
 2028 - 2000 Passenger van (\$60,000), Two 2016 P/U w/plow (\$70,000 each), Two Tanden Axle Dump trucks w/salter/plow (\$300,000 each), 2017 One ton truck w/plow (\$175,000)

Water & Sewer Fund #5040

Fund Summary

The Department of Public Works is responsible for the oversight and management of the Public Works portion of this Fund through its Water & Sewer Division. In FY 2013, the Village Board approved the collapse of the Water and Sewer Funds into a single fund.

Water Services – Public Works is responsible for the delivery of safe, potable water to residents and businesses within the Village and for fire suppression. Purchased directly from the City of Chicago, water is stored in several sites throughout the Village and pumped through 105 miles of water mains. Personnel and contractors supported by this fund are responsible for the emergency replacement of broken mains as well as repair and exercising of system water valves and fire hydrants, repair and replacement of water meters and pumping equipment. The division also responds to requests for locating underground water facilities via the one call system Joint Utility Locating Information for Excavators (JULIE). Revenues for the Water Fund are generated through the users of the water system through quarterly metering. Rates are determined based on the charges from the City of Chicago for the delivery of water and the Village's expenses and programming.

Sewer Services – Village sewage is transported to the interceptor sewers of the Metropolitan Water Reclamation District of Greater Chicago (MWDGC) where it is eventually treated and discharged into the receiving streams. Revenues for the Sewer fund are generated through the users of the water system as a portion of the utility charges. The Village does not pay the MWDGC for discharging to their sewers. Property owners are assessed on their property tax bill for this service. Although the current focus is on the actual infrastructure improvements it is not possible to have a valid conversation about the fund's ability to pay for the costs of projects without also discussing the other expenses of the fund. Below is a revenue and expense table that illustrates the overall fund finances.

A= Essential and Immediate Need

B= Essential, but may be delayed

C= Optional but beneficial to the Village through increased productivity, safety, etc.

D= Optional but beneficial to the Village in social, cultural or aesthetic ways

F= Future project, no 2024 expenditures

N/A=Project Complete, no 2024 or future expenditures

Priority Scale: Climate & Sustainability

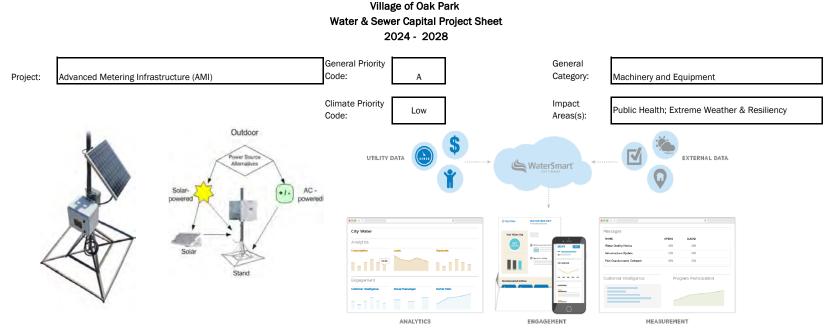

High= Designated as a high impact action due to potential carbon mitigation or equity outcomes.

Medium= Designated as a medium priority due to potential carbon mitigation outcomes.

Low= Recommended in Climate Raady Oak Park but no readily quantifiable carbon mitigation impact.

Priority Scale

None= Not included as a recommendation in Climate Ready Oak Park.

Description:

An Advanced Metering Infrastructure (AMI), also known as a Fixed Network, is defined as a metering system that records customer water consumption hourly or more frequently. This network provides for daily or more frequent transmittal of water measurements over a communication network to a central collection point. This project includes the installation of the AMI network (\$275,000) and a customer portal similar to the "Water Smart" Customer Web Portal (\$55,000).

Justification:

Many water utilities are migrating to AMI technology to gain the benefits of the advanced data stream. AMI provides increased customer service regarding water meter performance and near real-time data at the touch of your fingers. Data collection process will be increased by the ability to access Village wide readings from a single location. Reporting will also be improved to assist with management and planning. Customers will also have the ability to personally monitor their water meter and even receive emails due to leaks detected. This Network will allow the Village to see real time water loss or non-revenue water. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

This project was delay due to equipment delays in 2022 resulting in a carry forward of money allocated for this project. Currently in process organizing the logistics with The Village's IT department and installation of this network during the first quarter of 2023. The AMI Network should be completed by end of 2023 with a web portal being installed in 2024.

Description:

This project includes the 2019/2020 resurfacing of Austin Boulevard from Lake Street to North Avenue including the Village's water main project from Lake to Chicago along with the 2024 resurfacing of Austin Blvd. from Roosevelt to Lake including sever replacement primarily south of I-290. Austin Blvd is jointly owned by the City of Chicago and The Village of Oak Park with the Village owning the west half. The City resurfaced Austin from Lake to North Ave in 2019 and 2020 with the Village paying for its share. In 2024 the Village and City plan on resurfacing Austin from Roosevelt to Lake Street using Federal STP funds to pay for 80% of the eligible costs. There is needed sever replacement and rehabilitation primarily from Roosevelt to I-290 to be completed in 2024 in coordination with the future resurfacing project.

Justification:

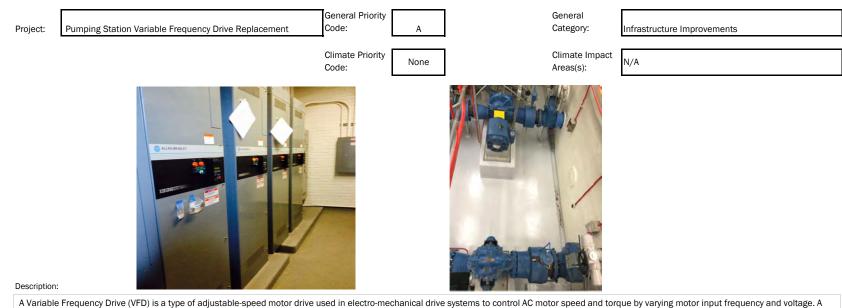

The Village's half of Austin Boulevard from Roosevelt to Lake Street was last resurfaced in 1999 and is in need of resurfacing. The combined sewer mains have been televised and based on their condition several sections of sewers will need to be replaced in conjunction with the resurfacing project, primarily south of I-290. The Village received Federal STP funds to pay for 80% of the costs for the resurfacing project from Roosevelt to Lake in 2024. The Village will be partnering with the City for this resurfacing project so the entire roadway width can be resurfaced at one time. Staff will pursue grant opportunities for installing green/environmental corridors in alignment with Climate Action Plan Goal CA03 to support native plantings and wildlife along Austin Boulevard.

Current Status:

The Village received \$1,082,400 in Federal STP funds for the resurfacing of Austin from Roosevelt to Lake St for 2024. The Village and City of Chicago entered into an IGA for the resurfacing project in 2024 to resurface the full width of the roadway with the City being the lead agency and overseeing the design and construction. The Village transferred the STP funds to the City for this project. The Village will reimburse the City for local costs using MFT and local CIP funds. The Village is still waiting for a final invoice from the City for the 2019 project.

A Variable Frequency Drive (VFD) is a type of adjustable-speed motor drive used in electro-mechanical drive systems to control AC motor speed and torque by varying motor input frequency and voltage. A VFD reduces energy consumption and energy costs ensuring optimal motor application speed. This project also includes pump replacement and rehabilitation. Work will occur at all three pumping stations. Work will also include replacement of pump mainline check valves.

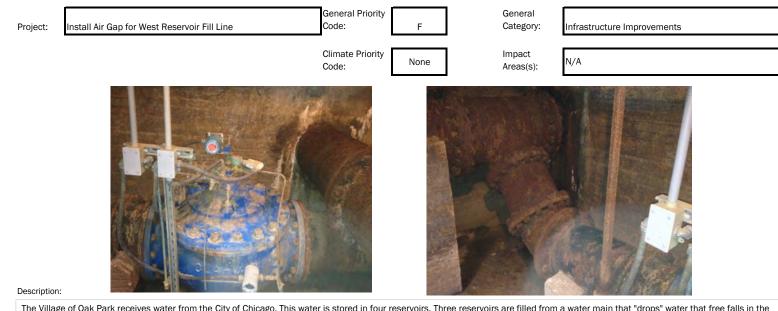

Justification:

Many fixed-speed motor load applications that supply direct current from AC line power can save energy when they are operated at variable speed by means of VFD. In addition the VFD increases system performance by eliminating pressure surges that can cause damage to the potable water infrastructure, resulting in costly repairs and system downtime. In 2018 staff completed an Energy Study for all three pumping stations which identified a scope of work that will provide a more efficient pumping system.

Current Status:

The Central Pump Station work is scheduled to be completed in the fall of 2023. The North and South Station construction contract was awarded in the summer of 2023 and will extend into 2024 due to long lead times for materials. In 2021 engineering work began on the design for the Central Pumping Station's VFDs and pump replacements.

The Village of Oak Park receives water from the City of Chicago. This water is stored in four reservoirs. Three reservoirs are filled from a water main that "drops" water that free falls in the reservoir also known as an air gap. Air gaps are considered the best backflow preventer back it does not have any moving parts.

Justification:

The City of Chicago in its new proposed water agreement with the Village of Oak Park has requested that all of our reservoirs be filled via an air gap. Currently, one reservoir, the West Reservoir at the Central Station (circa 1920s) is not filled by an air gap. It is filled by a water main that fills the reservoir about 1/3 of the way above the bottom of the reservoir. In order to comply with the City's request, the reservoir's supply water main would have to be re-routed upward, create an opening at the top of the reservoir for the water to freefall, and a structure would have to be built to house the piping and protect the reservoir's new opening. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DWO3 - Reduce Non-Revenue Water Loss.

Current Status:

Description:

This project includes the resurfacing of Division Street from Harlem Avenue to Austin Blvd. Division Street was last resurfaced in 2007. The Village programmed the use of State REBUILD Illinois funds (totaling \$3,418,965) for this project. Rebuild funds have been banked for 3 years for this 2023 project. This work was broken into two construction projects. A separate locally funded water and sewer project which includes sewer lining from Hayes to Humphrey to address structural issues, sewer replacement from Grove Avenue to Oak Park Avenue which was identified as a recommended project in the combined sewer master plan to address basement backups, and a new sewer main vest of Ridgeland to replace a deteriorated small diameter pipe. Water main replacement is from East Avenue to improve to improve fire flows in the area which was identified as a recommended project in the Village? Water System Master Plan Report.

Justification:

Division Street was last resurfaced in 2007 and was in need of resurfacing. Sewers being replaced are in failing condition. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

The water and sewer project was completed in late May. The resurfacing project was substantially completed in August with landscaping completed in the fall.

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority General Flood Mitigation Improvements- LeMoyne Code: Category: Project: N/A Infrastructure Improvements Climate Impact **Climate Priority** N/A None Code: Areas(s):

Description:

The Village's Combined Sewer System Master Plan Report identifies a number of larger relief sewer projects to improve the performance of the Village's combined sewer system which will reduce the frequency and severity of sewer backups into basements. Relief sewer projects are scored on a benefit-to-cost ratio in order to help prioritize these large improvements. This is the specific project-sheet for the Lemoyne Parkway relief sewer between East Ave and Edmer Ave to relieve undersized sewers on Fair Oaks, Elmwood, Rossell, and Edmer Avenues. The Village was awarded a MWRD grant for \$500,000 for this project.

Justification:

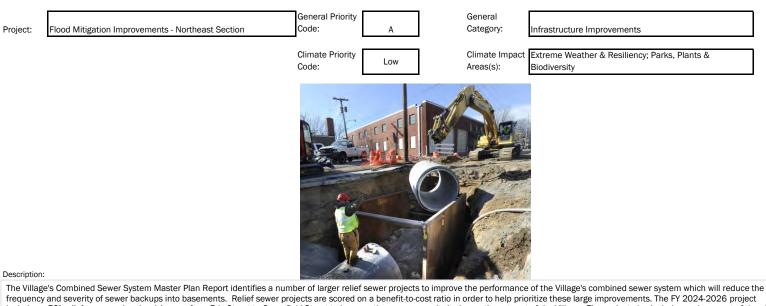

Relief sewer projects for flood mitigation will be included in future budgets especially when their construction can be coordinated with other projects to reduce cost or grant funding can be obtained.

Current Status:

The project was awarded in late fall of 2021. Work was completed in the summer of 2022 per plan. The Village Board approved a change order to the construction contract for revisions to the deep sewer connection and manholes. The Village received final reimbursement from MWRD in 2022 for the \$500,000 grant.

frequency and severity of sewer backups into basements. Relief sewer projects are scored on a benefit-to-cost ratio in order to help prioritize these large improvements. The FY 2024-2026 project includes a 72" relief sewer on Lombard Avenue from Erie Street to Greenfield Street to improve the sewer capacity in the north east part of the Village. The project also includes replacement of the old water main which will be needed with the construction as well as new water services and rebuilding the roadway from scratch.

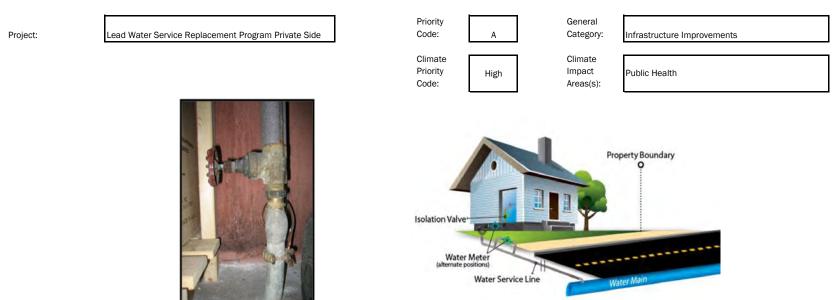

Justification:

Relief sewer projects for flood mitigation will be included in future budgets especially when their construction can be coordinated with other projects to reduce cost or grant funding can be obtained. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: GI02 - Installation of Storm Water Best Management Practices.

Current Status:

Design work is planned to start in 2024 for construction to start in 2025 and 2026. The Engineering Division will continue to also seek grants to fund this project.

Description:

New Illinois Public Act 102-0613 requires communities water suppliers to establish a program to remove lead water services (both public side and private side) from the water system over a period of time. In the Village water system there are approximately 8,500 water services that are either known to be lead or have unknown materials and assumed to be lead.

Justification:

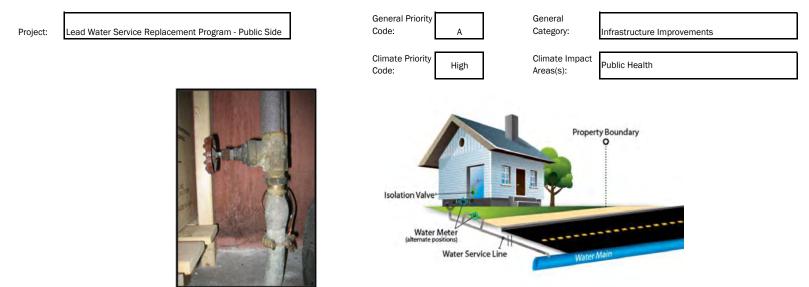

New Public Act 102-0613 is requiring communities water suppliers to submit their plans for a complete lead service line replacement plan by 2027. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW06 - Options for LSL replacement for low to moderate income residents.

Current Status:

The Village is currently reviewing ways to address the pending regulations regarding lead water service replacements as well as looking into funding options such as the State's low interest loans. This program is for the development of a program for the private side service using CDBG funds for eligible residents. The average cost of service line replacement on the private side is approximately \$9,000.

There are approximate 12,500 water service in the Village, approximately 8,500 of those have lead on the private side. Public Act 102-0613 requires the community water supplier to begin replacing Lead water services in 2027 and it requires the Village to complete 425 service per year. As Village policy states right now, the private side service (from the water meter in the house to the shut off valve in the parkway) is paid for by the property owner. If the Village choses to pay for the private side water service in 2027 the cost that would be associated with the required plan by Public Act 102-0613 is as followed; The Village would need to replace 425 services per year for 20 years at an estimated cost of \$9,000 per private side only. Total cost per year for the private side replacement would be \$3,825,000.

		Total:	35,323	-	50,000	100,000	100,000	50,000	50,000	50,000	50,000	50,000

Description:

This is an existing program (commonly called the Lead Abatement Program) where the Village works together with single family homeowner's who replace their private side (from the house to the shut off valve in the parkway) of the lead water service line with a new copper pipe. When the homeowner replaces the private side of the line, the Village will then replace the Public side(from the shutoff valve in the parkway to the Village watermain, which is usually in the street) lead water service line. The Village will do this water service line replacement and patch the street at no charge to the property owner. New Illinois Public Act 102-0613 requires communities water suppliers to establish a program to remove lead water service (both public side and private side) from the water system over a period of time. The act also requires if the lead service line is repaired due to an emergency leak on the public side that the community water supplier replace the service on the private side. In the Village water system there are approximately 8,500 water services that are either known to be lead or have unknown materials and assumed to be lead.

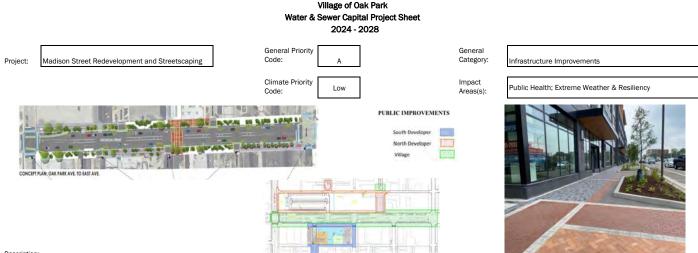

Justification:

This program has become more popular recently. Over the last six years Public Works Staff averaged replacing between 60– 70 service lines per year. When Village staff is completing this work, while important, they are not addressing other water or sewer system repairs. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW06 - Equitable and affordable full lead service line replacement program for low- and moderate-income residents.

Current Status:

This work is currently completed by Village and contractor crews. It is proposed to continue the program where most of this work can be completed by a contractor. The funding below could provide for approximately 30 service line replacements completed by a contractor for lead abatement program and 20 emergency service line replacements both Public & Private. Public Act 102-0613 requires the community water supplier to begin replacing Lead water services in 2027. Out of the approximate 10,000 water service that are lead, 6,000 of those have lead on the public side. Law requires the Village to complete 425 service per year. The Village's annual water main replacement averages approximately 100 public side service per year. That will require the program to address an additional 325 public side services in it's program. Average public side service with restorations will average around \$9,000. Final numbers per year would be 325 x \$9,000= \$2,925,000per/year plus the additional 30 services that will fall outside the Lead Service line replacement program.

Description:

The Village approved a Redevelopment Agreement in December of 2018 which includes the transfer of Village owned parcels at 700-728 Madison Street and right-of-way, the creation of a Pete's Fresh Market on the north side of Madison Street east of Oak Park Avenue, a senior living center on the south side of Madison, and for street resurfacing, streetscaping, and utility improvements on Madison from Oak Park Avenue to East Avenue. The Village previously completed conceptual streetscape designs and utility improvements that will be used as the basis of the design which will be refined and completed in coordination with the redevelopments' designs. Work includes street resurfacing, street lighting replacement, enhancements to the sidewalk and parkway areas, improved pedestrian crossings, and creating protected bike lanes. Redevelopment activities include utility relocation, environmental remediation, alley replacements, installations of cul de sacs, and miscellaneous site improvements.

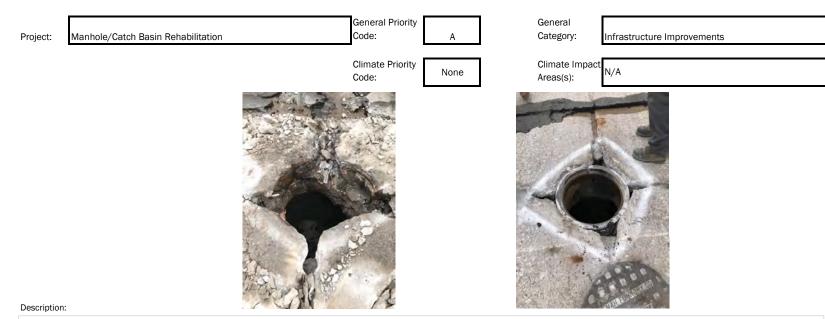

Justification:

This project is in alignment with the Village Board's plan for improvement of this corridor. To improve the safety and appearance of the Madison Street business district, encourage development, and replace deteriorating infrastructure. The project also aligns with Climate Action Plan Goals VT01-2 to address safer pedestrian crossings and reduce vehicle conflicts with cyclists and pedestrians. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

The Village approved the RDA in December of 2018. The Redico senior living center work was completed in the late summer of 2022. Pete's Fresh Market is currently having utility relocation work occurring with plans to start foundations in the fall of 2023 for an anticipated opening in the fall of 2024. The State approved the grant agreement for the \$1,250,000 in DCEO funds in the summer of 2023 and the State awarded an additional \$600,000 in DCEO funds for 2024 as part of the 2024 State Budget. The streetscape project was bid and scheduled for award in October 2023. The Village Streetscape project has a construction cost of \$7,124,631 and a construction management cost of \$512,926. Construction is planned for late 2023 and ending in October 2024. Costs for CIP Fund for Streetscape also include \$274,692 for Pete's reimbursement per RDA and \$203,682 for Redico reimbursement per approved agreement from June 2022.

The Village's sewer system includes over 100 miles of combined sewer pipe (storm and sanitary water using the same pipe). The system also includes approximately 2,000 manholes and 6,500 catch basins (also called curb drains). This project would begin an annual rehabilitation program for those manholes or catch basins that are in need of repair.

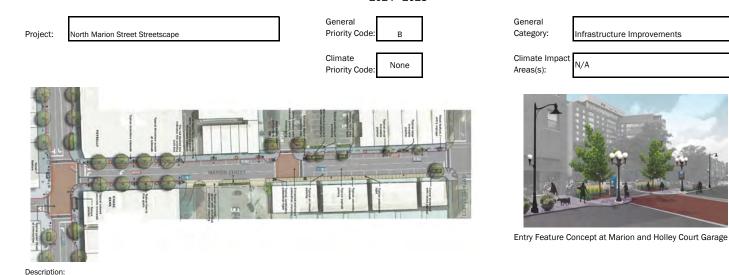

Justification:

Many of the manholes and catch basins in the system are decades old. Currently, staff is only able to make repairs when a manhole or catch basin has collapsed or failed. This program would allow staff to identify those structures that need repair or replacement and schedule the work prior to failure. This would improve the reliability of the system and manage risk.

Current Status:

This program has been derfered and will begin surveying Manholes & Catch basins and grading their structure's integrity in 2024. After completion of surveying, the Village will prioritize and began an annual rehabilitation program.

resurfacing, crosswalk enhancements by Holley Court, pedestrian improvements at Ontario, street furniture, and sewer improvements. The scope was reduced to eliminate bluestone north of Holley Court and the bank. Justification:

This project consists of installing streetscaping on the block of North Marion Street from Lake Street to Ontario Street to complete the last portion of DTOP along with sewer improvements to improve the capacity and reduce basement backups in portions of DTOP. The proposed scope includes new street and pedestrian lighting with outlets, traditional concrete sidewalks and curbs, asphalt

The streetscaping work was added to the design of the Lake Street Streetscape project by the Village Board in January of 2016. The construction of this one block was removed from the scope of the Lake Street project by the Village Board in 2017 to reduce the cost of the Lake Street project. Completing the streetscape on this block would complete the streetscape and unify the aesthetics for all of DTOP. Sewer improvements to interconnect two parallel sewers on Marion and extend a sewer south of the alley will improve capacity to buildings in DTOP.

Current Status:

Engineering design was completed in 2023 with the project scheduled to be bid in the late fall of 2023 for construction in 2024, pending Board approval.

Oak Park Avenue Resurfacing and Water & Sewer Imp.	General Priority Code:	N/A	General Category:	Infrastructure Improvements
	Climate Priority Code:	None	Climate Impact Areas(s):	N/A

Description:

This project includes the 2021 resurfacing of Oak Park Avenue from Roosevelt Road to North Avenue including water and sewer work. The Village received federal STP funds for 80% of the costs of the resurfacing project.

Justification:

Oak Park Avenue was last paved in 2004 and 2005 and was in need of resurfacing. Water and sewer improvements were completed in areas to replace deteriorated pipes and improve capacity. Work was completed in 2021.

Current Status:

The 2021 resurfacing and water and sewer project is complete and the Village is waiting for final invoicing from IDOT for the resurfacing project which was completed under budget.

188,620

478,596

Description:

This project is for the streetscaping and water and sewer improvements on Oak Park Avenue in the Hemingway District, generally from Randolph to Ontario. Construction is planned for 2025. The conceptual design of the streetscape is being determined in 2023 with final design occurring in 2024. The project includes full replacement of sidewalks and roadways, lighting, signal work, sewer main replacement for all of Oak Park Ave and water main north or the viaduct, and streetscaping elements. Construction costs for non sewer and water items will depend on the materials and amenities determined by the Village Board at the completion of the conceptual design process. Streetscape construction could vary between \$6M.\$13M based on the final design. Construction is planned for 2025.

Justification:

The business district was last streetscaped in 1984 and the existing pavements, lighting, and amenities are in deteriorated condition and can benefit from replacement in order to improve the aesthetics, make the area accessible, and to replace deteriorating infrastructure which will improve the business district. The streetscape project was originally scheduled for work in 2022 but was deferred due to COVID and to provide a break in construction for the businesses in the Hemingway District. Staff will pursue grant opportunities for installing permeable pavement on deteriorated roads marked for reconstruction in alignment with Climate Action Goal G103 to invest in green infrastructure and reduce the number of impervious surfaces in the Village.

Current Status:

The conceptual design is scheduled to be completed in the fall of 2023. Pending Village Board approval of design concepts, a contract for the detailed design of the project will be presented to the Board for work occurring in late 2023 and through most of 2024. Construction is planned for 2025 and will likely be broken down into multiple contracts for advanced procurement of long lead time items, water and sewer replacement work, and streetscaping work.

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority Code: Project: Permanent Generators at North and South Pumping Stations В General Category: Building Improvements **Climate Priority** Climate Impact N/A. None Code: Areas(s): ۲

Description:

A standby generator is a back-up electrical system that operates automatically. Within seconds of a utility outage an automatic transfer switch senses the power loss, commands the generator to start and then transfers the electrical load to the generator. The standby generator begins supplying power to the circuits. After utility power returns, the automatic transfer switch transfers the electrical load back to the utility and signals the standby generator to shut off. It then returns to standby mode where it awaits the next outage. This project is for the installation of permanent generators at the North and South pumping stations. Work also includes replacing 75 feet of 20" watermain coming out of the North station. The South pumping station will require constructing a steel structure to mount the generator on.

Justification:

The North and South pumping stations currently do not have permanent stand-by generators that would supply power in case of power failure. The Village does own a portable generator but it must be driven to the location and hooked up which could mean significant downtime of the station(s) affected. Stand-by generators at both locations would ensure timely delivery of potable water to residents and the business community during times of widespread power outages. Village staff investigated the feasibility of battery based backup power but do to the large loads and unknown duration of need for backup power, battery options are not feasible.

Current Status:

Generator design for the North Pumping Station started in late summer of 2023 with the construction contract anticipated to be presented to the Board for approval in late fall of 2023 or early 2024 for construction to occur in 2024. Design for the South Station is planned to start in 2024 for construction in 2025.

Current Status:

Since late 2016, staff worked with the Center for Neighborhood Technology (CNT) to design and administer this program. Applications are reviewed by the Neighborhood Services Division of the Development Customer Services Department and CNT performs site assessments and recommends projects to homeowners and performs post construction inspections. Applications for new grants stopped in 2020 due to COVID and projects that were already approved at the time were built in 2020 and 2021. No work occurred in 2022 due to lack of a consultant to oversee the grant program. There is currently a waitlist of applicants for the existing program. Staff will be re-evaluating this grant program to lower administrative costs and to look at additional opportunities for alignment with the Climate Action Plan.

Description:

This annual project consists of resurfacing and reconstructing local streets and resurfacing Village owned on-street and on-street parking lots when they are located on streets already being resurfaced. Generally construction of traffic calming items approved by the Board is also included as part of these projects.

Justification:

Local streets should be resurfaced every 15-20 years to maintain the deeper layers of asphalt, concrete or stone bases. Streets already deteriorated need to be reconstructed with deeper layers of asphalt or new base courses to restore their structural integrity. Staff will pursue grant opportunities for installing permeable pavement on deteriorated roads marked for reconstruction in alignment with Climate Action Goal GI03 to invest in green infrastructure and reduce the number of impervious surfaces in the Village.

Current Status:

The 2023 work included the installation of a new water main to improve water quality and fire flows on Pleasant Street from Lombard to Taylor as part of the 22-2 Resurfacing project and storm sewer installations and 7 sewer main repairs on streets being resurfaced as part of the 23-2 Resurfacing project.

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority General Code: Category: Project: Security Improvements at Pumping Stations **Building Improvements** F **Climate Priority** Climate Impact N/A None Code: Areas(s): ARKIN Description: This project involves upgrading the security at the three water pumping stations. Justification: Security improvements are made at the water pumping stations to improve the security from threats to the drinking water. Current Status:

In 2020 and 2021 a Risk & Resiliency Study and Emergency Response Plan were completed. The report was previously updated in 2003. The reports will need to be updated in 2026. Additional security improvements will be budgeted once they are identified.

Description:

The Sewer Backup Protection Grant Program was established in 2012 to provide financial assistance to homeowners who desire to protect their home from sewer backup during a heavy rain event. Eligible homeowners may qualify for a Grant of 50% of the total cost of sewer backup prevention improvements, up to a maximum of \$5,00.00, to install either an Overhead Sewer System or a Backflow Prevention Valve System.

Justification:

The program's intent is to offset a portion of the expense that a homeowner will incur to modify the building's plumbing system such that sewage cannot backflow into the building when the Village sewers are full. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: GI01 - Pursue opportunites for installation of high-quality green infrastrucutre on private lands.

Current Status:

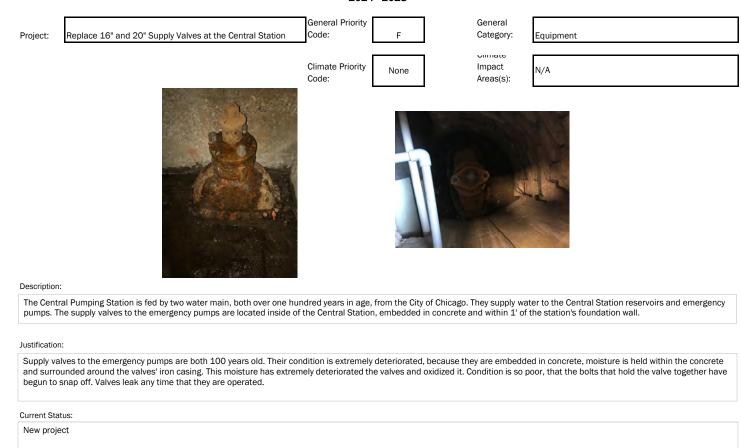

This is an ongoing program. Applications are reviewed by the Neighborhood Services Division of the Development Customer Services Department. The number of applicants varies from year to year and typically increases after major storms. To date, over 400 grants have been provided since the beginning of the program. The proposed funding will support approximately 60 grants.

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority General South Pumping Station Overflow Code: F Category: Reservoir Improvements Project: **Climate Priority Climate Impact** N/A None Code: Areas(s): Description: The Village's South Pumping Station is located at 207 Garfield just West of Lombard on Garfield. Village's water reservoir are inspected typical every 5 years per IEPA recommendation. Village's reservoirs were inspected in 2021 with recommendation on structure deterioration on the support braces for the overflow pipe at the south reservoir. Justification: Support braces have been deteriorating which causes additional strain the to the concrete wall on which the overflow is attached to. Left without additional support this will cause cracking in the concrete reservoir wall. This can lead to potential leaks. Current Status: This is a new Project. Amended Year End Actuals Budget Estimate Recommended Budget Budget FY 2021 FY 2022 FY 2023 FY 2023 FY 2023 FY 2024 FY 2025 FY 2026 FY 2027 **Funding Sources** Account Number Water/Sewer Operating Revenues 5040.43730.101.444401 150,000 Total: 150,000 --

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority General Code: F Category: Central Station (CPS) Roll-Off Generator Plug Pump Station Upgrades Project: Climate Impact **Climate Priority** N/A None Code: Areas(s): POWER

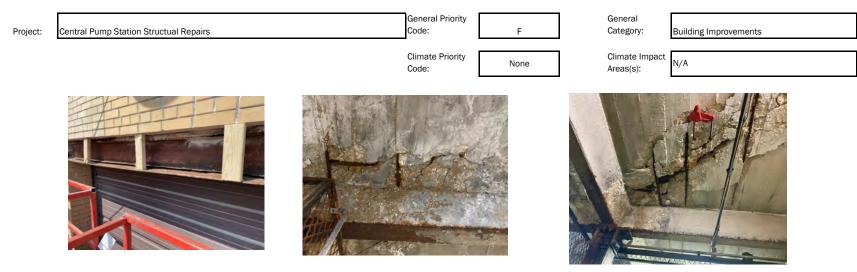

Description:

Install an electrical connection to be used to connect the Village's or any other mobile generator to the CPS for alternate power source. This connection or "plug" would be used whenever the CPS stationary generator is down for planned or emergency purposes.

Justification:

The CPS is the Village's primary pumping station; it is the only pumping station with the capability to provide water to the entire Village. It pumps 24/7 and delivers over 50% of the Village's water on a daily basis. If the CPS generator is out of service for planned or emergency purposes, there is no back-up power to the CPS and no way to appropriately hook up a mobile generator.

Current Status:

Description:

Central Pump Station is approximately 100 years old and is in need structual repairs to the cargo bay floor and an exterior I-beam that supports the brick facade. I-beam will be replaced in 2024 and cargo bay floor will be replaced in 2026.

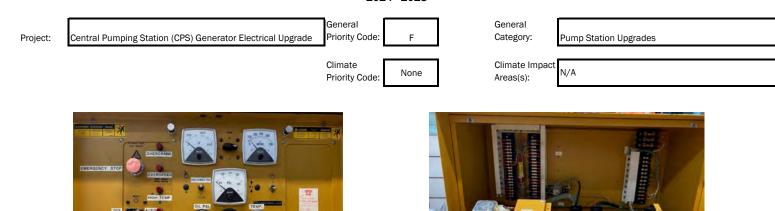

Justification:

The Central pump stations concrete cargo bay floor has experience significant cracking and is structually not safe. It was inspected by a structual engineering and his recommendation requires a replacement before complete failure. Temporary shoring will need to be installed. An exterior ibeam was found to have signialificant detoriation that will need replacement. This ibeam supports the exterior brick facade.

Current Status:

New project

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority General Water and Sewer Equipment Code: Category: Project: А Machinery and Equipment **Climate Priority** Climate Impact N/A None Code: Areas(s): Description: Various equipment is purchased for use by the Water and Sewer Division for sewer collection system, watermain distribution and water pumping stations. Equipment purchases include saws, watermain tapping equipment for water service installations, pipe tracing unit and other various equipment needs.

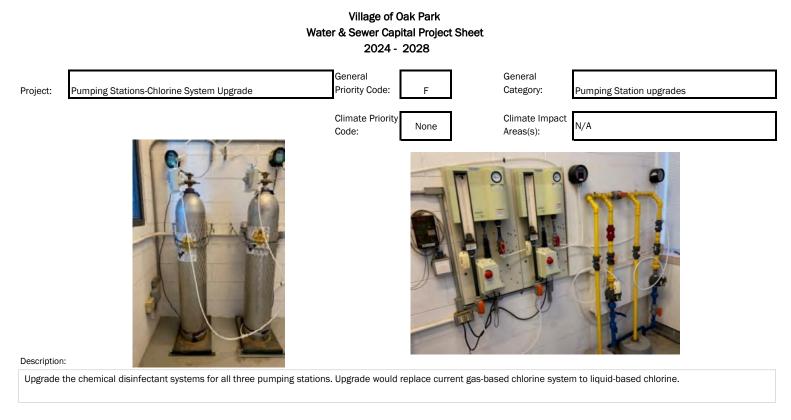

Justification:

Equipment is required for proper maintenance and safety of the Public Works staff. Generally the equipment is replacing old, worn out or obsolete existing equipment. 2024 increase is for Chlorine Analyzers and VFD's that have become obsolete and can't be serviced anymore.

Current Status:

Purchases are made annually as needed.

		Ac	tuals	Budget	Amended Budget	Year End Estimate		Recor	nmended Budge	et

Justification:

If exposed, gas chlorine can pose a significant hazard to employees, first responders, and the environment. Though infrequent, leak alarms can trigger full blown emergency responses from the Water and Fire departments and Haz-Mat team. This upgrade would mitigrate all of these concerns without diminishing the capability to provide safe drinking water.

Current Status:

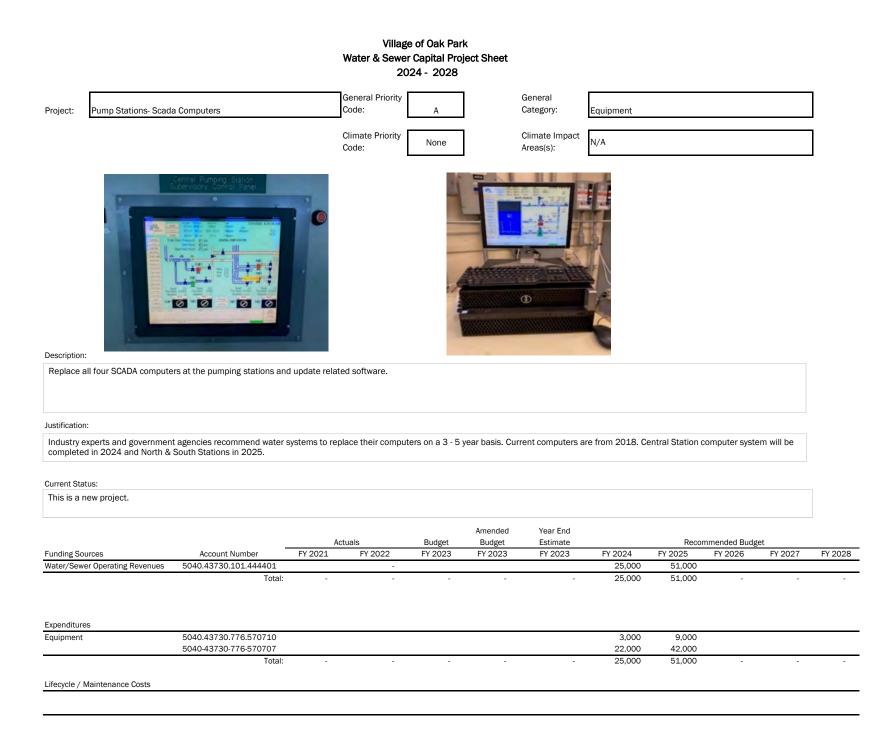

This is a new Project.

due to the amount of pavement damage caused by trenching. Locations for sewer replacement are determined from sewer inspections and recommendations for replacement from the sewer modeling study. Water main replacement is based off of break history, fire flow modeling and to coordinate with other improvements. The funding also includes surveying and engineering. This is the general project-sheet for the water and sewer improvement projects which shows budgeting for 2024 to 2027 while the current year and next year's projects are shown in specific project-sheets.

Justification:

The water and sewer systems in Oak Park date back to the late 1800's with an average age of around 70 years old for water and 82 years old for sewer. These old systems require continual inspections, rehabilitations and replacements in order to provide reliable service. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

Projects are designed and constructed annually. Design for 2024 projects will be done in 2023 using consultants. Design costs for 2024 projects are shown on individual sheets.

Village of Oak Park Water & Sewer Capital Project Sheet 2024 - 2028 General Priority Code: Project: 2024 Sewer Main Improvements - Ontario and Woodbine Lining А General Category: Infrastructure Improvements Climate Priority Climate Impact N/A None Code: Areas(s): Description:

This project includes the rehabilitation of the existing sewers using a trenchless liner on Ontario from East Ave to Scoville and on Woodbine from Division to Berkshire to address deteriorated conditions and ensure the long term stability of these sewers. The sewer on Ontario is underneath OPRF and lining the sewer is a preventative miniatous project to ensure the pipe does not fail since it is under the school. The sewer on Woodbine is under a park and lining is the best method to address failing conditions found during televising inspections without impacting the adjacent school and park.

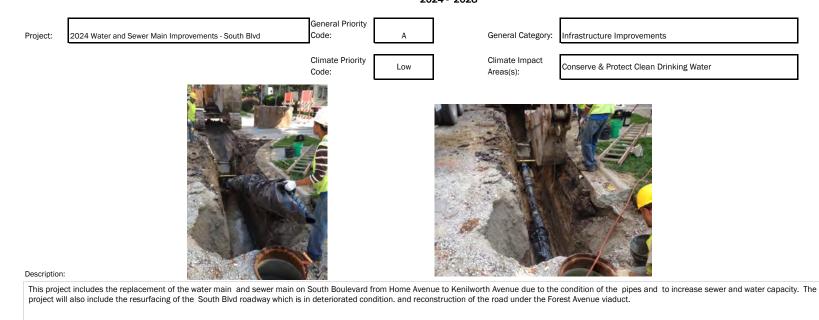

Justification:

The water and sewer systems in Oak Park date back to the late 1800's with an average age of around 70 years old for water and 82 years old for sewer. These old systems require continual inspections, rehabilitations and replacements in order to provide reliable service. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

The design of the project will be completed in 2023 for 2024 construction.

Justification:

The existing 9" combined sewer is in bad condition and is undersized. The existing 6" water main will be replaced with a 12" water main to improve fire flow to the commercial area s in the Pleasant District and DTOP. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DWO3 - Reduce Non-Revenue Water Loss.

Current Status:

The design of the project is nearly complete. The construction of this project was deferred until 2024 to allow for better coordination with the adjacent business districts due to road closures on South and North Blvd.

2024 - 2028

This project includes the replacement of the water main on Augusta Boulevard from approximately Lombard to Austin due to multiple water main breaks. as well as spot sewer improvements between Humphrey and Austin and near Hayes and include resurfacing the roadway.

Justification:

The water and sewer systems in Oak Park date back to the late 1800's with an average age of around 70 years old for water and 82 years old for sewer. These old systems require continual inspections, rehabilitations and replacements in order to provide reliable service. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

The project is scheduled to be completed in the fall of 2023. Additional work was added to the project to include new sewer on Augusta from Hayes to Taylor to reduce the likelihood and severity of sewer backups on Hayes.

Replacement of Public Works Water and Sewer Division vehicles.

Justification:

The current equipment has been well used and is getting near the end of its useful life. The trade-in/resale will be impacted the longer it is in use. In order to operate most efficiently, newer, less worn efficient pieces of equipment are needed to keep the Water and Sewer Division the most productive it can be. Rebuilding or refurbishing will be considered when appropriate. Electric, hybrid, and alternative fueled equipment will be evaluated for usage as technology evolves. Staff will present the Board with the possible option and cost in alignment with the Village Climate Ready Oak Park Plan Goal: TS01 - Reduce Vehicle Emissions.

Current Status:

Replacement Schedule:

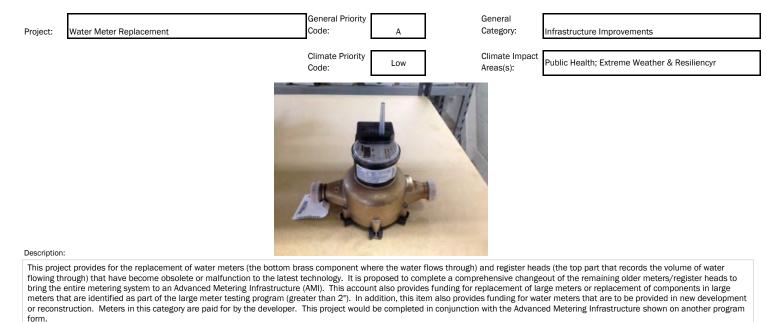

2024 - 2016 Hybrid Fusion Admin car (\$36,000), 2012 Rebuild Tandem axle dump truck w/ plow (\$125,000), 2012 Ford P/U w/plow (\$65,000), 2013 F550 Service truck (\$150,000), 2007 Rebuild Single axle dump w/plow& salter (\$150,000), Add custom shoring trailer to improve dig job safety (\$12,000)

2025 - 1999 Portable air compressor (\$30,000), 2015 Backhoe (\$275,000), 2012 Rebuild Tandem axle dump truck w/ plow (\$150,000)

- 2026 2007 Sewer jetter (\$550,000)
- 2027 2019 Meter reader vehicle (\$40,000), 2016 Utility truck (\$180,000)
- 2028 2019 Transit Connect mini van (\$50,000)

2024 - 2028

Justification:

The Village maintains approximately 12,500 water meters serving its customers. Water meters and register heads can become inoperable or malfunction over time thus providing inaccurate readings, usually reading less than is actually going through the meter. It is imperative to maintain an accurate system of meter reading since this is the driver of the revenue for the fund and is one of the reasons for water loss. Meters are read monthly for commercial customers and quarterly for residential customers. Meters have an expected life of 15-20 years for accuracy purposes. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

There is a carryforward of \$98,000 due to delay in shipping. of meters that were part the meter replacement program. This programs focus is on testing/replacing larger water meters and failed residential meters.

Project:	Water Distribution Leak Detection	General Priority Code:	A	General Category:	Machinery and Equipment
		Climate Priority Code:	Low	Climate Impact Areas(s):	Public Health; Extreme Weather & Resiliency
		Tarata and an analysis and and analysis and and analysis and and analysis and and and and and and and and and and			

Description:

Data Loggers are a type of device that can help with Non-revenue water loss. These devices help in finding un-known leaks that do not surface throughout the distribution system. They are sensors that listen to noise throughout the pipe and check for abnormalities.

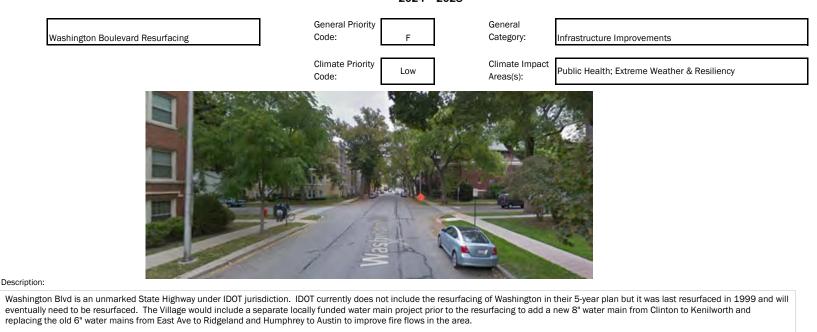

Justification:

Illinois Department of Natural Resources (IDNR) requires that Community Water Systems to have a non-revenue water (NRW) loss below 10%. If the Village goes above 10% NRW the Village is require to present a plan to IDNR to reduce the water loss. The Village's Non-revenue water loss is approximately 20% and this technology can help in reducing the NRW. This technology helps locate and detect leaks that go undetected. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

Project has an carry forward from 2022 of \$500,000. The pilot program was installed in April 2023. Effectiveness of the dataloggers and cost will be re-evaluated at that point to determine if full implementation is warranted. After full implementation there will need to be support services and a battery replacement (2028).

					220 of 223						

Justification:

Washington Boulevard was last resurfaced in 1999 and will eventually need to be resurfaced. There is planned water main improvements on Washington that would be best constructed in coordination with any IDOT resurfacing project to save costs for restoring the roadway. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

The project is currently shown for design in 2026 and construction in 2027. Future Capital Improvement Plans will be updated once staff gets better information from IDOT on any schedule for their resurfacing of Washington Blvd.

	Total:	-	-	-	-	-	-	-	150,000	2,000,000	-

Justification:

Fully operable water main valves allow for the isolation of the smallest section possible of the distribution system in the event of a water main break. Valves stuck in the closed position can create areas of poor fire flows and lower drinking water quality. This project is in alignment with the Village Climate Ready Oak Park Plan Goal: DW03 - Reduce Non-Revenue Water Loss.

Current Status:

This is an ongoing program that is prioritized based on size and need. The Village's Water & Sewer Department finds many valves that are broken close or inoperable due to their age. The 2022 project was awarded in July of 2022 and was completed in 2023 due to long lead times for large valves.

Project:	Central Pumping Station PLC Upgrade	General Priority Code:	N/A	General Category:	Infrastructure Improvements
		Climate Priority Code:	None	Climate Impact Areas(s):	N/A

Description:

Work consists of replacement of current Programmable Logic Controller (PLC) and enclosure. Work includes parts and labor to install and program equipment.

Justification:

Current PLC is obsolete and discontinued by Manufacturer. Replacement parts are scarce and can only be found at premium costs on online purchasing websites, such as eBay and Amazon; moreover, majority of parts found on these websites are refurbished and integrity cannot be confirmed. Current enclosure is too small for the equipment it houses, servicing equipment in current enclosure has proven to be very difficult.

Current Status:

New PLC is will not be compatible with the current Variable Frequency Drives (VFD) upgrades being done this year. Work must be completed after VFD installation 2023
